Manufacturing Ideology Scientific Management In Twentieth Century Japan:

Manufacturing Ideology William M. Tsutsui, 2001-03-12 Japanese industry is the envy of the world for its efficient and humane management practices Yet as William Tsutsui argues the origins and implications of Japanese style management are poorly understood Contrary to widespread belief Japan's acclaimed strategies are not particularly novel or even especially Japanese Tsutsui traces the roots of these practices to Scientific Management or Taylorism an American concept that arrived in Japan at the turn of the century During subsequent decades this imported model was embraced and ultimately transformed in Japan's industrial workshops Imitation gave rise to innovation as Japanese managers sought a revised Taylorism that combined mechanistic efficiency with respect for the humanity of labor Tsutsui's groundbreaking study charts Taylorism's Japanese incarnation from the efficiency movement of the 1920s through Depression era rationalization and wartime mobilization up to postwar productivity drives and quality control campaigns Taylorism became more than a management tool its spread beyond the factory was a potent intellectual template in debates over economic growth social policy and political authority in modern Japan Tsutsui's historical and comparative perspectives reveal the centrality of Japanese Taylorism to ongoing discussions of Japan's government industry relations and the evolution of Fordist mass production He compels us to rethink what implications Japanese style management has for Western industries as well as the future of Japan itself

Scientism and Technocracy in the Twentieth Century Richard G. Olson, 2015-12-16 Scientism or the application of methods attitudes and concepts drawn from the natural sciences to human activities and social policy formation is a pervasive feature of modern life and it is one which has immense impact upon virtually all aspects of our private and public lives This work explores the impact of Scientific Management a movement initiated at the beginning of the twentieth century by the mechanical engineer Frederick Winslow Taylor in spreading scientistic attitudes through its appropriation by technical experts technocrats who have played a central and growing role in formulating public policies not just in the United States but throughout the world It explores the movement of Scientific Management out of its initial American industrial context into progressive politics in the United States into the policies of the Third Reich those of the Soviet Union under Lenin and Stalin into Cold War policy formation in both the U S and the U S S R and into those of

contemporary China and the European Union with short but important excursions into France Sweden Japan and the developing world Moreover it also explores some of the aesthetic dimensions of scientism and technocracy especially as they have been reflected in modernist architecture and literature and it examines current trends in education and the structure of advisory organizations such as RAND Corporation which are shaping the character and impact of scientific and technocratic attitudes Overall the approach is ambivalent toward scientism acknowledging some of its great strengths in promoting economic growth and providing advice on security related issues but offering criticisms of its narrow emphasis on efficiency its insensitivity to qualitative considerations and the experience of those with specialized local knowledge and its long term tendency to ignore distributive justice and promote income concentration
