Manufacturing IV Justyna Trojanowska, Agnieszka Kujawińska, Ivan Pavlenko, Jozef Husar, 2024-03-29 This book describes cutting edge research and technologies aimed at increasing the efficiency of production processes and supporting the implementation of Industry 4.0 and Industry 5.0 solutions in production. Gathering peer review contributions to the 8th International Scientific Technical Conference MANUFACTURING 2024 held on May 14-16, 2024 in Poznan, Poland, it reports on research on and applications of artificial intelligence and digital technologies to improve the production process. It also presents augmented virtual and mixed reality tools that can be used or have been tested in the manufacturing industry and for education and training purposes. Last but not least, it highlights cutting edge solutions for green and sustainable production. Offering a timely practice oriented reference guide for both researchers and practitioners in manufacturing, this book is also intended to bridge the gap between university and industry, fostering a closer communication and cooperation between them.

Practice of Petri Nets in Manufacturing F. Dicesare, George Harhalakis, Jean-Marie Proth, Manuel Silva-Suarez, F. Vernadat, 2012-12-06 M. Silva Significant changes have been occurring in industrialized countries since the Second World War. Production is moving towards sophisticated high quality products. Economy of scale has been replaced by economy of scope. Jerky demands are progressively replacing steady demands and competitiveness is becoming a worldwide phenomenon. These trends require highly automated manufacturing systems with small set up times and high flexibility. As a consequence, implementation and running costs of modern manufacturing systems are drastically increasing, whereas their fields of application remain limited and every day become even narrower, which increases the risk of early obsolescence. This is the reason why designers are trying to improve the preliminary design phase, also known as the paper study phase. The preliminary design phase includes but is not limited to the functional specification and the evaluation of the system. Many tools exist to support the functional specification of manufacturing systems. IDEF0 is one of these tools. It leads, using a top down approach, to a precise functional description of the required system. However, its use cannot be extended further. In general, the evaluation starts with a modeling step which depends on the evaluation tool used and ends by applying the model to find out its main dynamic characteristics. Two main approaches can be used to perform this task, namely simulation and mathematical approach. Using simulation, the modeling tool is either a classical computer language or a simulation language.

Computer-Aided Design, Engineering, and Manufacturing Cornelius T. Leondes, 2000-12-12 In the competitive business arena, companies must continually strive to create new and better products faster, more efficiently, and more cost effectively than their competitors to gain and keep the competitive advantage. Computer aided design (CAD), computer aided engineering (CAE), and computer aided manufacturing (CAM) are now the industry standard. These seven volumes give the reader a comprehensive treatment of the techniques and applications of CAD, CAE, and CAM.
