Sheet Metal Forming R. Pearce, 1991-12-31. The pressing of sheet metal into useful shapes is a technology which requires an understanding of a wide range of subjects. This text is divided into three sections: processes, materials and tests. In Part 1, sheet metal forming is examined mainly from a mechanical engineering viewpoint: firstly plasticity and anisotropy, then process variables: friction, lubrication and temperature, and finally practical aspects of forming in the press shop. Part 2 deals with the main sheet alloys at varying lengths depending on their industrial popularity. Certain research results showing the fallibility of the phenomenological approach are also highlighted. A section of testing procedures concludes the volume.
