   Many Valued Topology and its Applications Ulrich Höhle,2001-04-30 The 20th Century brought the rise of General Topology It arose from the effort to establish a solid base for Analysis and it is intimately related to the success of set theory Many Valued Topology and Its Applications seeks to extend the field by taking the monadic axioms of general topology seriously and continuing the theory of topological spaces as topological space objects within an almost completely ordered monad in a given base category C The richness of this theory is shown by the fundamental fact that the category of topological space objects in a complete and cocomplete epi extremal mono category C is topological over C in the sense of J Adamek H Herrlich and G E Strecker Moreover a careful categorical study of the most important topological notions and concepts is given e g density closedness of extremal subobjects Hausdorff s separation axiom regularity and compactness An interpretation of these structures not only by the ordinary filter monad but also by many valued filter monads underlines the richness of the explained theory and gives rise to new concrete concepts of topological spaces so called many valued topological spaces Hence many valued topological spaces play a significant role in various fields of mathematics e g in the theory of locales convergence spaces stochastic processes and smooth Borel probability measures In its first part the book develops the necessary categorical basis for general topology In the second part the previously given categorical concepts are applied to monadic settings determined by many valued filter monads The third part comprises various applications of many valued topologies to probability theory and statistics as well as to non classical model theory These applications illustrate the significance of many valued topology for further research work in these important fields   **Many Valued Topology and its Applications** Ulrich Höhle,2011-06-28 The 20th Century brought the rise of General Topology It arose from the effort to establish a solid base for Analysis and it is intimately related to the success of set theory Many Valued Topology and Its Applications seeks to extend the field by taking the monadic axioms of general topology seriously and continuing the theory of topological spaces as topological space objects within an almost completely ordered monad in a given base category C The richness of this theory is shown by the fundamental fact that the category of topological space objects in a complete and cocomplete epi extremal mono category C is topological over C in the sense of J Adamek H Herrlich and G E Strecker Moreover a careful categorical study of the most important topological notions and concepts is given e g density closedness of extremal subobjects Hausdorff s separation axiom regularity and compactness An interpretation of these structures not only by the ordinary filter monad but also by many valued filter monads underlines the richness of the explained theory and gives rise to new concrete concepts of topological spaces so called many valued topological spaces Hence many valued topological spaces play a significant role in various fields of mathematics e g in the theory of locales convergence spaces stochastic processes and smooth Borel probability measures In its first part the book develops the necessary categorical basis for general topology In the second part the previously given categorical concepts are applied to

monadic settings determined by many valued filter monads The third part comprises various applications of many valued topologies to probability theory and statistics as well as to non classical model theory These applications illustrate the significance of many valued topology for further research work in these important fields **Fuzzy Logic and Mathematics** Radim Bělohlávek,Joseph W. Dauben,George J. Klir,2017 The main part of the book is a comprehensive overview of the development of fuzzy logic and its applications in various areas of human affair since its genesis in the mid 1960s This overview is then employed for assessing the significance of fuzzy logic and mathematics based on fuzzy logic **Monoidal Topology** Dirk Hofmann,Gavin J. Seal,Walter Tholen,2014-07-31 Monoidal Topology describes an active research area that after various past proposals on how to axiomatize spaces in terms of convergence began to emerge at the beginning of the millennium It combines Barr s relational presentation of topological spaces in terms of ultrafilter convergence with Lawvere s interpretation of metric spaces as small categories enriched over the extended real half line Hence equipped with a quantale V replacing the reals and a monad T replacing the ultrafilter monad laxly extended from set maps to V valued relations the book develops a categorical theory of T V algebras that is inspired simultaneously by its metric and topological roots The book highlights in particular the distinguished role of equationally defined structures within the given lax algebraic context and presents numerous new results ranging from topology and approach theory to domain theory All the necessary pre requisites in order and category theory are presented in the book **Information Processing and Management of Uncertainty in Knowledge-Based Systems** Joao Paulo Carvalho,Marie-Jeanne Lesot,Uzay Kaymak,Susana Vieira,Bernadette Bouchon-Meunier,Ronald R. Yager,2016-06-10 This two volume set CCIS 610 and 611 constitute the proceedings of the 16th International Conference on Information processing and Management of Uncertainty in Knowledge Based Systems IPMU 2016 held in Eindhoven The Netherlands in June 2016 The 127 revised full papers presented together with four invited talks were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on fuzzy measures and integrals uncertainty quantification with imprecise probability textual data processing belief functions theory and its applications graphical models fuzzy implications functions applications in medicine and bioinformatics real world applications soft computing for image processing clustering fuzzy logic formal concept analysis and rough sets graded and many valued modal logics imperfect databases multiple criteria decision methods argumentation and belief revision databases and information systems conceptual aspects of data aggregation and complex data fusion fuzzy sets and fuzzy logic decision support comparison measures machine learning social data processing temporal data processing aggregation **General Topology III** A. V. Arhangel' skii,2013-03-09 The problem of metrization of topological spaces has had an enormous influence on the development of general topology Singling out the basic topo logical components of metrizability has determined the main reference points in the construction of the classification of topological spaces These are pri marily paracompactness collectionwise normality monotonic normality and perfect normality the concepts of a

stratifiable space Moore space and u space point countable base and uniform base The method of covers has taken up a leading role in this classification Of paramount significance in the applications of this method have been the properties of covers relating to the character of their elements open covers closed covers the mutual dispo sition of these elements star finite point finite locally finite covers etc as well as the relations of refinement between covers simple refinement refine ment with closure combinatorial refinement star and strong star refinement On this basis a hierarchy of properties of paracompactness type has been sin gled out together with the classes of spaces corresponding to them the most important of which is the class of paracompacta The behaviour of families of covers with respect to the topology of a space has important significance Here first and foremost is the notion of a refining family of covers a development which appears in several modifications and together with the notion of paracompactness plays a key role in metrization problems On Logical, Algebraic, and Probabilistic Aspects of Fuzzy Set Theory Susanne Saminger-Platz,Radko Mesiar,2016-01-11 The book is a collection of contributions by leading experts developed around traditional themes discussed at the annual Linz Seminars on Fuzzy Set Theory The different chapters have been written by former PhD students colleagues co authors and friends of Peter Klement a leading researcher and the organizer of the Linz Seminars on Fuzzy Set Theory The book also includes advanced findings on topics inspired by Klement s research activities concerning copulas measures and integrals as well as aggregation problems Some of the chapters reflect personal views and controversial aspects of traditional topics while others deal with deep mathematical theories such as the algebraic and logical foundations of fuzzy set theory and fuzzy logic Originally thought as an homage to Peter Klement the book also represents an advanced reference guide to the mathematical theories related to fuzzy logic and fuzzy set theory with the potential to stimulate important discussions on new research directions in the field **Foundations of Fuzzy Logic and Soft Computing** Patricia Melin,2007-06-05 This book comprises a selection of papers from IFSA 2007 on new methods and theories that contribute to the foundations of fuzzy logic and soft computing Coverage includes the application of fuzzy logic and soft computing in flexible querying philosophical and human scientific aspects of soft computing search engine and information processing and retrieval as well as intelligent agents and knowledge ant colony **Probabilistic Metric Spaces** B. Schweizer,A. Sklar,2011-10-14 This distinctly nonclassical treatment focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory s historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known

Gil-Lafuente,2011-11-06 Little by little we are being provided with an arsenal of operative instruments of a non numerical nature in the shape of models and algorithms capable of providing answers to the aggressions which our economics and management systems must withstand coming from an environment full of turmoil In the work which we are presenting we dare to propose a set of elements from which we hope arise focuses capable of renewing those structures of economic thought which are upheld by the geometrical idea The concepts of pretopology and topology habitually marginalized in economics and management studies have centred our interest in recent times We consider that it is not possible to conceive formal structures capable of representing the Darwinism concept of economic behaviour today without recurring to this fundamental generalisation of metric spaces In our attempts to find a solid base to the structures proposed for the treatment of economic phenomena we have frequently resorted to the theory of clans and the theory of affinities with results which we believe to be satisfactory We would like to go further establishing if possible the connection between their axiomatics at the same time as developing some uncertain pretopologies and topologies capable of linking previously unconnected theories at

Harmati,László T. Kóczy,Jesús Medina,Eloísa Ramírez-Poussa,2021-08-25 Complex problems and systems which prevail in the real world cannot often be tackled and solved either by traditional methods offered by mathematics or even the traditional computer science CS and and artificial intelligence AI What is the way out of this dilemma Advanced methodologies and tools and techniques mimicking human reasoning or the behavior of animals animal populations or certain parts of the living bod based on traditional computer science science and the initial approaches of artificial intelligence are often referred to as biologically inspired methods or often computational intelligence CI Computational intelligence offers effective and efficient solutions to many unsolvable problems problems However it is far from being a ready to use and complete collection of approaches and is rather a continuously developing field without clear borders The emerging new models and algorithms of computational intelligence are deeply rooted in the vast apparatus of traditional mathematics Thus the investigation of connections and synergy between mathematics and computational intelligence is an eminent goal which is periodically pursued by a group of mathematicians and computational intelligence researchers who regularly attand the annual European Symposia on Computational Intelligence and Mathematics ESCIM Some relevant papers from the last ESCIM 2020 are included in this volume   Sports Management as an Emerging Economic Activity Marta Peris-Ortiz,José Álvarez-García,María de la Cruz Del Río-Rama,2017-10-05 This book examines the sports industry as a broad business and economic sector with an enormous influence on regional economic development Covering topics such as sports economics financing sports organizations sustainability management in sports sports tourism and doping among athletes this book provides a timely collection of research and best practices in the areas of sports management and policy Sports activity is a rapidly growing and evolving industry offering numerous business opportunities from the manufacturing of sporting equipment and activity at gyms and sports centers to revenue from sporting events and sport tourism In order for the varied businesses across the sport industry whether public or private to be successful proper management strategies and policies must be in place This includes the knowledge of the industry strategic planning sector analysis quality management and sustainable economic and

Rodabaugh,Erich Peter Klement,2013-03-14 This volume summarizes recent developments in the topological and algebraic structures in fuzzy sets and may be rightly viewed as a continuation of the stan dardization of the mathematics of fuzzy sets established in the Handbook namely the Mathematics of Fuzzy Sets Logic Topology and Measure Theory Volume 3 of The Handbooks of Fuzzy Sets Series Kluwer Academic Publish ers 1999 Many of the topological chapters of the present work are not only based upon the foundations and notation for topology laid down in the Hand book but also upon Handbook developments in convergence uniform spaces compactness separation axioms and canonical examples and thus this work is with respect to topology a continuation of the standardization of the Hand book At the same time this work significantly complements the Handbook in regard to algebraic structures Thus the present volume is an extension of the content and role of the Handbook as a reference work On the other hand this volume even as the Handbook is a culmination of mathematical developments motivated by the renowned International Sem inar on Fuzzy Set Theory also known as the Linz Seminar held annually in Linz Austria Much of the material of this volume is related to the Twenti eth Seminar held in February 1999 material for which the Seminar played a crucial and stimulating role especially in providing feedback connections and the necessary screening of ideas
