Many Sorted Calculus Based On Resolution And Paramodulation:

A Many-Sorted Calculus Based on Resolution and Paramodulation Christoph Walther, 2014-07-10 A Many Sorted Calculus Based on Resolution and Paramodulation emphasizes the utilization of advantages and concepts of many sorted logic for resolution and paramodulation based automated theorem proving This book considers some first order calculus that defines how theorems from given hypotheses by pure syntactic reasoning are obtained shifting all the semantic and implicit argumentation to the syntactic and explicit level of formal first order reasoning This text discusses the efficiency of many sorted reasoning formal preliminaries for the RP and RP calculus and many sorted term rewriting and unification The completeness and soundness of the RP calculus sort theorem and automated theorem prover for the RP calculus are also elaborated This publication is a good source for students and researchers interested in many sorted calculus **A**

The Knowledge Frontier Nick Cercone, Gordon McCalla, 2012-12-06 Knowledge representation is perhaps the most central problem confronting artificial intelligence Expert systems need knowledge of their domain of expertise in order to function properly Computer vision systems need to know characteristics of what they are seeing in order to be able to fully interpret scenes Natural language systems are invaluable aided by knowledge of the subject of the natural language discourse and knowledge of the participants in the discourse Knowledge can guide learning systems towards better understanding and can aid problem solving systems in creating plans to solve various problems

Applications such as intelligent tutoring computer aided VLSI design game playing automatic programming medical reasoning diagnosis in various domains and speech recognition to name a few are all currently experimenting with knowledge based approaches The problem of knowledge representation breaks down into several subsidiary problems including what knowledge to represent in a particular application how to extract or create that knowledge how to represent the knowledge efficiently and effectively how to implement the knowledge representation scheme chosen how to modify the knowledge in the face of a changing world how to reason with the knowledge and how to use the knowledge appropriately in the creation of the application solution This volume contains an elaboration of many of these basic issues from a variety of perspectives

CSL '87 Egon Börger, Hans Kleine Büning, Michael M. Richter, 1988-09-14 This volume contains the papers which were presented to the workshop Computer Science Logic held in Karlsruhe on October 12-16 1987 Traditionally Logic or more specifically Mathematical Logic splits into several subareas Set Theory Proof Theory Recursion Theory and Model Theory In addition there is what sometimes is called Philosophical Logic which deals with topics like nonclassical logics and which for historical reasons has been developed mainly at philosophical departments rather than at mathematics institutions Today Computer Science challenges Logic in a new way The theoretical analysis of problems in Computer Science for intrinsic reasons has pointed back to Logic A broad class of questions became visible which is of a basically logical nature These questions are often related to some of the traditional disciplines of Logic but normally without being covered adequately by any of them The novel and unifying aspect of this new branch of Logic is the algorithmic point of view which is based on experiences people had with computers The aim of the Computer Science Logic workshop and of this volume is to represent the richness of research activities in this field in the German speaking countries and to point to their underlying general logical principles

Logic, Algebra, and Computation Friedrich L. Bauer, 2012-12-06 The Marktoberdorf Summer Schools on Informatics were started in 1970 with the intention to convene every second or third year a group of top researchers in computing devoted to preach their most recent results to an elite of advanced students young and most promising people and prepared to stand their questions criticism and suggestions The themes of these Advanced Study Institutes under the sponsorship of the NATO Scientific Affairs Division varied slightly over the years oscillating more or less around Programming Methodology as the following list shows 1970 Data Structures and Computer Systems 1971 Program Structures and Fundamental Concepts of Programming 1973 Structured Programming and Programmed Structures 1975 Language Hierarchies and Interfaces 1978 Program Construction 1981 Theoretical Foundations of Programming Methodology 1984 Control Flow and Data Flow Concepts of Distributed Programming 1986 Logic of Programming and Calculi of Discrete Design 1988 Constructive Methods in Computing Science 1989 Logic Algebra and Computation Logic Algebra and Computation is the theme of the summer school to which this volume is devoted It is the tenth in succession but it is also the first in a new series the blue series that is intended to alternate in future with the traditional the red series

arrangement in fact the tenth summer school in the red series with the title Programming and Mathematical Method held in 1990 was the subject of celebrating both its serial number and the twenty years of Marktoberdorf Summer Schools altogether

Computational Lexical Semantics Patrick Saint-Dizier, Evelyn Viegas, 1995-02-24 Lexical semantics has become a major research area within computational linguistics drawing from psycholinguistics knowledge representation and computer algorithms and architecture Research programs whose goal is the definition of large lexicons are asking what the appropriate representation structure is for different facets of lexical information Among these facets semantic information is probably the most complex and the least explored Computational Lexical Semantics is one of the first volumes to provide models for the creation of various kinds of computerized lexicons for the automatic treatment of natural language with applications to machine translation automatic indexing and database front ends knowledge extraction among other things It focuses on semantic issues as seen by linguists psychologists and computer scientists Besides describing academic research it also covers ongoing industrial projects

Knowledge Engineering Shells Nikolaos G. Bourbakis, 1993 This book offers a systematic approach to knowledge engineering problems It gives a brief overview of knowledge engineering systems and environments covering both classical and recent techniques of the design and evaluation of them Detailed descriptions of particular techniques and applications are also provided

Representations of Commonsense Knowledge Ernest Davis, 2014-07-10 Representations of Commonsense Knowledge provides a rich language for expressing commonsense knowledge and inference techniques for carrying out commonsense knowledge This book provides a survey of the research on commonsense knowledge Organized into 10 chapters this book begins with an overview of the basic ideas on artificial intelligence commonsense reasoning This text then examines the structure of logic which is roughly analogous to that of a programming language Other chapters describe how rules of universal validity can be applied to facts known with absolute certainty to deduce other facts known with absolute certainty This book discusses as well some prominent issues in plausible inference The final chapter deals with commonsense knowledge about the interrelations and interactions among agents and discusses some issues in human and social interactions that have been studied in the artificial intelligence literature This book is a valuable resource for students on a graduate course on knowledge representation
