## Mapping And Sequencing The Human Genome:

**Mapping and Sequencing the Human Genome** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Mapping and Sequencing the Human Genome, 1988-01-01 There is growing enthusiasm in the scientific community about the prospect of mapping and sequencing the human genome a monumental project that will have far reaching consequences for medicine biology technology and other fields But how will such an effort be organized and funded How will we develop the new technologies that are needed What new legal social and ethical questions will be raised Mapping and Sequencing the Human Genome is a blueprint for this proposed project The authors offer a highly readable explanation of the technical aspects of genetic mapping and sequencing and they recommend specific interim and long range research goals organizational strategies and funding levels They also outline some of the legal and social questions that might arise and urge their early consideration by policymakers

**Mapping and Sequencing the Human Genome** , 1988 Numerous meetings have been held and a debate has developed in the biological community over the merits

of mapping and sequencing the human genome In response a committee to examine the desirability and feasibility of mapping and sequencing the human genome was formed to suggest options for implementing the project The committee asked many questions Should the analysis of the human genome be left entirely to the traditionally uncoordinated but highly successful support systems that fund the vast majority of biomedical research Or should a more focused and coordinated additional support system be developed that is limited to encouraging and facilitating the mapping and eventual sequencing of the human genome If so how can this be done without distorting the broader goals of biological research that are crucial for any understanding of the data generated in such a human genome project As the committee became better informed on the many relevant issues the opinions of its members coalesced producing a shared consensus of what should be done This report reflects that consensus

also the work of smaller scale institutions engaged in the mapping and sequencing of yeast human and pig DNA In doing so the authors expand the historiographical lens of genomics from a focus on large scale projects to other forms of organisation They show how practices such as genome mapping sequence assembly and annotation are as essential as DNA sequencing in the history of genomics and argue that existing depictions of genomics are too closely associated with the Human Genome Project Exploring the use of genomic tools by biochemists cell biologists and medical and agriculturally oriented geneticists this book portrays the history of genomics as inseparably entangled with the day to day practices and objectives of these communities The authors also uncover often forgotten actors such as the European Commission a crucial funder and forger of collaborative networks undertaking genomic projects In examining historical trajectories across species communities and projects the book provides new insights on genomics its dramatic expansion during the late twentieth century and its developments in the twenty first century Offering the first extensive critical examination of the nature and historicity of reference genomes this book demonstrates how their affordances and limitations are shaped by the involvement or absence of particular communities in their production
