Construction of Mappings for Hamiltonian Systems and Their Applications Sadrilla S. Abdullaev, 2006-08-02 Based on the method of canonical transformation of variables and the classical perturbation theory this innovative book treats the systematic theory of symplectic mappings for Hamiltonian systems and its application to the study of the dynamics and chaos of various physical problems described by Hamiltonian systems It develops a new mathematically rigorous method to construct symplectic mappings which replaces the dynamics of continuous Hamiltonian systems by the discrete ones Applications of the mapping methods encompass the chaos theory in non twist and non smooth dynamical systems the structure and chaotic transport in the stochastic layer the magnetic field lines in magnetically confinement devices of plasmas ray dynamics in waveguides etc The book is intended for postgraduate students and researches physicists and astronomers working in the areas of plasma physics hydrodynamics celestial mechanics dynamical astronomy and accelerator physics It should also be useful for applied mathematicians involved in analytical and numerical studies of dynamical systems

Arithmetic of Probability Distributions, and Characterization Problems on Abelian Groups

Gennadii Mikhaïlovich Fel'dman, 1993 This book studies the problem of the decomposition of a given random variable into a sum of independent random variables components Starting from the famous Cramer theorem which says that all components of a normal random variable are also normal random variables the central feature of the book is Feldman's use of powerful analytical techniques In the algebraic case one cannot directly use analytic methods because of the absence of a natural analytic structure on the dual group which is the domain of characteristic functions Nevertheless the methods developed in this book allow one to apply analytic techniques in the algebraic setting The first part of the book presents results on the arithmetic of probability distributions of random variables with values in a locally compact abelian group The second part studies problems of characterization of a Gaussian distribution of a locally compact abelian group by the independence or identical distribution of its linear statistics

Singularities Vladimir I. Arnold, Gert-Martin Greuel, Joseph H.M.

Steenbrink, 2012-12-06 In July 1996 a conference was organized by the editors of this volume at the Mathematisches Forschungsinstitut Oberwolfach to honour Egbert Brieskorn on the occasion of his 60th birthday Most of the mathematicians invited to the conference have been influenced in one way or another by Brieskorn's work in singularity theory It was the first time that so many people from the Russian school could be present at a conference in singularity theory outside Russia This volume contains papers on singularity theory and its applications written by participants of the conference In many cases they are extended versions of the talks presented there The diversity of subjects of the contributions reflects singularity theory's relevance to topology analysis and geometry combining ideas and techniques from all of these fields as well as demonstrating the breadth of Brieskorn's own interests This volume contains papers on singularity theory and its

applications written by participants of the conference In many cases they are extended versions of the talks presented there The diversity of subjects of the contributions reflects singularity theory s relevance to topology analysis and geometry combining ideas and techniques from all of these fields as well as demonstrates the breadth of Brieskorn s own interests

Geometry of Riemann Surfaces and Teichmüller Spaces M. Seppälä,T. Sorvali,2011-08-18 The moduli problem is to describe the structure of the space of isomorphism classes of Riemann surfaces of a given topological type This space is known as the moduli space and has been at the center of pure mathematics for more than a hundred years In spite of its age this field still attracts a lot of attention the smooth compact Riemann surfaces being simply complex projective algebraic curves Therefore the moduli space of compact Riemann surfaces is also the moduli space of complex algebraic curves This space lies on the intersection of many fields of mathematics and may be studied from many different points of view The aim of this monograph is to present information about the structure of the moduli space using as concrete and elementary methods as possible This simple approach leads to a rich theory and opens a new way of treating the moduli problem putting new life into classical methods that were used in the study of moduli problems in the 1920s Advanced Algebra Mr. Rohit

,2017-07-21 Geographical Information Systems Three Volume Set is a computer system used to capture store analyze and

display information related to positions on the Earth's surface. It has the ability to show multiple types of information on multiple geographical locations in a single map, enabling users to assess patterns and relationships between different information points, a crucial component for multiple aspects of modern life and industry. This 3-volume reference provides an up-to-date account of this growing discipline through in-depth reviews authored by leading experts in the field.

VOLUME EDITORS Thomas J. Cova, The University of Utah, Salt Lake City, UT, United States; Ming Hsiang Tsou, San Diego State University, San Diego, CA, United States; Georg Bareth, University of Cologne, Cologne, Germany; Chunqiao Song, University of California, Los Angeles, CA, United States; Yan Song, University of North Carolina at Chapel Hill, Chapel Hill, NC, United States; Kai Cao, National University of Singapore, Singapore; Elisabete A. Silva, University of Cambridge, Cambridge, United Kingdom.

Covers a rapidly expanding discipline, providing readers with a detailed overview of all aspects of geographic information systems: principles and applications. Emphasizes the practical socioeconomic applications of GIS. Provides readers with a reliable one-stop comprehensive guide, saving them time in searching for the information they need from different sources.

Explorations in Complex and Riemannian Geometry John Bland, Kang-Tae Kim, Steven George Krantz, 2003. This book contains contributions by an impressive list of leading mathematicians. The articles include high-level survey and research papers exploring contemporary issues in geometric analysis, differential geometry, and several complex variables. Many of the articles will provide graduate students with a good entry point into important areas of modern research. The material is intended for researchers and graduate students interested in several complex variables and complex geometry.

New Directions in Radical Cartography Phil Cohen, Mike Duggan, 2021-12-17. *New Directions in Radical Cartography* looks at the contemporary debates about the role of maps in society. It explores the emergence of counter-mapping as a distinctive field of practice and the impact that digital mapping technologies have had on cartographic practice and theory. It includes original research accounts of mapping projects and detailed readings of maps. The contributors explore how digital mapping technologies have sponsored a new wave of practices that seek to challenge the power that maps are commonly assumed to have. They document the continued vitality of analogue maps in the hands of artists and activists who are pushing the boundaries of what is mappable in different ways. *New Directions in Radical Cartography* draws on a rich body of mapping work that exists as part of community action, urban ethnography, environmental activism, humanitarianism, and public engagement.

Non-Associative Normed Algebras: Volume 2, Representation Theory and the Zel'manov Approach Miguel Cabrera García, Ángel Rodríguez Palacios, 2018-04-12. This first systematic account of the basic theory of normed algebras without assuming associativity includes many new and unpublished results and is sure to become a central resource for researchers and graduate students in the field. This second volume revisits JB triples, covers Zel'manov's celebrated work in Jordan theory, proves the unit-free variant of the Vidav-Palmer theorem, and develops the representation theory of alternative C^* -algebras and non-commutative JB-algebras. This completes the work begun in the first volume, which introduced these

algebras and discussed the so called non associative Gelfand Naimark and Vidav Palmer theorems This book interweaves pure algebra geometry of normed spaces and infinite dimensional complex analysis Novel proofs are presented in complete detail at a level accessible to graduate students The book contains a wealth of historical comments background material examples and an extensive bibliography
