## **Marburg And Ebola Viruses:**

**Ebola and Marburg Viruses** Hans-Dieter Klenk, Heinz Feldmann, 2004 The Ebola and Marburg viruses are a pair of filoviruses that are among the most lethal hemorrhagic viruses on the planet The authors present a review of past and current research into these pathogens including 12 papers addressing the structure of the viral proteins genomic replication molecular mechanisms of entry pathogenesis in nonhuman primates guinea pigs and mice virus modulation of innate immunity and cellular and molecular mechanisms of Ebola pathogenicity and related approaches to vaccine development

**Marburg and Ebola Viruses** Hans-Dieter Klenk, 1998-10-20 Marburg and Ebola virus the two species within the family Filoviridae are among the most pathogenic agents causing fulminant hemorrhagic fever in humans and nonhuman primates The chronology of filovirus epidemics and epizootics proves that these viruses are prototypes of emerging re emerging pathogens Since the discovery of Marburg virus in 1967 until the recent Ebola virus outbreaks in Central and West Africa filoviruses have not only raised the interest of scientists but have also been a matter of high public concern With the advent of recombinant DNA technology our knowledge on the genome structure and the replication strategies of these agents has significantly increased This volumes gives an overview on many aspects of filovirus research and summarizes recent advances in the field The topics addressed include the molecular biology of filoviruses pathogenesis epidemiology immune response as well as clinical aspects and diagnostic measures

**Marburg- and Ebolaviruses** Elke Mühlberger, Lisa L. Hensley, Jonathan S. Towner, 2017-12-23 This volume provides an overview of recent advances in our understanding of the biology of marburg and ebolaviruses It focuses on four essential areas 1 ecology outbreaks and clinical management 2 disease pathogenesis and protection 3 virus replication inside the cell and 4 molecular tools for virus study and taxonomy For 50 years these viruses have spilled over sporadically and without warning from their wildlife reservoirs often causing major outbreaks and high fatalities The consequences can be devastating with a clear potential for global reach as demonstrated by the 2013 West African outbreak of Ebola virus which led to over 28 000 reported cases across three continents and more than 11 000 deaths Given the international threat posed by these viruses the pace and scope of basic research have also greatly intensified ranging from studies of virus emergence epidemiology antiviral countermeasures and human disease to detailed mechanistic studies of virus entry replication virion assembly and protein structure Written by internationally respected experts this book will appeal to a wide audience and be a valuable resource for basic researchers clinicians and advanced students alike

**Ebola and Marburg Viruses** Patrick Guilfoile, 2020 Ebola virus and Marburg virus are related viruses that cause hemorrhagic fevers

**Ebola and Marburg Viruses** Elena Ryabchikova, Barbara B. S. Price, 2004 Electron microscopy has a special place among the wide range of techniques available for viral research With electron microscopy a virologist can follow the course of viral infections by visualizing cell damage and viral replication Each virus family has its own structural and functional attributes but attention is usually focused on the pathogenic and health threatening viruses

The Ebola and Marburg filoviruses are notorious among these. The work was done at Vector in Novosibirsk, Russia, by Dr Ryabchikova. Dr Price has made it possible for Dr Ryabchikova to explain her experiments and insights by expanding the descriptions and making the book readable by professionals who are not steeped in the intricacies of virology. In the course of writing this book, Dr Price has incorporated more complete references of work done by other laboratories so that the story of the filoviruses is a compilation of the research done internationally but told from the Russian perspective. In *Ebola and Marburg Viruses: A View of Infection Using Electron Microscopy*, the authors combine recent published and unpublished literature with the insight developed in over 30 years in electron microscopy and 15 years in virology to tell the story of filoviruses and how they invade and conquer their hosts. The book describes the dynamic properties of these viruses, follows the stages of filoviral infection from the individual cell to the whole organism, and reconstructs the sequential events that occur in filoviral infections. The book also demonstrates that rather than a curiosity, the electron micrograph is an integral tool in studies of viral infection and the pathological process. *Ebola and Marburg Viruses: A View of Infection Using Electron Microscopy* includes over 100 outstanding electron micrographs of filoviruses and the cell and tissue damage they cause during infection. *Ebola and Marburg Viruses: A View of Infection Using Electron Microscopy* is addressed to investigators in the widely diversified fields of medicine and biology. For this reason, Ryabchikova and Price have carefully elucidated concepts familiar to virologists that may be unfamiliar to nonvirologists. The book is also designed to provide opportunities for investigators specializing in viruses to correlate their findings with the work of electron microscopists. **Ebola and**

**Marburg Viruses** Tara C. Smith, 2011. Ebola virus and Marburg virus are related viruses that cause hemorrhagic fevers, illnesses marked by severe bleeding, organ failure, and in many cases, death. These viruses are native to Africa, where sporadic outbreaks have occurred for decades. *Ebola and Marburg Virus: Second Edition* takes a look at the nature and origins of these viruses, transmission, treatment, and current vaccine research. Chapters include: A Modern Plague, The Emergence of Marburg Virus, Ebola in Africa, and Beyond. Characteristics of Filoviruses, Ecology of the Viruses, Detection and Treatment, Developing a Vaccine, Other Hemorrhagic Fevers. **Marburg and Ebola Viruses** Stephan Becker, Heinz Feldmann, Thomas W.

Geisbert, 2018. **Endothelial Biomedicine** William C. Aird, 2007-09-03. The endothelium, the cell layer that forms the inner lining of blood vessels, is a spatially distributed system that extends to all areas of the human body. Clinical and basic research demonstrates that the endothelium plays a crucial role in mediating homeostasis and is involved in virtually every disease, either as a primary determinant of pathophysiology or as a victim of collateral damage. The endothelium has remarkable, though largely untapped, diagnostic and therapeutic potential. This volume bridges the bench-to-bedside gap in endothelial biomedicine, advancing research and development and improving human health. The book is the first to systematically integrate knowledge about the endothelium from different organ-specific disciplines, including neurology, pulmonary, cardiology, gastroenterology, rheumatology, infectious disease, hematology, oncology, nephrology, and dermatology. It s

interdisciplinary approach which draws on expertise from such diverse fields as evolutionary biology comparative biology molecular and cell biology mathematical modeling and complexity theory translational research and clinical medicine

**Manual of Security Sensitive Microbes and Toxins** Dongyou Liu, 2014-04-08 Security sensitive microbes viruses bacteria fungi and parasites and toxins which are often referred to as the select agents and toxins have the capacity to cause serious illness and death in humans animals and plants This book is an authoritative and comprehensive review of security sensitive microbes viruses bacteria fungi and parasites and toxins with an emphasis on the state of the art in the field Written by experts in the field the chapters present authoritative reviews each one covering a single microbe or toxin with respect to its classification biology epidemiology pathogenesis identification diagnosis treatment and prevention The chapters also discuss the limitations of our current knowledge and challenges relating to improved detection and control of the microbe or toxin

Marburg and Ebola Viruses as Aerosol Threats ,2004 Ebola and Marburg viruses are the sole members of the genus Filovirus in the family Filoviridae There has been considerable media attention and fear generated by outbreaks of filoviruses because they can cause a severe viral hemorrhagic fever VHF syndrome that has a rapid onset and high mortality Although they are not naturally transmitted by aerosol they are highly infectious as respirable particles under laboratory conditions For these and other reasons filoviruses are classified as category A biological weapons However there is very little data from animal studies with aerosolized filoviruses Animal models of filovirus exposure are not well characterized and there are discrepancies between these models and what has been observed in human outbreaks Building on published results from aerosol studies as well as a review of the history epidemiology and disease course of naturally occurring outbreaks we offer an aerobiologist's perspective on the threat posed by aerosolized filoviruses
