Intelligent Autonomous Systems 6 Enrico Pagello, 2000. After a long period in which the research focused mainly on industrial robotics, nowadays scientists aim to build machines able to act autonomously in unstructured domains and to interface friendly with humans while performing intelligently their assigned tasks. Such intelligent autonomous systems are now being intensively developed and are ready to be applied to every field from social life to modern enterprises. We believe the following years will be increasingly characterised by their extensive use. This is dramatically changing the whole scenario of human society. *Library of Congress Catalogs* Library of Congress, 1980. **España** Francisco Calvo Serraller, 1985-12.

Subject Catalog Library of Congress, 1982. **Field and Service Robotics** Alexander Zelinsky, 2012-12-06. Joe Engelberger, the pioneer of the robotics industry, wrote in his 1989 book *Robotics in Service* that the inspiration to write his book came as a reaction to an industry-sponsored forecast study of robot applications which predicted that in 1995 applications of robotics outside factories, the traditional domain of industrial robots, would amount to less than 1% of total sales. Engelberger believed that this forecast was very wrong and instead predicted that the non-industrial class of robot applications would become the largest class. Engelberger's prediction has yet to come to pass. However, he did correctly foresee the growth in non-traditional applications of robots. Robots are now beginning to march from the factories and into field and service applications. This book presents a selection of papers from the first major international conference dedicated to field and service applications of robotics. This selection includes papers from the leading research laboratories in the world together with papers from companies that are building and selling new and innovative robotic technology. It describes interesting aspects of robots in the field, ranging from mining, agriculture, construction, cargo handling, subsea operations, removal of landmines to terrestrial exploration. It also covers a diverse range of service applications such as cleaning, propagating plants and aiding the elderly and handicapped, and gives considerable attention to the technology required to realise robust, reliable and safe robots. **Marc Fourquet** Philippe Saulle, Musée d'art moderne et de la création contemporaine (Toulouse), 1992. *Bibliographie nationale française*, 1998.
