Narrow-gap II-VI Compounds for Optoelectronic and Electromagnetic Applications Peter Capper, 1997-10-31 The field of narrow gap II VI materials is dominated by lhe compound mercury cadmium telluride MCT or Hg1 Cd Te By varying the x value material can be made to cover all the important infrared IR ranges of interest It is probably true to say that MCT is the third most studied semiconductor after silicon and gallium arsenide As current epitaxial layers of MCT are mainly grown on bulk CdTe family substrates these materials are included in this book although strictly of course they are not narrow gap This book is intended for readers who are either new to the field or are experienced workers in the field who need a comprehensive and up to date view of this rapidly expanding area To satisfy the needs of the first group each chapter discusses the principles underlying each topic and some of the historical background before bringing the reader the most recent information available For those currently in the field the book can be used as a collection of useful data as a guide to the literature and as an overview of topics covering the wide range of work areas Handbook of II-VI Semiconductor-Based Sensors and Radiation Detectors Ghenadii Korotcenkov, 2023-04-20 Three volumes book Handbook of II VI Semiconductor Based Sensors and Radiation Detectors is the first to cover both chemical sensors and biosensors and all types of photodetectors and radiation detectors based on II VI semiconductors It contains a comprehensive and detailed analysis of all aspects of the application of II VI semiconductors in these devices The first volume Materials and Technologies of a three volume set describes the physical chemical and electronic properties of II VI compounds which give rise to an increased interest in these semiconductors Technologies that are used in the development of various devices based on II VI connections such as material synthesis deposition characterization processing and device fabrication are also discussed in detail in this volume It covers also topics related to synthesis and application of II VI based nanoparticles and quantum dots as well their toxicity biocompatibility and biofunctionalization *Narrow-gap Semiconductor Photodiodes* Antoni Rogalski, Krzysztof Adamiec, Jaroslaw Rutkowski, 2000 In this monograph investigations of the performance of narrow gap semiconductor photodiodes are presented and recent progress in different IR photodiode technologies is discussed HqCdTe photodiodes InSb photodiodes alternatives to HqCdTe III V and II VI ternary alloy photodiodes lead chalcogenide photodiodes and a new class of photodiodes based on two dimensional solids Investigations of the performance of photodiodes operated in different spectral regions are presented Narrow-Gap Semiconductors ,2006-04-11 Special Systems and Topics. Demianets, Anatoly N. Lobachev, Gennadi A. Emelchenko, Horst Maier, Joachim Hesse, 2012-12-06 1 1 Preface Organic chemistry had its origin in chemicals which are synthesized by living cells These chemicals consist of molecules whose skeletons are built up of carbon atoms The remaining valences are connected with ligands such as hydrogen halo gens OH O NH Some of the skeletal carbon atoms can be replaced by non 2 metals such as oxygen nitrogen or sulfur heteroatoms It is characteristic for the living world not to be in a crystalline state However it is possible to obtain single crystals from many organic compounds both of natural and synthetic origin For a number of years the physics and chem istry of these crystals have stimulated fundamental research on a rapidly growing scale The great variety of possible organic structures as compared to inorganics opens up a large field of new materials and of novel material properties for previous literature reviews and data compilations see 1 40 and Chap 6 The art of producing good and pure organic single crystals has developed hand in hand with the ever growing requirements of basic research arising from its interest in fundamental interactions in the solid state Interactions manifest themselves in a very detailed way by energy transfer January 1,2022-01-19 No detailed description available for January 1 Infrared Detectors Antonio Rogalski, 2010-11-15 Completely revised and reorganized while retaining the approachable style of the first edition Infrared Detectors Second Edition addresses the latest developments in the science and technology of infrared IR detection Antoni Rogalski an internationally recognized pioneer in the field covers the comprehensive range of subjects necessary to un **Physics of Non-Tetrahedrally Bonded Binary** Compounds III / Physik Der Nicht-tetraedrisch Gebundenen Binären Verbindungen III J.B. Werheit, 1984-10 Springer Handbook of Electronic and Photonic Materials Safa Kasap, Peter Capper, 2017-10-04 The second updated edition of this essential reference book provides a wealth of detail on a wide range of electronic and photonic materials starting from fundamentals and building up to advanced topics and applications Its extensive coverage with clear illustrations and applications carefully selected chapter sequencing and logical flow makes it very different from other electronic materials handbooks It has been written by professionals in the field and instructors who teach the subject at a university or in corporate laboratories The Springer Handbook of Electronic and Photonic Materials second edition includes practical applications used as examples details of

experimental techniques useful tables that summarize equations and most importantly properties of various materials as well as an extensive glossary Along with significant updates to the content and the references the second edition includes a number of new chapters such as those covering novel materials and selected applications. This handbook is a valuable resource for graduate students researchers and practicing professionals working in the area of electronic optoelectronic and Low Temperature Epitaxial Growth of Semiconductors Takashi Hariu, 1991 Low temperature processes for semiconductors have been recently under intensive development to fabricate controlled device structures with minute dimensions in order to achieve the highest device performance and new device functions as well as high integration density Comprising reviews by experts long involved in the respective pioneering work this volume makes a useful contribution toward maturing the process of low temperature epitaxy as a whole **National Semiconductor Metrology Program** National Institute of Standards and Technology (U.S.),1999 National Semiconductor Metrology Program, Semiconductor Electronics Division, NIST List Of Publications, LP 103, March 1999, 1999 **National Semiconductor** Metrology Program National Semiconductor Metrology Program (U.S.),2000 National Semiconductor Metrology Program, NIST List OF Publications, LP 103, May 2000, 2000 Semiconductors — Basic Data Otfried Madelung, 2012-12-06 The frequent use of well known critical data handbooks like Beilstein Gmelin and Landolt Bomstein is impeded by the fact that merely larger libraries often far away from the scientist's working place can afford such precious collections To satisfy an urgent need of many scientists working in the field of semiconductor physics for having at their working place a comprehensive high quality but cheap collection of at least the basic data of their field of interest this volume contains the most important data of semiconductors All data were compiled from information on semiconductors presented on more than 6000 pages in various volumes of the New Series of Landolt Bomstein We hope to meet the needs of the community of semiconductor physicists with this volume forming a bridge between the laboratory and additional information sources in the libraries The Editor Marburg January 1996 Table of contents A Introduction 1 General remarks 1 2 The corresponding Landolt Bomstein volumes 2 3 Physical quantities tabulated in this volume 3 B Physical data Elements of the IVth group and IV IV compounds 1 1 Diamond C 5 1 2 Silicon Si 11 1 3 Germanium Ge 28 1 4 Grey tin a Sn 42 1 5 Silicon carbide SiC 47 1 6 Silicon germanium alloys SixGel x 57 2 III V compounds 2 1 Boron nitride BN 60 2 2 Boron phosphide BP 65 2 3 Boron arsenide BAs 68 2 4 Aluminium nitride AIN 69 2 5 Aluminium phosphide AlP 72 2 6 Aluminium arsenide AlAs

Mid-infrared Optoelectronics Eric Tournié, Laurent Cerutti, 2019-10-19 Mid infrared Optoelectronics Materials Devices and Applications addresses the new materials devices and applications that have emerged over the last decade along with exciting areas of research Sections cover fundamentals light sources photodetectors new approaches and the application of mid IR devices with sections discussing LEDs laser diodes and quantum cascade lasers mid infrared optoelectronics emerging research areas dilute bismide and nitride alloys Group IV materials gallium nitride heterostructures and new

nonlinear materials Finally the most relevant applications of mid infrared devices are reviewed in industry gas sensing spectroscopy and imaging This book presents a key reference for materials scientists engineers and professionals working in R D in the area of semiconductors and optoelectronics Provides a comprehensive overview of mid infrared photodetectors and light sources and the latest materials and devices Reviews emerging areas of research in the field of mid infrared optoelectronics including new materials such as wide bandgap materials chalcogenides and new approaches like heterogeneous integration Includes information on the most relevant applications in industry like gas sensing spectroscopy and imaging Infrared and Terahertz Detectors, Third Edition Antoni Rogalski, 2019-01-10 This new edition of Infrared and Terahertz Detectors provides a comprehensive overview of infrared and terahertz detector technology from fundamental science to materials and fabrication techniques It contains a complete overhaul of the contents including several new chapters and a new section on terahertz detectors and systems It includes a new tutorial introduction to technical aspects that are fundamental for basic understanding The other dedicated sections focus on thermal detectors photon detectors and focal plane arrays Optical Switching in Low-Dimensional Systems Hartmut Haug, L. Banyai, 2012-12-06 This book contains all the papers presented at the NATO workshop on Optical Switching in Low Dimensional Systems held in Marbella Spain from October 6th to 8th 1988 Optical switching is a basic function for optical data processing which is of technological interest because of its potential parallelism and its potential speed Semiconductors which exhibit resonance enhanced optical nonlinearities in the frequency range close to the band edge are the most intensively studied materials for optical bistability and fast gate operation Modern crystal growth techniques particularly molecular beam epitaxy allow the manufacture of semiconductor microstructures such as quantum wells quantum wires and quantum dots in which the electrons are only free to move in two one or zero dimensions of the optically excited electron hole pairs in these low respectively The spatial confinement dimensional structures gives rise to an enhancement of the excitonic nonlinearities Furthermore the variations of the microstruture extensions of the compositions and of the doping offer great new flexibility in engineering the desired optical properties Recently organic chain molecules such as polydiacetilene which are different realizations of one dimensional electronic systems have been shown also to have interesting optical nonlinearities Both the development and study of optical and electro optical devices as well as experimental and theoretical investigations of the underlying optical nonlinearities are contained in this book
