Target Search Problems Denis Grebenkov, Ralf Metzler, Gleb Oshanin, 2024-12-26 This book presents cutting edge research addressing the mathematical models used to tackle the Target problem as it manifests itself in a wide range of disciplines. Leading international experts from around the world describe a variety of different approaches to this truly multidisciplinary topic. Recent years have witnessed a substantial and still growing interest in understanding the general Target problem. This encompasses a wide range of different situations in which some agents perform a deterministic or stochastic motion to search for a certain immobile or mobile target. Such problems arise in many disciplines to name but a few: computer science, the evolution of stock markets, biochemistry, bio medicine, evolutionary games, as well as diverse areas of physics. This book, with its up to date collection of chapters authored by leading experts in these and other fields, provides a comprehensive and complete picture in broadly accessible language. The book will naturally serve as a source of inspiration for further research, as well as facilitating a cross fertilization of approaches, ideas, and research directions. **Hélène**

Cixous, Rootprints Mireille Calle-Gruber, Hélène Cixous, 2012-11-12 Helene Cixous is undoubtedly one of the most brilliant and innovative contemporary thinkers. Published here in English for the first time, Helene Cixous' *Rootprints* is an ideal introduction to Cixous's theory and her fiction, tracing her development as a writer and intellectual whose remarkable prespicacity and electrifying poetic force are known world wide. Unprecedented in its form and content, this collection breaks new ground in the theory and practice of auto biography. Cixous's creative reflections on the past provide occasion for scintillating forays into the future. The text includes an extended interview between Cixous and Calle Gruber exploring Cixous's creative and intellectual processes, a revealing collection of photographs taken from Cixous's family album, set against a poetic reflection by the author, selections from Cixous's private notebooks, a contribution by Jacques Derrida, original things, pieces by Calle Gruber. **Homestead** Margaret Byington, 2022-02-22 Forward by Tom Waseleski. First published in 1910 in the classic *Pittsburgh Survey*, this pioneering work of American social history, reproduced in its entirety, describes daily life in a community that was dominated economically and physically by the giant Homestead Works of the United States Steel Corporation. The town of Homestead, just across the Monongahela River from Pittsburgh, developed as a completely separate city, a true mill town, settled by newer immigrants and shaped in its attitudes by the infamous Homestead Strike of 1892, which significantly set back unionization efforts in the steel industry. *Homestead: The Households of a Mill Town* not only focuses on the plight of the American steel worker in the late nineteenth and early twentieth century; it also explores the domestic and community aspects of life in that time period. **Ubuntu** Paul Nnodim, Austin Okigbo, 2024-02 *Ubuntu* is an African philosophical tradition that embodies the ability of one human being to empathize with another. It is the quintessence of African humanism, communalism, and belonging. As the late Archbishop Desmond Tutu anticipated, *Ubuntu* resonated with the moral intuition of the majority of black South Africans in the 1990s. As a result, it became the foundational ethical basis for

articulating a new post apartheid era of reconciliation and forgiveness in the face of a history marked by brutal racial violence Yet Ubuntu as a philosophy or ethical practice which has arguably come to represent African humanism and communalism has not been sufficiently assimilated into contemporary philosophical scholarship This anthology weaves interdisciplinary perspectives into the discourse on African relational ethics in dialogue with Western normative ideals across a wide range of issues including justice sustainable development musical culture journalism and peace It explains the philosophy of Ubuntu to both African and non African scholars Comprehensively written this book will appeal to a broad audience of academic and non academic readers *Language in Use* Adrian Doff, Christopher Jones, 1994 **THE WORLD**

AT HOME MARY AND ELIZABETH KIRBY, 1869 Guide's Greatest Narrow Escape Stories Lori Peckham, 2008-05

Sometimes things happen that convince you Somebody's got your back You know those close calls that make your heart start racing or nearly stop Those nerve racking experiences that leave you in shock and relief that you made it through Those are the narrow escapes that make you realize that God is working overtime to keep you safe Here are the true stories of some astonishing narrow escapes that definitely involved help from Heaven How else could we explain these stories of survival Just imagine being held at gunpoint by two drunk men What about a car stuck on railroad tracks with a train fast approaching And just wait until you read about a frightening visit to a fortuneteller a raging bull running straight toward a girl and scuba divers trapped under a sheet of ice Whew There's nothing like a narrow escape to remind us that God is watching out for us

quenching trapping of particles by other species coagulation binding of ligands and proteins to specific sites chemotaxis catalytically induced self propulsion polymerization growth of dendrites or aggregates or nuclei of a new phase Several decades ago it was recognized that the kinetic behavior in some systems with reactions and random transport is strongly affected by many factors which were not taken into account in previous studies These are to name but a few fluctuations in the spatial distributions of the reactants and fluctuations of the reactivity some essentially many particle phenomena effects of anomalous diffusion molecular crowding as well as the internal geometry of the reaction bath Within recent years along with a growing interest in chemical processes occurring in biological systems or cellular environments numerous advances have been made and considerable knowledge has been acquired These seminal contributions are however scattered among many journals and no attempt has been made so far to present a unified picture This book presents a general overview of different contemporary facets of chemical kinetics in a variety of different environments It includes 23 seminal works and reviews on different aspects of reaction processes in chemical physical and biophysical systems both theoretical and experimental
