**Perception: Facts and Theories** C. W. K. Mundle, 1971      *Perception: Facts and Theories [by] C. W. K. Mundle*  
Clement Williams Kennedy Mundle,      A Pluralist Theory of Perception Neil Mehta, 2024-08-06 A new theory of perception that posits that conscious perception consists not of a single kind of awareness but of two radically different kinds deployed in concert Most contemporary theories of perception including leading forms of representationalism and naive realism are monistic they assume that to consciously perceive is to deploy only one kind of sensory awareness In A Pluralist Theory of Perception Neil Mehta instead argues for pluralism which says that to consciously perceive is to deploy two very different kinds of sensory awareness in concert Mehta argues that pluralism can simultaneously explain what is common to all forms of consciousness and what is distinctive about conscious perception Mehta's preferred version of pluralism which he calls rich pluralism says that conscious perception is constituted by successful sensory representation and deep awareness Successful sensory representation is a representational form of awareness whose targets include particulars It is found in perceptions whether conscious or unconscious but not in hallucinations By contrast deep awareness is a nonrepresentational form of sensory awareness whose targets are certain universals the sensory qualities Deep awareness constitutes one kind of consciousness it is common to conscious perceptions and hallucinations and it reveals part of the essences of its targets Mehta argues that although rich pluralism appears to be less parsimonious than monism it is not All monistic theories that are explanatorily adequate end up being even more complex than rich pluralism Thus rich pluralism is the most spartan theory that can shoulder the explanatory load      **Russell's Theory of Perception** Sajahan Miah, 2006-05-30 In Russell's Theory of Perception Sajahan Miah re-examines and evaluates the development of Russell's concept of perception and the relation of perception to our knowledge of the external world With the introduction of logical construction in which physical objects are constructed from actual and possible sense data Russell's theory of perception seems to become a causal theory with phenomenalist overtones The book argues that there is a consistency of purpose and direction which motivated Russell to introduce logical construction The purpose was to strike a compromise between his empiricism and his realism and to establish a bridge between the objects of perception and the objects of physics and common sense      **Facts, Problems, Conjectures and Negations about Perception and Observations** Leo Apostel, 1980      *Theories of Knowledge* Leslie Joseph Walker, 1910      *A Contextualistic Worldview* Lewis Edwin Hahn, 2001 This selection of articles by Lewis E Hahn addresses the philosophical school of contextualism and four contemporary American philosophers John Dewey Henry Nelson Wieman Stephen C Pepper and Brand Blanshard Stressing the relatively recent contextualistic worldview which he considers one of the best world hypotheses Hahn seeks to achieve a broad perspective within which all things may be given their due place After providing a brief outline Hahn explains contextualism in relation to other philosophies In his opening chapter as in later chapters he expresses contextualism as a form of pragmatic naturalism In spite of Hahn's high regard for

contextualism however he does not think it would be good if we were limited to a single worldview The more different views we have and the more different sources of possible light we have the better our chances that some of these cosmic maps will shed light on our world and our place in it **Elsevier's Dictionary of Psychological Theories** J.E. Roedelius,2006-01-19

consumer discourse Marketers create them as devices to sell their products or services However once brands are marketed they belong to consumers because the latter confer relevance or recognition upon them Brand viability depends upon significance to consumers and their brand use This book explains what brands mean to consumers and how they use brands for their own purpose of conveying that meaning to others It illuminates not only how consumers use brands to communicate but also how advertising has become an integral component of the cultural communication system that is consumption

*The Normative Force of the Factual* Nicoletta Bersier Ladavac,Christoph Bezemek,Frederick Schauer,2019-06-26 This book explores the interrelation of facts and norms How does law originate in the first place What lies at the roots of this phenomenon How is it preserved And how does it come to an end Questions like these led Georg Jellinek to speak of the normative force of the factual in the early 20th century emphasizing the human tendency to infer rules from recurring events and to perceive a certain practice not only as a fact but as a norm a norm which not only allows us to distinguish regularity from irregularity but at the same time to treat deviances as transgressions Today Jellinek s concept still provides astonishing insights on the dichotomy of is and ought to be the emergence of the normative the efficacy and the defeasibility of legal norms and the distinct character of what legal theorists refer to as normativity It leads us back to early legal history it

connects anthropology and legal theory and it demonstrates the interdependence of law and the social sciences In short it invites us to fundamentally reassess the interrelation of facts and norms from various perspectives The contributing authors to this volume have accepted that invitation      Philosophical Foundations of the Three Sociologies (RLE Social Theory) Ted Benton, 2014-09-19 An extended historical and philosophical argument this book will be a valuable text for all students of the philosophy of the social sciences It discusses the serious alternatives to positivist and empiricist accounts of the physical sciences and poses the debate between naturalism and anti naturalism in the social sciences in new terms Recent materialist and realist philosophies of science make possible a defence of naturalism which does not make concessions to positivism and which recognizes the force of several of the anti positivist arguments from the main anti naturalist neo Kantian tradition The author presents a critical evaluation of empiricist and positivist theories of knowledge and investigates some classic attempts at using them to provide the philosophical foundation for a scientific sociology He takes the Kantian critique of empiricism as the starting point for the main anti positivist and anti naturalist philosophical approaches to the social studies He goes on to investigate the inadequacy of post Kantian arguments from Rickert Weber Winch and others both against non positivist forms of naturalism and as the possible source of a distinctive philosophical foundation for the social studies The book concludes with a critical investigation of the Marxian tradition and an attempt to establish the possibility of a materialist and realist defence of the project of a natural science of history which escapes the fundamental flaws of both positivist and neo Kantian attempts at philosophical foundation      **The American Journal of Psychology** Granville Stanley Hall, Edward Bradford Titchener, Karl M. Dallenbach, Madison Bentley, Edwin Garrigues Boring, Margaret Floy Washburn, 1917      The Psychology of Gestalt Harry Helson, 1926      Resonance: From Probability To Epistemology And Back Krzysztof Burdzy, 2016-05-26 Resonance examines some building blocks of epistemology as a prelude to the careful analysis of the foundations of probability The concept of resonance is introduced to shed light on the philosophical problems of induction consciousness intelligence and free will The same concept is later applied to provide support for a new philosophical theory of probability Although based on existing ideas and theories the epistemological concept of resonance is investigated for the first time in this book The best known philosophical theories of probability frequency and subjective are shown to be unrealistic and dissociated from the two main branches of statistics frequency statistics and Bayesian statistics Written in an accessible style this book can be enjoyed by philosophers statisticians and mathematicians and also by anyone looking to expand their understanding of the disciplines of epistemology and probability      **The Two Fundamental Problems of the Theory of Knowledge** Karl Popper, 2014-05-01 In a letter of 1932 Karl Popper described Die beiden Grundprobleme der Erkenntnistheorie The Two Fundamental Problems of the Theory of Knowledge as a child of crises above all of the crisis of physics Finally available in English it is a major contribution to the philosophy of science epistemology and twentieth century philosophy generally The two fundamental problems of knowledge that lie at the centre of the book are the problem of

induction that although we are able to observe only a limited number of particular events science nevertheless advances unrestricted universal statements and the problem of demarcation which asks for a separating line between empirical science and non science Popper seeks to solve these two basic problems with his celebrated theory of falsifiability arguing that the inferences made in science are not inductive but deductive science does not start with observations and proceed to generalise them but with problems which it attacks with bold conjectures *The Two Fundamental Problems of the Theory of Knowledge* is essential reading for anyone interested in Karl Popper in the history and philosophy of science and in the methods and theories of science itself
