Plane-power ,1946 **How to Live Forever** Maurice S. Rawlings,Maurice Rawlings,2008-11 Barring devastating accidents and disseminated cancer man usually dies because of the failure of just one organ Theoretically through progressive replacement of failing organs man could live forever and veritably spout the fountain of youth for the first time in history However a critical four hour survival time between organ donor and recipient is a limiting factor for making organ replacement feasible To start the fountain flowing to offer transplantation on demand and to anticipate over flowing demands would require one of the greatest discoveries of the decade a simple means for organ preservation Through meticulous research and happenstance Dr Frederick Middleton does indeed discover a unique freeze dry formula to preserve organs without fracturing the cell walls so invariably typical of any freezing or thawing process But as with all things good a profiteering underworld soon corrupts the organ exchange business garnering fortunes from trusting recipients who hopefully would give most anything they own for one just more fling at life Within this milieu this struggle for life lies a stream of patients whose heart rending stories question traditional concepts for dealing with the dying UPDATED
