Mansoor, 2004-03-03 Secondary

forms of hypertension are not uncommon in clinical practice but they are often overlooked or forgotten by clinicians in many fields of medicine Dr George Mansoor's volume on Secondary Hypertension is an important contribution to the field of clinical hypertension and vascular diseases since it brings up to date the numerous diagnostic and therapeutic advances in the evaluation for secondary types of hypertension In the past textbooks usually stated that an etiology could be determined in less than 5% of patients presenting with newly diagnosed hypertension We now know this is far too low a proportion e.g. primary hyperaldosteronism alone may account for hypertension in 5% of patients presenting with chronic elevations in blood pressure Secondary Hypertension has been thoughtfully organized into chapters evaluating screening and diagnosis as well as medical and/or surgical intervention of the well known etiologies of secondary hypertension in adults and children Additional coverage is given to such exogenous or lesser appreciated causes of secondary hypertension as obstructive sleep apnea and drugs These sections make this book novel because in the past little attention has been paid to the effects of noncardiac drugs that interfere with antihypertensive therapy or to exogenous substances that might induce refractory hypertension

[Parkinson's Disease and Nonmotor Dysfunction](#) Ronald F. Pfeiffer, Ivan Bodis-Wollner, 2007-11-10 Parkinson's Disease and Nonmotor Dysfunction fills a major gap in the current rapidly growing body of knowledge concerning Parkinson's disease Drs Pfeiffer and Bodis-Wollner have correctly perceived that many nonmotor features of Parkinson's disease are given insufficient attention in the medical literature Unfortunately they are often also given insufficient attention by the practicing neurologists who see these patients As recently pointed out there is clearly much more to Parkinson's disease than depletion of the nigrostriatal dopamine system 1 Parkinson's disease not just multiple system atrophy is a multisystem disorder both pathologically and in its clinical manifestations This is clearly true for the various motor system abnormalities which are not fully corrected by dopamine replacement therapy strategies but also for the nonmotor system abnormalities that are the subject of this volume Although recently there has been increased awareness of the cognitive psychiatric and sleep disorders commonly associated with Parkinson's disease many of their manifestations remain underrecognized and their importance in managing patients is underestimated Even less attention is paid to the myriad of other nonmotor disturbances that plague these patients For example among the autonomic disorders although orthostatic hypotension is well recognized it is usually attributed to dopaminergic medications rather than to effects of the underlying disease Urologic disorders are also very familiar in these
