**Peripheral Neuropathies in Clinical Practice** Steven Herskovitz, Stephen Scelsa, Herbert Schaumburg, 2010-02-11 The last 2 decades have seen enormous strides in our understanding of the biological genetic and clinical basis of the peripheral nerve disorders This remains a difficult area for most practitioners This text combines a thorough review of the neurologic literature with clinical experience in presenting a comprehensive yet concise and readable approach to the understanding evaluation and management of these disorders All practitioners seeing these patients as well as all trainees in Neurology and related fields should find this a useful approachable initial resource Peripheral Neuropathies Mark B.

Bromberg, 2018-04-26 Do you find the evaluation of a patient presenting clinical symptoms of distal extremity numbness and weakness daunting and complex Are you unsure of the diagnostic processes and best practices in the treatment of peripheral neuropathy This invaluable guide presents a practical approach to the diagnosis and successful management of patients with peripheral neuropathies Starting with a structured series of patient queries for symptoms and examination signs the diagnostic process emphasizes the role of electrodiagnostic tests in defining the neuropathy Specific neuropathies are presented with their epidemiology causative pathology diagnostic and laboratory factors alongside advised treatments and overall management strategies This leading resource will assist non neuromuscular neurologists physiatrists neurology and physiatry residents and will also be useful to electromyographers proving an ideal aid for busy clinic schedules

**Peripheral Neuropathy & Neuropathic Pain** Professor Gérard Said, 2014-09-01 Written by one of the world's leading experts Professor Gérard Said MD FRCP Dpt de Neurologie H pital de la Salp tri re Paris France Peripheral neuropathy is a common medical condition the diagnosis of which is often protracted or delayed It is not always easy to relate a neuropathy to a specific cause Many people do not receive a full diagnosis their neuropathy often being described as idiopathic or cryptogenic It is said that in Europe one of the most common causes is diabetes mellitus but there are also many other known potential causes The difficulty of diagnosis the limited number of treatment options a perceived lack of knowledge of the subject except in specialised clinics the number of which are limited all add to the difficulties which many neuropathy patients have to face Another additional problem for many patients is that once having received a full or even a partial diagnosis they are then often discharged back to their primary healthcare team who in many instances know little about this condition and how it may impact upon their patients lives In order to help bridge this gap in medical knowledge and to give healthcare providers a better understanding of this often distressing condition The Neuropathy Trust has commissioned a new book on this complex topic Written by one of the world's leading experts on neuropathy Professor Gérard Said it is a must read and also a handy reference book for doctors nurses physiotherapists chiropractors podiatrists and other health professionals As well as covering the anatomy of the nervous system and the basic pathological processes that may affect the peripheral nerves the book covers a whole range of neuropathic conditions These include for example Guillain Barré syndrome

chronic inflammatory demyelinating polyneuropathy vasculitic neuropathies infectious neuropathies diabetic and other metabolic neuropathies hereditary neuropathies and neuropathies in patients with cancer Given the almost explosive increase in diabetes predicted over the coming years and the high incidence of HIV infections alone not to mention all the other possible causes of peripheral neuropathy no self respecting medical unit should be without a copy of this new book on their shelves The author Professor Gerard Said is based in the Department of Neurology at the prestigious Hôpital de la Salpêtrière in Paris He has devoted a lifetime to the study of peripheral neuropathy and alongside other great neurological names added much to the world's ever growing store of knowledge on this complex but fascinating condition which affects so many individuals

**Innovative Approaches to Overcome Resistance and Toxicities of Anti-Cancer Drugs** Awanish Mishra, Dayanidhi Raman, Valeria Consoli, 2025-08-18 Although diagnosis and treatment of various cancer types have made significant strides recently drug resistance is a major challenge faced in the cancer clinic Cancer cells evolve continuously through a combination of genetic mutations epigenetic changes support from cellular and acellular tumour microenvironment The chemoresistant tumour cells expand and become the dominant population and at this point it becomes difficult to treat The cancer cell heterogeneity is also a major contributing factor to chemoresistance The other challenge faced is the development of adverse events due to drug toxicity which is overwhelming especially for immunocompromised patients Collectively these factors reduce the treatment response and overall survival Current neoadjuvant chemotherapy NACT and targeted therapies aim at drug efficacy with minimal toxicity

along with employment of adjuvant immunotherapy Potential exploits include novel drug delivery platforms such as antibody drug conjugates combination therapies that target addicted signalling pathways transcription factors utilization of long noncoding RNAs including siRNA and miRNA using nanocarriers reprogramming the tumour immune microenvironment TIME employment of in silico approaches from docking drug like molecules to crystal structures of novel targets bioinformatics and machine learning approaches These approaches hold immense potential to enhance cancer therapeutics while minimizing toxicities These strategies aim to amplify therapy impact while minimizing toxicity leading to better patient outcome This research topic welcomes data and review articles on the following sub topics but are not limited to 1 Novel molecular targets targeting of signalling pathways transcription and epigenetic factors proteomic metabolomic and single cell analyses of therapy naive and chemoresistant tumour cell populations 2 Role of non coding RNAs and microRNAs in chemoresistance 3 Advancements in tumour immune microenvironment TIME and therapies taking advantage of reprogramming the TIME 3 Novel synthetic and natural derived compounds for targeted therapy to improve anti cancer efficacy overcoming resistance and minimizing toxicities 4 Cancer stem or stem like cells in creation of minimal residual disease and induction of drug resistance cancer stemness factors that induce and orchestrate chemoresistance 5 Bioinformatics in silico studies and machine learning in design for the study of novel molecules to enhance efficacy and overcome resistance to anticancer drugs and toxicities In silico results should be validated through the exploitation of experimental methodologies

Antonio E. Puente, Robert J. McCaffrey, 2013-11-11 The growth of clinical neuropsychology has been unprecedented This growth has been oriented more toward the provision of than toward the foundation for services Thus while a greater number of psychologists are performing a greater number of neuropsychological procedures there seems to us an uneven parallel growth between these services and the empirical foundations for them It should come to no one's surprise that increasingly aggressive attacks on the field have been leveled Despite these attacks clinical neuropsychology continues to enjoy exceptional growth within psychology and acceptance by other health practitioners insurance companies legislators judges juries and above all consumers of our services Growth without self reflection is a dangerous enterprise as is growth without directions We find it disconcerting that existing and limited self analysis has assumed that neuropsychological dysfunction is immune to the same variables that affect psychological dysfunction Some attention has been paid to the most obvious ones such as age but all others have been ignored and or misunderstood This neglect has spawned a body of knowledge replete with questionable data and unfounded conclusions Hence it is surprising that clinical neuropsychologists consider themselves to be more scientifically sound than their regular clinical counterparts *NINCDS Index to Research Grants Subject Number Investigator & Contracts* National Institute of Neurological and Communicative Disorders and Stroke,
