Permanent Setting Of Wool:

Permanent Setting of Wool A. J. Farnworth, J. Delmenico, 1971 *Woollen Spinning, Weaving, Knitting, Dyeing, Bleaching and Printing Technology Handbook* NPCB Board of Consultants & Engineers, 2009-10-01

Spinning is a major industry it is part of the textile manufacturing process where three types of fibre are converted into yarn then fabric then textiles. The textiles are then fabricated into clothes or other artifacts. The fundamental operations for the stocks of fibers from which a woollen yarn is made are opening, cleaning, mixing, forming a slubbing or roving and finally thinning the roving to the required yarn number and twisting it to produce a yarn possessing the requirements for subsequent processing such as warping, winding, weaving, finishing and dyeing. These demands vary with the different conditions confronted in manufacturing but include the following features: strength, elasticity, uniformity in weight per unit length and even distribution of twist. Woollen spinning involves three principal operations irrespective of whether the mule or the frame or ring spinner is used: namely Drafting, final drawing out, Twisting or insertion of twist, Winding on or packaging. Weaving constitutes the actual production of cloth or fabric i.e. to combine the essentially one dimensional textile structure thread or yarn in such a way as to result in an essentially two dimensional structure of cloth of certain appearance, hand and strength. Knitting is the art and science of constructing a fabric by interlacing loops; there are two types of knitting: warp and weft knitting. In recent years whole new classes of dyes such as fiber reactive, disperse, cationic, basic, neutral, dyeing, premetalized have been discovered and produced for the dyeing of the natural and new synthetic hydrophobic fibers. Bleaching improves whiteness by removing natural coloration and remaining trace impurities from the cotton; the degree of bleaching necessary is determined by the required whiteness and absorbency. Cotton being a vegetable fibre will be bleached using an oxidizing agent such as dilute sodium hypochlorite or dilute hydrogen peroxide. If the fabric is to be dyed a deep shade then lower levels of bleaching are acceptable for example. However for white bed sheetings and medical applications the highest levels of whiteness and absorbency are essential. Wool fiber production technology necessitates full understanding of its growth, pristine structure, physical, chemical and functional properties as well as processes involving manufacture of textile fibers. Some of the fundamentals of the book are: woollen spinning, atmospheric conditions in wool manufacturing, Bradford system, top gilling or top finishing, the principle of weaving, woollen and worsted weaves, knitting, the changing outlook of the knitting industry, influence of fiber fineness on quantity of dye required, altering the affinity of the wool fiber for dyes, dyeing of yarn according to the packing system, special wool finishes, water repellent, stain resistant treatments for worsted and woollen fabrics, the printing of wool piece goods, lustering of wool fabrics, fluorochemicals, mothproofing etc. The present book is of its own kind which covers woollen spinning, knitting, dyeing, bleaching and printing, special wool finishes etc. This is an important reference book for wool technologists, scientists, new entrepreneurs, research scholars and all others related to this field. The Coloration of Wool and Other Keratin Fibres David M. Lewis, John A. Rippon, 2013-05-20. Keratin fibres, particularly wool fibres, constitute an important natural raw material in textiles due to their comfort and thermal properties. Wool coloration demands an understanding of the complex nature of the interplay between wool fibre chemistry, morphology, and the coloration processes. The Coloration of Wool and Other Keratin Fibres is a comprehensive treatment written by leading international experts of the chemistry and chemical processes involved in wool dyeing, printing, preparation, and finishing. The book covers the chemical and physical structure of wool keratin fibres, detailing their complex heterogeneity and the subtle links between fibre structure and dyeability. The coloration of fabrics containing wool, including a variety of wool blends such as wool/silk, wool/polyester, and wool/cotton, and luxury keratin fibres such as mohair, cashmere, and camel, the chemistry of the various types of dyes utilised in wool dyeing, and in-depth discussions on the physical properties to optimise these processes, practical application of dyes to wool in all its forms (loose stock, combed tops, yarns, and piece goods) is covered in the chapter on wool dyeing machinery. Two chapters, one on bleaching and whitening and

one on dyeing human hair provide a valuable extension to the topic of cosmetic chemistry The Coloration of Wool and other Keratin Fibres is essential reading for professionals world wide working in companies involved in the dyeing and printing of wool wool blends and other keratin fibres and also for the producers of dyes and auxiliary dyeing agents It is a valuable resource for teachers and students of universities and technical institutes as well as for researchers who are focusing their investigations on wool wool blends human hair or dyes and auxiliaries Published in partnership with the Society of Dyers and Colourists SDC Find out more at <http://www.wiley.com/go/sdc>
