Pershing A History Of The American Medium Tank T20 Series:

Pershing R. P. Hunnicutt, 1996 **Pershing** R. P. Hunnicutt, 2015-09-15 This comprehensive entry in R P Hunnicutt's 10 volume compendium of American tank history details the development of the T20 series of American tank prototypes ending with the standardized M26 Pershing. Although the M4 Medium Tank Sherman proved itself by contributing mightily to U S Armored divisions in WWII, it was eventually outclassed by some later German armored vehicles. Furthermore, due to its prewar development, the Sherman was designed using components developed on a shoestring budget. In an effort to address these shortcomings and to take advantage of lessons learned on the battlefield, a program was launched in the spring of 1942 to develop an improved tank. This program resulted in the T20 series of tanks which included a number of experimental prototypes that capitalized on advances made in engineering in the years since the design of the Sherman. True to form, Hunnicutt spares no detail in his blow-by-blow history of the T20 series. The original T20 concept was expansive, beginning with investigations into a wide range of power trains, armaments, and suspensions. Hunnicutt carefully details each of the prototypes produced over the three years of development. Each experimental tank is illustrated with photographs and figures. The T20 series concluded with the deployment of the T26E3 General Pershing in the closing months of the European War. A number of Pershing tanks played a dramatic role in the 9th Armored Division's struggle to take the Ludendorff Bridge at the Battle of Remagen. After this baptism by fire, the Pershing was standardized as the M26 in late March 1945. The Pershing tank served as the Army's first line tank during the immediate postwar period and played a major part in the first year of the Korean War, although it revealed itself to be poorly suited for use on Korea's muddy and hilly terrain. With detailed diagrams and photographs along with an extensive collection of reference data, Hunnicutt's *Pershing* is an absolute must-have for anyone with a keen interest in American military history. American Thunder Richard C. Anderson Jr., 2024-05-14 This book is a colorful, vivid, and insightful look at how the U S produced a tank force capable of conducting its own battlefield efforts and sustaining key allies around the world during World War II. It will be the go-to volume on American tanks for years to come. *Modelling US World War II Armoured Fighting Vehicles* Tom Cole, 2022-03-21 Aimed at military model makers and wargamers who are interested in the armoured fighting vehicles of the United States as used throughout World War II, this book follows on from *Modelling British World War II Armoured Vehicles* by the same author. The book places its emphasis on US Army and US Marine Corps AFVs modelled mainly in 1/72 and 1/48 scales in a deliberate departure from the more popular 1/35 scale to encourage and inspire model makers who are new to or less familiar with these scales. Illustrated with over 270 colour photos, this book features every

major US AFV used in World War II with many models shown in various stages of construction and paintings. It presents step by step guides demonstrating the painting techniques appropriate for different scales and includes an additional section showing how to paint wargames models. There is also a review of how the USA developed tanks and other armoured vehicles from the interwar period through to the end of World War II. This fascinating story will help model makers and wargamers give the vehicles they build an historical context.

American Tanks & AFVs of World War II Michael Green, 2014-07-20 A comprehensive highly illustrated study of US tanks and other armoured vehicles used in World War II. The entry of the US into World War II provided the Allies with the industrial might to finally take the war to German and Japanese forces across the world. Central to this was the focus of the American military industrial complex on the manufacture of tanks and armoured fighting vehicles. Between 1939 and 1945 88 140 tanks and 18 620 other armored vehicles were built almost twice the number that Germany and Great Britain combined were able to supply. In this lavishly illustrated volume armour expert Michael Green examines the dizzying array of machinery fielded by the US Army from the famed M4 Sherman M3 Stuart and M3 Lee through to the half tracks armored cars self propelled artillery tank destroyers armored recovery vehicles and tracked landing vehicles that provided the armoured fist that the Allies needed to break Axis resistance in Europe and the Pacific. Publishing in paperback for the first time and packed with historical and contemporary colour photography this encyclopedic new study details the design development and construction of these vehicles their deployment in battle and the impact that they had on the outcome of the war.

Reasons To Improve: The Evolution Of The US Tank From 1945-1991 Major Anthony I. Bailey, 2014-08-15 The American primary tank in the Second World War was inferior to its German counterpart for all but the final months of the war. The U S tank evolved and demonstrated its superiority to the world in Operation DESERT STORM in 1991. This monograph examines the evolution of America's primary tank in the years between 1945 and 1991 focusing on three periods the Second World War the Korean War and the 1973 Arab Israeli War. Each period examines the adversary America's industrial capabilities and the combat environment. Describing the adversary highlights there is a tangible threat to U S armored forces. In the face of this threat the United States remained capable of building new more complicated and more expensive tanks which demonstrates the industrial endowment required to meet the demands of the threat. An examination of the combat environment reveals why the U S Army and its armor force seemed so fixated on Europe as the next war's first battlefield. Ultimately this paper serves to demonstrate that a tank series such as the M1 Abrams family is a required component in the U S Army's combined arms arsenal. As such it is important that the aging Abrams having served the Army in Operation Desert Storm and the Global War on Terror continue to evolve in preparation for the next war.
