Jeff Dondero

Rising Seas:

Rising Seas Vivien Gornitz, 2013 The Earth's climate is already warming due to increased concentrations of human produced greenhouse gases in the atmosphere and the specter of rising sea level is one of global warming's most far reaching threats Sea level will keep rising long after greenhouse gas emissions have ceased because of the delay in penetration of surface warming to the ocean depths and because of the slow dissipation of excess atmospheric carbon dioxide Adopting a long perspective that interprets sea level changes both underway and expected in the near future Vivien Gornitz completes a highly relevant and necessary study of an unprecedented age in Earth's history Gornitz consults past climate archives to help better anticipate future developments and prepare for them more effectively She focuses on several understudied historical events including the Paleocene Eocene Thermal Anomaly the Messinian salinity crisis the rapid filling of the Black Sea which may have inspired the story of Noah's flood and the Storrega submarine slide an incident possibly connected to a sea level occurrence roughly 8 000 years old By examining dramatic variations in past sea level and climate Gornitz concretizes the potential consequences of rapid human induced warming She builds historical precedent for coastal hazards associated with a higher ocean level such as increased damage from storm surge flooding even if storm characteristics remain unchanged Citing the examples of Rotterdam London New York City and other forward looking urban centers that are effectively preparing for higher sea level Gornitz also delineates the difficult economic and political choices of curbing carbon emissions while underscoring through past geological analysis the urgent need to do so

Rising Seas Martin Ince, 2013-11-05 Recent and dramatic flooding in places as far apart as Bangladesh and North Wales are example of what could become commonplace if sea levels rise Most scientists are predicting a rise of about one metre and this book based on research carried out for the Commonwealth governments describes in simple terms what is likely to happen as a result and where the worst effects will be Martin Ince a well known scientific journalist deals with the accuracy of our knowledge and the possible errors in assessment He considers the different kinds of damage that higher seas could cause inundation increased salination coral damage increased flood and surge damage and so on Brief case studies are included covering the UK the Maldives North America Bangladesh Guyana Kiribati The Netherlands Italy Egypt and Australasia The book ends with an examination of the scientific and technical developments which could make the problems easier to deal with and above all set out the policies on which governments must agree Originally published in 1990

Vanishing Lands: The Human Impact of Rising Seas Tom Finn, The world is awash in a tide of change and at the heart of this transformation lies the relentless rise of the sea *Vanishing Lands: The Human Impact of Rising Seas* embarks on a journey to the frontlines of this escalating crisis a journey that weaves together scientific insights with the poignant narratives of those living with the consequences of a warming planet Imagine a world where familiar coastlines retreat where once bustling communities are forced to relocate and where the very land beneath our feet becomes a precarious battleground against the forces of nature

This is the reality facing millions around the globe a reality shaped by the relentless rise of sea levels driven by climate change This book is not merely an examination of scientific data it is an exploration of the human cost of a changing planet We will delve into the science behind the surge from the melting glaciers and ice caps to the intricate workings of ocean currents and thermal expansion But beyond the scientific explanations we will meet the individuals and communities whose lives are being profoundly impacted by these changes Their stories serve as a powerful reminder of the urgency of climate action and the need for collective action Through vivid accounts in depth analysis and insightful perspectives Vanishing Lands aims to bridge the gap between scientific knowledge and human experience It is a testament to the courage resilience and ingenuity of those grappling with a changing world Ultimately it is a call for us all to engage with this critical issue to embrace solutions that foster adaptation and to strive for a future where vanishing lands become a reminder of the importance of our shared responsibility to safeguard our planet

Responding to Rising Seas OECD Country

Approaches to Tackling Coastal Risks OECD,2019-03-06 There is an urgent need to ensure that coastal areas are adapting to the impacts of climate change Risks in these areas are projected to increase because of rising sea levels and development pressures This report reviews how OECD countries can use their national adaptation planning processes

Rising Sea Levels Hunt Janin,Scott A. Mandia,2012-10-25 The fundamental point of this book is that in the past the world s political economic military and social development took place during a time of relatively stable sea level That time however is now over The world must begin to cope with rising seas This book is a wide ranging introductory survey It addresses global warming the hydrologic cycle why we should care about the rise of the oceans storm surges and other extreme events the changing seas and their shorelines cities and countries of the Atlantic Pacific and Indian ocean basins the West Antarctic Ice Sheet and the Greenland Ice Sheet case studies on how the Netherlands and the U S plan to cope with sea level rise the likely impacts of this rise getting to know the experts on sea level rise and very long term prospects for the world s shorelines

Climate Change and Rising Sea Levels Kevin Kurtz,2019-01-01 Rapidly increasing sea levels are endangering coastal wildlife and contributing to major floods worldwide In the future some coastal cities may even be underwater But what is behind this dramatic shift Learn all about the role climate change plays in rising ocean levels and what effects this will have on our watery planet

Rising Seas Vivien Gornitz,2013-03-12 The Earth s climate is already warming due to increased concentrations of human produced greenhouse gases in the atmosphere and the specter of rising sea level is one of global warming s most far reaching threats Sea level will keep rising long after greenhouse gas emissions have ceased because of the delay in penetration of surface warming to the ocean depths and because of the slow dissipation of excess atmospheric carbon dioxide Adopting a long perspective that interprets sea level changes both underway and expected in the near future Vivien Gornitz completes a highly relevant and necessary study of an unprecedented age in Earth s history Gornitz consults past climate archives to help better anticipate future developments and prepare for them more

effectively She focuses on several understudied historical events including the Paleocene Eocene Thermal Anomaly the Messinian salinity crisis the rapid filling of the Black Sea which may have inspired the story of Noah's flood and the Storrega submarine slide an incident possibly connected to a sea level occurrence roughly 8 000 years old By examining dramatic variations in past sea level and climate Gornitz concretizes the potential consequences of rapid human induced warming She builds historical precedent for coastal hazards associated with a higher ocean level such as increased damage from storm surge flooding even if storm characteristics remain unchanged Citing the examples of Rotterdam London New York City and other forward looking urban centers that are effectively preparing for higher sea level Gornitz also delineates the difficult economic and political choices of curbing carbon emissions while underscoring through past geological analysis the urgent need to do so

Supercities On, Under, and Beyond the Earth Jeff Dondero, 2020-02-08 As more and more people inhabit the Earth and live longer on it Super Cities will explode with populations of 20 30 even 100 millions or more But how will these cities accommodate such masses Who will build them and where How can they be sustained and their inhabitants provided for Here Jeff Dondero imagines the super cities of the future and explores the ways in which they can be sustainably built how transportation will move masses of people without cars how people will be fed and where waste will go and how we will move to cities underground under the sea in the atmosphere into space and on to other planets It describes some of the smart systems for buildings and homes and some of the new ways food and materials enough for such masses will be supplied Will super cities be the answer to our bursting population And if they will how can we best sustain and supply them Dondero offers suggestions and a blueprint for the future
