

OPERATIONALISING ONE WELFARE¹ INTO GLOBAL POLICYMAKING TO PREVENT ZOOONOTIC DISEASE RISK

Wild animal health and welfare need to be prioritised as cross cutting themes in policymaking, accompanied by urgent reforms in international animal and public health laws.

Human activities such as wildlife trade (both legal and illegal), live animal markets, intensive animal agriculture and fur farming inevitably lead to crowding, stress and injury among animals. The close proximity between people and animals during capture, farming, transportation, butchering and trade presents numerous and unpredictable opportunities for pathogens to spread and undergo mutations, leading to the emergence of zoonotic diseases with pandemic potential.

By focussing on primary prevention, One Welfare principles offer cross-disciplinary solutions to address the common drivers of biodiversity loss and climate change, and mobilise relevant sectors, disciplines and communities to reduce future zoonotic disease risk.

Reducing and eliminating high-risk human activities such as the taking, holding, trade, marketing, use and consumption of both wild and domestic animals that pose a risk to public health are vital to tackle the root causes of zoonotic disease transmission. Such mechanisms and measures to prevent pathogen emergence at source must be incorporated into the new global instrument negotiated under the World Health Organisation.

“Curbing the emergence of zoonotic diseases is complex and requires a holistic approach. Measures to prevent the unsustainable exploitation of wildlife, and improvements in the enforcement and regulation of wildlife conservation, animal welfare and public health regulations are also part of the solution.”

2021, *Geographic Review*

“It is estimated that 75% of Emerging Infectious Diseases are zoonotic and, of these, 70% originate in wildlife populations.”

James et al. (2006), Global trends in emerging infectious diseases, *Nature*, 439 (7171), pp. 900-903

“An estimated 1.2 million currently undiscovered viruses are thought to exist in mammal and avian hosts. Of these, 801,000–827,000 could have the ability to infect humans.”

Preventative measures – such as cracking down on the wildlife trade – would cost between \$21bn and \$31bn annually, a fraction of the economic cost of coping with a pandemic like Covid-19 (which is estimated at the time would cost \$16 trillion by summer 2021).

Risk and Responsibility William Leiss, Christina Chociolko, 1994-06-09 William Leiss and Christina Chociolko explain that controversies arise in part because many participants try to avoid assuming full responsibility for the consequences of the risk taking they advocate For example one can indulge in the pleasure of nicotine addiction despite an awareness of the health risks and count on a publicly funded health care system to assume the responsibility for dealing with the resulting illnesses They provide detailed case studies of the controversies over the effects of exposure to power frequency electric and magnetic fields and to the chemical pesticides alar and antisapstains Shorter studies of exposure to tobacco formaldehyde and the pesticide alachlor are also presented The authors address the difficulties of arriving at reliable scientific estimates of risk in

such controversial areas and the impact of this uncertainty on disagreements among different interest groups over how to manage those risks responsibly In conclusion they attempt to delineate conditions under which consensus on the assessment and management of environmental health risks might be achieved among a wide range of interest groups Risk and Responsibility will be of specific interest to policymakers and analysts activists and environmentalists and of general interest to those working in relevant industries and members of the legal profession **The Massachusetts register** ,1993-07-30
