showing how it is more dominant more demanding and more global than ever before Heather Widdows argues that our perception of the self is changing More and more we locate the self in the body not just our actual flawed bodies but our transforming and imagined ones As this happens we further embrace the beauty ideal Nobody is firm enough thin enough smooth enough or buff enough not without significant effort and cosmetic intervention And as more demanding practices become the norm more will be required of us and the beauty ideal will be harder and harder to resist If you have ever felt the urge to make the best of yourself or worried that you were letting yourself go this book explains why Perfect Me examines how the beauty ideal has come to define how we see ourselves and others and how we structure our daily practices and how it entralls us with promises of the good life that are dubious at best Perfect Me demonstrates that we must first recognize the ethical nature of the beauty ideal if we are ever to address its harms

Geriatric Anesthesiology J. G. Reves, Sheila Ryan Barnett, Julie R. McSwain, G. Alec Rooke, 2017-10-27 Surgical and anesthetic techniques have evolved to allow a growing number of older adults to undergo surgery and current estimates are

that 50% of Americans over the age of 65 years old will have an operation. However, as the knowledge regarding perioperative care of the elderly surgical patient grows, so do the questions. In this edition, each chapter includes a section entitled "Gaps in Our Knowledge" meant to highlight areas in which research is needed as well as hopefully inspire readers to begin solving some of these questions themselves. Building upon the strong foundation of the first two editions, *Geriatric Anesthesiology* 3rd edition also assembles the most up-to-date information in geriatric anesthesia and provides anesthesiologists with important new developments. Topics covered include several new chapters that reflect the evolution of multidisciplinary geriatric care throughout the perioperative continuum as well as the growing body of literature related to prehabilitation. In addition, discussion of the surgeon's perspective and geriatrician's perspective on surgery in the geriatric population is covered as well as the systematic physiologic changes associated with aging and the pharmacologic considerations for the geriatric patient undergoing procedures. Finally, the last section discusses postoperative care specific to the geriatric population, including acute pain management, ICU management, recent evidence, and up-to-date practice regarding delirium and postoperative cognitive dysfunction and palliative care.
