[Garden Plants Taxonomy](#) Bijan Dehgan, 2023-01-01 Horticulture has remained far behind in understanding of botanical principles Recent phylogenetic DNA based reorganization of higher plants has revolutionized taxonomic treatments of all biological entities even when morphology does not completely agree with their organization This book is an example of applying principles of botanical phylogenetic taxonomy to assemble genera species and cultivars of 200 vascular plant families of ferns gymnosperms and angiosperms that are cultivated for enhancement of human living space homes gardens and parks The emphases are on cultivated species but examples of some plants are often shown in the wild and in landscapes In providing descriptions it is assumed that students and other interested individuals have no background in general botany plant characteristics or nomenclature Fundamental features of all plant groups discussed are fully illustrated by original watercolor drawings or photographs Discussion of the families is grounded on recent botanical phylogenetic treatments which is based on common ancestry monophyly Of course phylogenetic taxonomy is not a new concept and was originally based on morphological

characteristics it is the DNA based phylogeny that has revolutionized modern biological classifications In practical terms this book represents the horticultural treatment that corresponds to phylogenetic based botanical taxonomy to which is added cultigens and cultivated genera and species Hence the harmony between horticultural and botanical taxonomy This book covers phylogenetic based taxonomy of Ferns Gymnosperms and Angiosperms Monocots A companion volume covers Angiosperms Eudicots      **Catalogue of the Books, Manuscripts, Maps and Drawings in the British Museum (Natural History) ...** British Museum (Natural History).
