The Changing Wildlife of Great Britain and Ireland David L. Hawksworth, 2003-06-26 Periodic comprehensive overviews of the status of the diverse organisms that make up wildlife are essential to determining trends threats and future prospects Just over 25 years ago leading authorities on different kinds of wildlife came together to prepare an assessment of their status of a wide range of organisms in Great Britain and Ireland in *The Changing Flora and Fauna of Britain* also edited by Professor David L Hawksworth CBE Now in *The Changing Wildlife of Great Britain and Ireland* he has gathered together some of the original and also new contributors to review changes since that time and look to the future Contributions range from viruses diatoms fungi lichens mites and nematodes through butterflies dragonflies flies and slugs to flowering plants ferns mammals birds and fish The state of knowledge in different groups is assessed and the effectiveness of statutory and other measures taken to safeguard wildlife considered The picture is far from bleak ameliorating sulphur dioxide levels have benefited sensitive lichens and mosses in a dramatic way water quality improvement has been beneficial there have been few certain extinctions and rediscoveries of species thought to have been lost Biodiversity Action Plans have also benefited targeted species but habitat restoration and management for some is not always good for others But there are worrying trends in declining populations with an increasing number being regarded as threatened or endangered especially in agricultural areas and where woodland management has changed particular threats from introduced species and concern over the effects of climate change Some of the smaller organisms remain poorly known a situation unlikely to change as expertise in many is scant or being lost This stock check and look to the future will be a key source book to conservationists naturalists and professional biologists for many years to come **Bird Life of Woodland and Forest** Robert J. Fuller, 2003-11-20 Describes the factors affecting the bird life of woodland and the effects of habitat management **Bird Life of Mountain and Upland** D. A. Ratcliffe, Derek A. Ratcliffe, 2010-06-10 This book describes the bird life of the various upland regions of the British Isles from a ecological standpoint *Birds and Forestry* Mark Avery, Roderick Leslie, 2010-10-30 In this book an ornithologist and a forester have combined their skills to try and tease out the real facts behind the various arguments on forestry The conflict between forestry and nature conservation has become a major environmental issue in Britain in the 1980s The planting of large tracts of land with exotic conifers and the resulting disturbance of existing plant and animal communities has polarized the debate each camp believing that it has the most rational view But the interactions involved are complex Which bird species are really threatened How can we judge the relative value of bird species ousted by plantations and the new species which colonize them How can the need for forest products be reconciled with the demands of conservationists This fascinating book tackles these issues in a forthright manner It represents a significant step towards achieving the sort of prudent land planning that will really improve our beleaguered

countryside Jacket painting by Philip Snow Foreword by David Bellamy Interactions Between Fish and Birds Ian G. Cowx, 2008-04-15 The interactions between wild bird populations many protected by law and fish particularly those under commercial culture or part of a fishery is subject of much controversy Ecological environmental and conservation pressures run alongside commercial pressures on exploited fish populations This exciting book draws together contributions from all over the world to provide a fascinating insight into many case studies and conflicts in managed situations as well as looking at the overall ecology of such interactions in normal un managed ecosystems Habitat Creation and Repair O. L. Gilbert, Penny Anderson, 1998 With increasing public awareness of environmental issues landscape managers and developers are being required to create substantial areas of naturalistic planting particularly in urban areas and to restore habitats degraded by building development or overuse This book provides the definitive guide to habitat creation and repair ranging from ethics theory and principles to the practical detail of designing habitats for wildlife The authors who have been working and teaching in the field for many years draw on a wealth of practical experience as well as an in depth knowledge of the existing widely scattered literature to provide an authoritative and accessible account of this rapidly developing subject From coastal and freshwater ecosystems to mountains forest and grasslands the book spans all of the major types of habitat to be found in the UK Oliver Gilbert and Penny Anderson give advice on deciding when habitat creation is the correct path to follow and then cover all steps from site survey through to the final design and actual realization of the scheme For each habitat the authors describe the options problems and solutions most likely to be encountered and give examples of good and bad habitat creation in practice drawn from the UK and other countries Habitat Creation and Repair is the first comprehensive guide to habitat creation to be published for several years It will be a key text for advanced undergraduate and postgraduate courses in ecology landscape architecture resource management and environmental science With habitat conservation creation and repair increasingly a priority amongst planners developers and policy makers this book will also be welcomed by professional ecologists environmental consultants resource managers and landscape architects Wetland Management R. A. Falconer, P. Goodwin, 1994 In recent years there has been growing concern about the management of wetlands particularly in the USA and increasingly in Europe These wetlands ranging from a small harbour such as Christchurch in the UK to the large mangrove swamps of Malaysia are natural resources which require comprehensive management Whilst considerable research has been undertaken and documented on the management of wetland ecosystems little emphasis has been focused on the geomorphic hydraulic and hydrologic behaviour of wetlands and the consequent implications for practical management solutions Ireland's Wetland Wealth Ralph Sheppard, 1993 Bird Census Techniques Colin J. Bibby, Neil D. Burgess, David A. Hill, 2012-12-02 Wild birds are counted for a wide variety of reasons and by a bewildering array of methods However detailed descriptions of the techniques used and the rationale adopted are scattered in the literature and the newcomer to bird census work or the experienced bird counter in search of a wider view

may well have difficulty in coming to grips with the subject as a whole While not an end in itself numerical and distributional census work is a fundamental part of many scientific and conservation studies and one in which the application of given standards is vital if results are not to be distorted or applied in a misleading way This book provides a concise guide to the various census techniques and to the opportunities and pitfalls which each entails The common methods are described in detail and illustrated through an abundance of diagrams showing examples of actual and theoretical census studies Anyone with a bird census job to plan should be able to select the method best suited to the study at hand and to apply it to best effect within the limits inherent in it and the constraints of the particular study The Royal Society for the Protection of Birds and the British Trust for Ornithology have for many years pioneered the collaboration of amateurs and professionals in various census studies Three members of their staff each with extensive field experience now pool the knowledge of these investigations to lay the groundwork for sound census work in future years

Birds in England Andy Brown, Phil Grice, 2010-06-30 The Poyser avifaunas Birds in Scotland Birds in Ireland and Birds in Wales are all now regarded as classic works The series is now completed with Birds in England an avifauna for England's diverse birdlife past and present England marks the northwestern limit for many Palearctic breeding birds and is close to the southwestern limit for several others in particular several seabird species whose English colonies are of international significance It is the first point of arrival for new colonists from the south Little Egret and Yellow legged Gull are two recent arrivals and it is also of international importance for wintering and passage populations of various species which breed in the far north of the Palearctic A diverse and fascinating avifauna is augmented by visits from an impressive range of rarities from as far afield as Siberia and Canada Nearctic vagrants in particular are well represented on the English list This important new avifauna looks in detail at England and its birds analysing present and historical data to present a complete picture of the status range and abundance of every bird on the English list

Atlas of the Dragonflies of Britain and Ireland Robert Merritt, Norman Winfrid Moore, Brian Eversham, Brian C. Eversham, Institute of Terrestrial Ecology, 1996 This volume contains a complete set of distribution maps and information on all the resident and more frequent immigration dragonflies in Britain and Ireland It takes a look at the present and changing status of dragonfly species provides insight into their distribution gives descriptions to aid recognition and summarizes aspects of behaviour and details of habitat The information for the atlas comes from the Recording Scheme set up at the Biological Records Centre 25 years ago which apart from deepening our understanding of dragonflies has focused attention on the need for conservation measures This book includes important and notable discoveries made in the course of the research and provides a history of conservation in Britain and Ireland and the context and rationale for future efforts It is a book which should be of interest not only to amateur naturalists and fieldworkers but also students and professional biologists

The Lapwing Michael Shrubbs, 2009-01-01 A detailed authoritative yet highly readable monograph on one of Britain's best loved farmland birds the Lapwing With its striking green black and white

plumage and distinctive pee wit call the Lapwing is one of Britain's best known birds Lapwings depend on agricultural land to breed and are considered a barometer of the health of this habitat the population has crashed over recent decades partly due to changes in farming practices In winter Lapwings switch to coastal areas and to wetlands including those in suburban areas where large noisy flocks can gather Michael Shrubbs's *The Lapwing* is a thorough review of Lapwing biology contains sections on population dynamics feeding ecology habitat use migration and conservation there is an impressively detailed review of our current understanding of breeding biology plus discussion of some other species in the genus *The Lapwing* is a superb addition to the Poyser list Of interest to both amateur naturalists who will enjoy insights into the bird's life and to academics who will appreciate the broad overview of current research this title will remain the definitive work on the species for many years to come *Methods of Environmental Impact Assessment* Peter Morris, Riki Therivel, 2001 Written by experts this text deals with how environmental impact assessment should be carried out for specific environmental components such as air and water **Coastal Recreation Management** Tim Goodhead, Johnson, 2013-10-08 The maritime environment includes both the water resource of the terrestrial coast and estuarine and coastal inshore waters This book for undergraduate students and those training in the field relates the need to manage water based leisure activities with the need to manage the maritime environment on which they depend **Scottish Birds** , 2001 Agri-environmental Policy in the European Union Henry Buller, Geoff Wilson, Andrea Holl, 2017-11-01 This title was first published in 2000 This volume provides a detailed examination of agri environmental policy within ten European states Individual chapters consider the agricultural and environmental policy contexts within each state and examine the range and significance of agri environmental policy proposed in addition to their spatial and territorial impact their policy making implications and their consequences for the structures institutions and actors of national farming policy both across and within national borders Drawing from ten national profiles and the data sets provided the book provides a comparative analysis of implementation trends filling a gap in the literature on this topic Taking European legislation as its starting point the comparative section of the book examines how Member States have responded to EU imperatives in their budgetary commitments in their implementation strategies and in the policy outputs that result The study identifies similarities across European nations in the territorial and agricultural focus of agri environmental policy and draws attention to the alternative Bioacoustics , 1994 *The Dalesman* , 1989
