Collaboration David M. Levermore, Cheng Hsu, 2006-11-24 Global supply chain is a fact of life in today's world From the perspective of the First World this practice reigns in outsourcing of jobs that in the view of many threatens a way of life This argument actually implies that outsourcing represents a fair chance for the Third World to catch up and reverse leverage through market economy However many in the Third World are also opposed to the global market economy from an opposite argument The fact that matters is of course that globalization continues to progress relentlessly in its own momentum and that the national playing grounds continue to level globally for both Worlds Would globalization results in the rich nations getting richer and the poor poorer or would it help the world united in the same economical reason The questions that we the researchers could try to answer are a different kind the kind that leads to the understanding of the elements of the fittest in the global competition For instance what defines an enterprise's staying power on the top of the food chain or an economy's ability to design and control the global supply chains in the long term Evidently to understand this ability the field needs to study the engineering prowess required as much as the finance and management if the history of industrial revolution is any guide Yet the study on the engineering of global supply chains has been largely lacking **Enterprise Information**
