Thorpe, 2021-09-16 Scale Development Theory and Applications by Robert F DeVellis and new co author Carolyn T Thorpe demystifies measurement by emphasizing a logical rather than strictly mathematical understanding of concepts The Fifth Edition includes a new chapter that lays out the key concepts that distinguish indices from scales contrasts various types of indices suggests approaches for developing them reviews validity and reliability issues and discusses in broad terms some analytic approaches All chapters have been updated and the book strikes a balance between including relevant topics and highlighting recent developments in measurement while retaining an accessible user friendly approach to the material covered Construction ,1951 **Institutional and Technical Options**

**Methods for Examining Wind Effects on Buildings** Gregory A. Kopp, 2018-06-12 Global economic losses due to severe weather events have grown dramatically over the past two decades. A large proportion of these losses are due to severe wind storms such as tropical cyclones and tornadoes which can cause destruction to buildings, houses and other infrastructure over large areas. To address the growing losses, many new large scale and full scale laboratories have been developed. These tools are used to examine the issues that could not be solved with the traditional tools of wind engineering including model scale boundary layer wind tunnels, simplified standardized product tests and other methods of analysis. This book presents state of the art results from the development of the many novel approaches being used to mitigate natural disasters around the world.
