Stars Physical** Stephen Case, 2018-11-03 Making Stars Physical offers the first extensive look at the astronomical career of
John Herschel son of William Herschel and one of the leading scientific figures in Britain throughout much of the nineteenth
century Herschel's astronomical career is usually relegated to a continuation of his father William's sweeps for nebulae
However as Stephen Case argues John Herschel was pivotal in establishing the sidereal revolution his father had begun a
shift of attention from the planetary system to the study of nebulous regions in the heavens and speculations on the nature of
the Milky Way and the sun's position within it Through John Herschel's astronomical career in particular his work on
constellation reform double stars and variable stars the study of stellar objects became part of mainstream astronomy He
leveraged his mathematical expertise and his position within the scientific community to make sidereal astronomy accessible
even to casual observers allowing amateurs to make useful observations that could contribute to theories on the nature of
stars With this book Case shows how Herschel's work made the stars physical and laid the foundations for modern
astrophysics
