Weidema, Thomas Ekvall, 2004 **Progress in Life Cycle Assessment** 2021 Franziska Hesser, Iris Kral, Gudrun Obersteiner, Stefan Hörtenhuber, Martin Kühmaier, Vanessa Zeller, Liselotte Schebek, 2023-07-15 This book covers the latest developments in life cycle assessment LCA both in terms of methodology and its application in various research areas It includes methodological questions as well as case studies of strategies in the context of circular economy and new emerging technologies design of conceptual frameworks especially related to social LCA and the use of novel modeling approaches with a focus on energy supply and land use With research articles from leading German and Austrian research institutes the book is a valuable source for professionals working in the field of sustainability assessment researchers interested in the current state of LCA research and advanced university students in various scientific and technical fields 6 chapters are available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com) **Life Cycle Assessment (LCA) of Environmental and Energy Systems** Fabrizio Passarini, Luca Ciacchi, 2021-04-01 The transition towards renewable energy sources and green technologies for energy generation and storage is expected to mitigate the climate emergency in the coming years However in many cases this progress has been hampered by our dependency on critical materials or other resources that are often processed at high environmental burdens Yet many studies have shown that environmental and energy issues are strictly interconnected and require a comprehensive understanding of resource management strategies and their implications Life cycle assessment LCA is among the most inclusive analytical techniques to analyze sustainability benefits and trade offs within complex systems and in this Special Issue it is applied to assess the mutual influences of environmental and energy dimensions The selection of original articles reviews and case studies addressed covers some of the main driving applications for energy requirements and greenhouse gas emissions including power generation bioenergy biorefinery building and transportation An insightful perspective on the current topics and technologies and emerging research needs is provided Alone or in combination with integrative methodologies LCA can be of pivotal importance and constitute the scientific foundation on which a full system understanding can be reached **Life Cycle Assessment of Forest Products** Gustav Sandin, Greg M. Peters, Magdalena Svanström, 2016-09-07 This brief contains information on the reduction of environmental impact and explains how it is a key driver for the R D of new forest products The authors experts in the field describe how Life Cycle Assessment LCA is used to assess the environmental impact of such products e.g. in order to guide R D or attract investments The authors describe the main challenges of carrying out LCAs on forest products make recommendations for managing these challenges and discuss future research needs LCA case studies are used to illustrate the challenges covering a variety of forest products building components biofuels industrial chemicals textile fibres and clothing Described challenges include the planning of LCA studies e.g. how can one use LCA in R D the modelling of product systems how can one handle multi functionality and uncertainties

related to waste handling and geographical location of future production and environmental impact how can one assess water and land use impact and the climate impact of biomass

overview of existing LCIA methods and their similarities and differences *Pavement Life-Cycle Assessment* Imad L. Al-Qadi, Hasan Ozer, John Harvey, 2017-04-11 An increasing number of agencies academic institutes and governmental and industrial bodies are embracing the principles of sustainability in managing their activities and conducting business Pavement Life Cycle Assessment contains contributions to the Pavement Life Cycle Assessment Symposium 2017 Champaign IL USA 12-13 April 2017 and discusses the current status of as well as future developments for LCA implementation in project and network level applications The papers cover a wide variety of topics Recent developments for the regional inventory databases for materials construction and maintenance and rehabilitation life cycle stages and critical challenges Review of methodological choices and impact on LCA results Use of LCA in decision making for project selection Implementation of case studies and lessons learned agency perspectives Integration of LCA into pavement management systems PMS Project level LCA implementation case studies Network level LCA applications and critical challenges Use phase rolling resistance models and field validation Uncertainty assessment in all life cycle stages Role of PCR and EPDs in the implementation of LCA Pavement Life Cycle Assessment will be of interest to academics professionals and policymakers involved or interested in Highway and Airport Pavements Life Cycle Assessment - Recent Advances and New Perspectives Tamás Bányai, Péter Veres, 2023-10-25 The cradle to grave and cradle to cradle techniques of life cycle assessment make it possible to analyze the environmental impacts of products associated with natural resource acquisition purchasing production services assembly distribution and use and recycling from raw material extraction to waste management This book offers a selection of chapters that explain the impact of green supply chain solutions on value making chains It is designed to help students at all levels as well as managers and researchers to understand and appreciate the concept design and implementation of life cycle assessment *Life-cycle Assessment in Building and Construction* Shpresa Kotaji, Agnes Schuurmans, Suzy Edwards, 2003 Life Cycle Assessment (LCA) of Light-Weight Eco-composites Miao Guo, 2013-01-11 Miao Guo's PhD thesis provides scientific insights into the environmental issues related to biocomposites based on starch polyvinyl alcohol PVOH blends The author contributes significantly to the methodological issues underlying the Life Cycle Assessment LCA modelling approach As well as presenting complete LCA inventories using primary data from a variety of sources Guo develops a new modelling approach incorporating the process oriented biogeochemistry model Denitrification Decomposition DNDC into site specific LCA studies to simulate carbon and nitrogen dynamics in the wheat agro ecosystem This thesis addresses important LCA data quality issues by using comprehensive sensitivity and uncertainty analyses and has resulted in a large number of publications in internationally renowned journals **Life Cycle & Technoeconomic Modeling** Antonio Colmenar Santos, David Borge Diez, Enrique Rosales Asensio, 2020-12-02 This book aims to perform an impartial analysis to evaluate the implications of the environmental costs and impacts of a wide range of technologies and energy strategies This information is intended to be used to support decision making by groups including researchers

industry regulators and policy makers Life cycle assessment LCA and technoeconomic analysis can be applied to a wide variety of technologies and energy strategies both established and emerging LCA is a method used to evaluate the possible environmental impacts of a product material process or activity It assesses the environmental impact throughout the life cycle of a system from the acquisition of materials to the manufacture use and final disposal of a product Technoeconomic analysis refers to cost evaluations including production cost and life cycle cost Often in order to carry out technoeconomic analysis researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a commercial scale and estimate the costs of such expansions The results of the developed models help identify possible market applications and provide an estimate of long term impacts These methods together with other forms of decision analysis are very useful in the development and improvement of energy objectives since they will serve to compare different decisions evaluating their political and economic feasibility and providing guidance on potential financial and technological risks *Environmental Life Cycle Assessment of Goods and Services* Chris T.

Hendrickson, Lester B. Lave, H. Scott Matthews, 2010-09-30 Environmental life cycle assessment is often thought of as cradle to grave and therefore as the most complete accounting of the environmental costs and benefits of a product or service However as anyone who has done an environmental life cycle assessment knows existing tools have many problems data is difficult to assemble and life cycle studies take months of effort A truly comprehensive analysis is prohibitive so analysts are often forced to simply ignore many facets of life cycle impacts But the focus on one aspect of a product or service can result in misleading indications if that aspect is benign while other aspects pollute or are otherwise unsustainable This book summarizes the EIO LCA method explains its use in relation to other life cycle assessment models and provides sample applications and extensions of the model into novel areas A final chapter explains the free easy to use software tool available on a companion website www.eiolca.net The software tool provides a wealth of data summarizing the current U S economy in 500 sectors with information on energy and materials use pollution and greenhouse gas discharges and other attributes like associated occupational deaths and injuries The joint project of twelve faculty members and over 20 students working together over the past ten years at the Green Design Institute of Carnegie Mellon University the EIO LCA has been applied to a wide range of products and services It will prove useful for research industry and in economics engineering or interdisciplinary classes in green design **Handbook of Life Cycle Assessment (LCA) of Textiles and Clothing**

Subramanian Senthilkannan Muthu, 2015-07-25 Life cycle assessment LCA is used to evaluate the environmental impacts of textile products from raw material extraction through fibre processing textile manufacture distribution and use to disposal or recycling LCA is an important tool for the research and development process product and process design and labelling of textiles and clothing *Handbook of Life Cycle Assessment LCA of Textiles and Clothing* systematically covers the LCA process with comprehensive examples and case studies Part one of the book covers key indicators and processes in LCA from carbon

and ecological footprints to disposal re use and recycling Part two then discusses a broad range of LCA applications in the textiles and clothing industry Covers the LCA process and its key indicators including carbon and ecological footprints disposal re use and recycling Examines the key developments of LCA in the textile and clothing industries Provides a wide range of case studies and examples of LCA applications in the textile and clothing industries Environmental Life Cycle Assessment Olivier Jolliet, Myriam Saade-Sbeih, Shanna Shaked, Alexandre Jolliet, Pierre Crettaz, 2015-11-18 Environmental Life Cycle Assessment is a pivotal guide to identifying environmental problems and reducing related impacts for companies and organizations in need of life cycle assessment LCA LCA a unique sustainability tool provides a framework that addresses a growing demand for practical technological solutions Detailing each phase of the LCA methodology this textbook covers the historical development of LCA presents the general principles and characteristics of LCA and outlines the corresponding standards for good practice determined by the International Organization for Standardization It also explains how to identify the critical aspects of an LCA provides detailed examples of LCA analysis and applications and includes illustrated problems and solutions with concrete examples from water management electronics packaging automotive and other industries In addition readers will learn how to Use consistent criteria to realize and evaluate an LCA independently of individual interests Understand the LCA methodology and become familiar with existing databases and methods based on the latest results of international research Analyze and critique a completed LCA Apply LCA methodology to simple case studies Geared toward graduate and undergraduate students studying environmental science and industrial ecology as well as practicing environmental engineers and sustainability professionals who want to teach themselves LCA good practices Environmental Life Cycle Assessment demonstrates how to conduct environmental assessments for products throughout their life cycles It presents existing methods and recent developments in the growing field of LCA and systematically covers goal and system definition life cycle inventory life cycle impact assessment and interpretation Probability, Statistics and Life Cycle Assessment Reinout Heijungs, 2024-05-20 This textbook discusses the use of uncertainty analysis and sensitivity analysis in environmental life cycle assessment LCA This is a topic which has received a lot of attention by journals including the leading Springer International Journal of Life Cycle Assessment Despite its importance no coherent textbook exists that summarizes the progress that has been made in the last 20 years This book attempts to fill that gap Its audience is practitioners professional and academic of LCA teachers and Ph D students It gives a very broad overview of the field probability theory descriptive statistics inferential statistics error analysis sensitivity analysis decision theory etc all in relation to LCA Much effort has been taken to give a balanced overview with a uniform terminology and mathematical notation Life-cycle Analysis of Energy Systems Bent Sørensen, 2011 Life cycle assessment of new energy solutions plays an important role in discussions about global warming mitigation options and the evaluation of concrete energy production and conversion installations This book starts by describing the methodology of life cycle analysis and life cycle assessment of new energy

solutions It then goes on to cover in detail a range of applications to individual energy installations national supply systems and to the global energy system in a climate impact context Coverage is not limited to issues related to commercial uses by consultants according to ISO norms It also emphasizes life cycle studies as an open ended scientific discipline embracing economic issues of cost employment equity foreign trade balances ecological sustainability and a range of geo political and social issues A wealth of applications are described and a discussion on the results obtained in each study is included Example areas are fossil and nuclear power plants renewable energy systems and systems based on hydrogen or batteries as energy carriers The analysis is continued to the end users of energy where energy use in transportation industry and home are scrutinized for their life cycle impacts Biofuel production and the combustion of firewood in home fireplaces and stoves are amongst the issues discussed A central theme of the book is global warming The impacts of greenhouse gas emissions are meticulously mapped at a depth far beyond that of the IPCC reports A novel and surprising finding is that more lives will be saved than lost as a direct consequence of a warmer climate After a 2oC increase in temperature the reduction in death rates in areas with cold winters would outweigh the increase in the death rates in hot climates However this is only one of several impacts from greenhouse gases and the remaining ones are still overwhelmingly negative The fact that some population groups may benefit from higher temperatures notably the ones most responsible for greenhouse gas emissions whilst others who did not contribute much to the problem suffer is one of the main points of the book The book is suitable as a university textbook and as a reference source for engineers managers and public bodies responsible for planning and licensing

Pavement, Roadway, and Bridge Life Cycle Assessment 2024 Gerardo W. Flintsch,Eugene A. Amarh,John Harvey,Imad L. Al-Qadi,Hasan Ozer,Davide Lo Presti,2024-05-24 This book highlights the latest advances innovations and applications in the field of LCA in pavements bridges and roadways as presented by leading international researchers at the 6th International Symposium on Pavement Roadway and Bridge Life Cycle Assessment ISPRB LCA2024 held in Arlington VA USA on June 6 8 2024 It covers a diverse range of topics concerning assessment of environmental impacts of pavements bridges and roadways including environmental product declarations EPDs and use of life cycle assessment LCA in design data and case studies LCA methodologies for transportation infrastructure durability and service life assessments maintenance strategies to enhance performance and minimize environmental impacts evaluating the environmental impacts of materials and construction recycling and reuse of materials carbonation of concrete pavement vehicle interaction life cycle thinking in climate change planning and climate change mitigation The contributions which were selected by means of a rigorous international peer review process present a wealth of exciting ideas that will open novel research directions and foster new multidisciplinary collaborations

University Campus Solid Waste Management Pezhman Taherei Ghazvinei,Masoud Aghajani Mir,Hossein Hassanpour Darvishi,Junaidah Ariffin,2017-07-31 This volume provides a comprehensive method for optimizing solid waste management practices and procedures at college and university campuses

through the use of cluster analysis to combine Life Cycle Assessment and Analytical Hierarchy Process Author Pezhman Taherei uses Malaysia's University of Malaya as a case study and model and through this method was able to assess which combination of waste disposal management and recycling techniques generate the least environmental impact while retaining the maximum cost savings for the university A method for analysis of solid waste composition is also proposed Higher education institutes generate thousands of tons of solid waste per year Comprehensive solid waste management programs which take integrated solid waste management systems into consideration are one of the greatest challenges to achieving campus sustainability This system can serve as a guide and blueprint for other universities that are taking steps toward sustainability through improved solid waste management

Life-Cycle Assessment of Biorefineries Edgard Gnansounou, Ashok Pandey, 2016-12-20 Life Cycle Assessment of Biorefineries the sixth and last book in the series on biomass biorefineries discusses the unprecedented growth and development in the emerging concept of a global bio based economy in which biomass based biorefineries have attained center stage for the production of fuels and chemicals It is envisaged that by 2020 a majority of chemicals currently being produced through a chemical route will be produced via a bio based route Agro industrial residues municipal solid wastes and forestry wastes have been considered as the most significant feedstocks for such bio refineries However for the techno economic success of such biorefineries it is of prime and utmost importance to understand their lifecycle assessment for various aspects Provides state of art information on the basics and fundamental principles of LCA for biorefineries Contains key features for the education and understanding of integrated biorefineries Presents models that are used to cope with land use changes and their effects on biorefineries Includes relevant case studies that illustrate main points
