Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC) Alin Postecu, Shigeyasu Sakamoto, 2017-03-27 Providing a reasonable level of profitability through productivity is and will remain one of the fundamental tasks of the management teams of any production company. Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC) The Path to Competitiveness contains two new methodologies to improving the productivity and profitability of production systems that continuously increase competitiveness. Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC) Both MCPD and MDC are the result of long time synthesis and distillation being implemented successfully, totally or partially in many companies. The MCPD system developed by Alin Postecu is a manufacturing cost policy aimed at continuous cost improvement through a systemic and systematic approach. The MCPD is a methodology that improves the production flow driven by the need for Manufacturing Cost Improvement (MCI) for both existing and future products through setting targets and means to continuously improve production process productivity for each product family cost. The MDC developed by Shigeyasu Sakamoto designs the effective manufacturing methods using a tool of engineering steps: identifying ideas for increasing productivity called KAIZENSHIRO, improvable value as a target. The MDC results on production methods lead to effectiveness of work measurement for performance (P) and to knowledge and improvement of production control and planning as utilization (U) in order to achieve labor target costs. The combination of MCPD and MDC methodologies can provide a unique approach for the managers who are seeking new ways for increasing productivity and profitability to increase the competitive level of their manufacturing company.

edition of the classic textbook has been written to provide a completely up to date text for students of mechanical industrial manufacturing and production engineering and is an indispensable reference for professional industrial engineers and managers In his outstanding book Professor Katsundo Hitomi integrates three key themes into the text manufacturing technology production management industrial economics Manufacturing technology is concerned with the flow of materials

from the acquisition of raw materials through conversion in the workshop to the shipping of finished goods to the customer. Production management deals with the flow of information by which the flow of materials is managed efficiently through planning and control techniques. Industrial economics focuses on the flow of production costs aiming to minimise these to facilitate competitive pricing. Professor Hitomi argues that the fundamental purpose of manufacturing is to create tangible goods and it has a tradition dating back to the prehistoric toolmakers. The fundamental importance of manufacturing is that it facilitates basic existence, it creates wealth and it contributes to human happiness. Nowadays we regard manufacturing as operating in these other contexts beyond the technological. It is in this unique synthesis that Professor Hitomi's study constitutes a new discipline: manufacturing systems engineering, a system that will promote manufacturing excellence.

**Key Features** The classic textbook in manufacturing engineering. Fully revised edition providing a modern introduction to manufacturing technology, production management and industrial economics. Includes review questions and problems for the student reader.

Manufacturing Cost Policy Deployment (MCPD) Transformation Alin Posteuca, 2018-01-31. Achieving a long term acceptable level of manufacturing profitability through productivity requires the total commitment of management teams and all staff in any manufacturing company and beyond. Awareness and continuous improvement of manufacturing costs, behind losses and waste, is the core goal of the Manufacturing Cost Policy Deployment (MCPD). Achieving this goal will continually uncover the hidden reserves of profitability through a harmonious transformation of the manufacturing flow coordinated by the continuous need to improve manufacturing costs. Setting annual targets and means for manufacturing costs improvement more exactly for costs of losses and waste and the exact fulfillment of these requires mobilization of all people in the company to carry out systematic improvement activities: kaizen and systemic improvement actions, kaikaku of the processes of each product family.

**cost** The MCPD system was born out of careful observation of the challenges, principles and phenomena of manufacturing companies and the profound discussions with the people in these companies at all levels.

Manufacturing Cost Policy Deployment (MCPD) Transformation: Uncovering Hidden Reserves of Profitability is organized in three sections. The first section presents the concept and the need for an MCPD system from a managerial perspective. In the second section, the transformation of manufacturing companies through the MCPD system is presented more precisely, the details of the initial steps of the implementation of the MCPD, the three phases and the seven steps of the MCPD and the elements necessary for a constant and consistent application of the MCPD. In the last section, there are two examples of the MCPD implementation in two different types of industries: namely manufacturing and assembly industry and process industry, and two case studies for the improvement of manufacturing costs for each cost of equipment, setup loss using kaizen, shiro replacement of bottleneck equipment and associated costs of losses using kaikaku, cost of quality losses with improving operators' skills to sustain quality using kaizen and cost problem solving with the consumption of lubricants for one of the equipment using A3.
