Brock, 2017-10-02 The term space is inherently geographical Educational provision and activity takes place within spaces ranging from a room at home or in a school to a campus to an administrative area which could be a state within a country a whole country or a group of countries Such spaces are known as geographical surfaces Within these spaces the process of learning and teaching takes place at particular points that are often nodes in a network which may be formal such as a group of schools or universities or non formal such as in cyberspace Understanding what goes on depends on the scale at which it is observed ranging from individuals to global outreach Altogether this constitutes the geography of educational reality This comprehensive volume includes a theoretical background plus a sample of situations including school level policy and administration inequitable access education hubs and small states It offers an introduction to a relatively neglected member of the family of education foundation disciplines the geography of education This book was originally published as a special issue of *Comparative Education* **Spatial Theories of Education** Kalervo N. Gulson, Colin Symes, 2007-11-21 This

collection of original work within the sociology of education draws on the spatial turn in contemporary social theory The premise of this book is that drawing on theories of space allows for a more sophisticated understanding of the competing rationalities underlying educational policy change social inequality and cultural practices The contributors work a spatial dimension into the consideration of educational phenomena and illustrate its explanatory potential in a range of domains urban renewal globalisation race markets and school choice suburbanisation regional and rural settings and youth and

Wolf, Stephen Macedo, 2004-09-30 The United States is in the midst of historic experiments with publicly funded choice in K 12 education

experiments that recently received a green light from the Supreme Court Other nations have long experience with the funding and regulation of nonpublic schools including religious schools This book asks what U S policymakers public officials and citizens can learn from these experiences In particular how do other countries regulate or structure publicly funded educational choice with an eye toward civic values looking not only for improvements in test scores but also in tolerance civic cohesion and democratic values such as integration across the lines of class religion and race The experience of Europe and Canada with school choice is both extensive and varied In England and Wales public school choice is widespread as parents play a significant role in selecting the school their children will attend In the Netherlands and much of Belgium a majority of students attend religious schools at government expense In Canada France and Germany state financed school choice is limited to circumstances that serve particular social and governmental needs In Italy school choice has just recently arrived on the policy agenda In spite of the diversity of national experiences in all of these countries choice is regulated by the government in significant and varied ways to promote civic values In several of these countries school choice policy itself appears to have played an important role in promoting social cohesion and integration This book presents a wealth of experience designed to aid policymakers and citizens as they consider historic changes in American public education policy
