Covid-19 Unmasked: The News, The Science, And Common Sense Winfried Just, 2021-03-11 How can we keep up with the deluge of information about COVID-19 and tell which parts are most important and trustworthy We read Scientists recommend Experts warn A new model predicts How do scientific experts come up with their recommendations What do their predictions really mean for us for our friends and our families How can we make rational decisions And how can we have sensible conversations about the pandemic when we disagree These are the questions that this book is trying to address It is written in the form of dialogues

Alice a student of epidemiology explains the science to three of her fellow students who have a lot of questions for her The students have the same concerns that we all share to varying degrees What the pandemic is doing to our health our economy and our cherished freedoms In their conversations they discover how the science relates to these questions The book focuses on epidemiology the science of how infections spread and how the spread can be mitigated The science of how many infections can be prevented by certain kinds of actions This is what we need to understand if we want to act wisely as individuals and as a society The author s goal is to help the reader think about the COVID 19 pandemic like an epidemiologist About the various preventive measures what they are trying to accomplish what the obstacles are About what is likely to be most effective in the long run at moderate economic and personal cost About the likely consequences of personal decisions About how to best protect oneself and others while allowing all of us to lead lives that are as close as possible to normal While some chapters present slightly more advanced material than others no scientific background is needed to follow the conversations The technical concepts are explained in small steps and the occasional calculations in the book require only high school mathematics Related Link s

Kuipers,Anne Ruth Mackor,2023-03-13 This collection of 17 articles offers an overview of the philosophical activities of a group of philosophers who have been working at the Groningen University The meta methodological assumption which unifies the research of this group holds that there is a way to do philosophy which is a middle course between abstract normative philosophy of science and descriptive social studies of science On the one hand it is argued with social studies of science that philosophy should

take notice of what scientists actually do On the other hand however it is claimed that philosophy can and should aim to reveal cognitive patterns in the processes and products of scientific and common sense knowledge Since it is thought that those patterns can function as guidelines in new research and or in research in other disciplines philosophy can nevertheless hold on to the normative aim which is characteristic of classical philosophy of science Compared to this common assumption there is a diversity of subjects Some papers deal with general problems of science knowledge cognition and argumentation others with topics relating to foundational problems of particular sciences Therefore this volume is of interest to philosophers of science to philosophers of knowledge and argumentation in general to philosophers of mind as well as for scientists working in the physical and applied sciences biology psychology and economy who are interested in the foundations of their disciplines After a foreword by Leszek Nowak and a general introduction by the editors the book is divided into four parts with special introductions I Conceptual Analysis in Service of Various Research Programmes Henk Zandvoort Rein Vos Rick Looijen Gerben Stavenga Ren e Dalitz II The Logic of the Evaluation of Arguments Hypotheses Default Rules and Interesting Theorems Erik Krabbe Theo Kuipers Alfons Keupink Maarten Janssen Yao Hua Tan Bert Hamminga III Three Challenges to the Truth Approximation Programme Sjoerd Zwart Hinne Hetteema Theo Kuipers Roberto Festa IV Explicating Psychological Intuitions Anne Ruth Mackor Jeanne Peijnenburg Lex Guichard Michel ter Hark The Groningen research group was recently qualified by an official international assessment committee as one of the best philosophy research groups in the Netherlands

Scientific Challenges to Common Sense Philosophy Rik Peels, Jeroen de Ridder, René van Woudenberg, 2020-05-27 Common sense philosophy holds that widely and deeply held beliefs are justified in the absence of defeaters While this tradition has always had its philosophical detractors who have defended various forms of skepticism or have sought to develop rival epistemological views recent advances in several scientific disciplines claim to have debunked

the reliability of the faculties that produce our common sense beliefs At the same time however it seems reasonable that we cannot do without common sense beliefs entirely Arguably science and the scientific method are built on and continue to depend on common sense This collection of essays debates the tenability of common sense in the face of recent challenges from the empirical sciences It explores to what extent scientific considerations rather than philosophical considerations put pressure on common sense philosophy The book is structured in a way that promotes dialogue between philosophers and scientists Noah Lemos one of the most influential contemporary advocates of the common sense tradition begins with an overview of the nature and scope of common sense beliefs and examines philosophical objections to common sense and its relationship to scientific beliefs Then the volume features essays by scientists and philosophers of science who discuss various proposed conflicts between commonsensical and scientific beliefs the reality of space and time about the nature of human beings about free will and identity about rationality about morality and about religious belief Notable philosophers who embrace the common sense tradition respond to these essays to explore the connection between common sense philosophy and contemporary debates in evolutionary biology neuroscience physics and psychology Look Andrew L. Yarrow,2021 Andrew L Yarrow tells the story of Look magazine one of the greatest mass circulation publications in American history and the very different United States in which it existed The all but forgotten magazine had an extraordinary influence on mid twentieth century America not only by telling powerful thoughtful stories and printing outstanding photographs but also by helping to create a national conversation around a common set of ideas and ideals Yarrow describes how the magazine covered the United States and the world telling stories of people and trends injustices and triumphs and included essays by prominent Americans such as Martin Luther King Jr and Margaret Mead It did not shy away from exposing the country s problems but it always believed that those problems could be solved Look which was published from 1937 to 1971 and had about 35 million readers at its peak was an astute observer with a distinctive take on one of the greatest eras in U S history from winning World War II and building immense increasingly inclusive prosperity to celebrating grand achievements and advancing the rights of Black and female citizens Because the magazine shaped Americans beliefs while guiding the country through a period of profound social and cultural change this is also a story about how a long gone form of journalism helped make America better and assured readers it could be better still Provided by publisher **Making Sense of Science** Cornelia Dean,2017-03-13 Cornelia Dean draws on her 30 years as a science journalist with the New York Times to expose the flawed reasoning and knowledge gaps that handicap readers when they try to make sense of science She calls attention to conflicts of interest in research and the price society pays when science journalism declines and funding dries up **The Marriage of Sense and Soul** Ken Wilber,2011-08-03 There is arguably no more critical and pressing topic than the relation of science and religion in the modern world Science has given us the methods for discovering truth while religion remains the single greatest force for generating meaning Yet the two are seen as mutually exclusive with wrenching

consequences for humanity In *The Marriage of Sense and Soul* one of today's most important philosophers brilliantly articulates how we might begin to think about science and religion in ways that allow for their reconciliation and union on terms that will be acceptable to both camps Ken Wilber is widely acclaimed as the foremost thinker in integrating Western psychology and the Eastern spiritual traditions His many books have reached across disciplines and synthesized the teachings of religion psychology physics mysticism sociology and anthropology earning him a devoted international following *The Marriage of Sense and Soul* is his most accessible work yet aimed at guiding a general audience to the mutual accord between the spiritual subjective world of ancient wisdom and the objective empirical world of modern knowledge Wilber clearly and succinctly explores the schism between science and religion and the impact of this philosophical Cold War on the fate of humanity He systematically reviews previous attempts at integration explaining why romantic idealistic and postmodern theories failed And he demonstrates how science is compatible with certain deep features common to all of the world's major religious traditions In pointing the way to a union between truth and meaning Ken Wilber has created an elegant and accessible book that is breathtaking in its scope

Philosophy, Science, and Sense Perception Maurice Mandelbaum, 2019-12-01 Originally published in 1964 In four essays Professor Mandelbaum challenges some of the most common assumptions of contemporary epistemology Through historical analyses and critical argument he attempts to show that one cannot successfully sever the connections between philosophic and scientific accounts of sense perception While each essay is independent of the others and the argument of each must therefore be judged on its own merits one theme is common to all that critical realism as Mandelbaum calls it is a viable epistemological position even though some schools of thought hold it in low esteem

About the God That the Incumbent Doctor in His Fifties Looked at Again John Kim, 2020-02-14 The author wrote the book to re-examine his encounter with God from a modern philosophical and humanities standpoint and his God as seen by a doctor in his 50s contains the author's worries and exploratory journeys that have accumulated over the past 30 years
