Nature-Based Flood Risk Management on Private Land Thomas Hartmann, Lenka Slavíková, Simon

McCarthy,2019-08-22 This open access book addresses the various disciplinary aspects of nature based solutions in flood risk management on private land In recent decades water management has been moving towards nature based solutions These are assumed to be much more multi purpose than traditional grey infrastructures and seem to be regarded as a panacea for

many environmental issues At the same time such measures require more and mostly privately owned land and more diverse stakeholder involvement than traditional grey engineering approaches They also present challenges related to different disciplines Nature based solutions for flood risk management not only require technical expertise but also call for interdisciplinary insights from land use planning economics property rights sociology landscape planning ecology hydrology agriculture and other disciplines to address the challenges of implementing them Ultimately nature based flood risk management is a multi disciplinary endeavor Featuring numerous case studies of nature based flood risk management accompanied by commentaries this book presents brief academic reflections from two different disciplinary perspectives that critically highlight which specific aspects are of significance and as such underscore the multi disciplinary nature of the challenges faced

Design for Regenerative Cities and Landscapes Rob Roggema, 2022-05-06 This book discusses the way to design and plan for regenerative cities and landscapes Where sustainability aims to safeguard the resources for future generations and the resilience concept focuses on dealing with shocks to keep the system functioning regeneration aims to give back more than it takes from the system This principle is often used in analytical and assessment literature but not yet elaborated in a spatial planning and design context which this book does It offers insights from a range of perspectives spatial scales such as the country level neighbourhood public space streets and the building levels scientific fields and continents amongst which Africa Oceania and Europe

Models for Planning Wildlife Conservation in Large Landscapes Joshua Millspaugh, Frank R. Thompson, 2011-04-28 A single resource volume of information on the most current and effective techniques of wildlife modeling Models for Planning Wildlife Conservation in Large Landscapes is appropriate for students and researchers alike The unique blend of conceptual methodological and application chapters discusses research applications and concepts of modeling and presents new ideas and strategies for wildlife habitat models used in conservation planning The book makes important contributions to wildlife conservation of animals in several ways 1 it highlights historical and contemporary advancements in the development of wildlife habitat models and their implementation in conservation planning 2 it provides practical advice for the ecologist

conducting such studies and 3 it supplies directions for future research including new strategies for successful studies
Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation
planning the book could be used in studying wildlife habitat models conservation planning and management techniques
Additionally it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations Additionally
the length of the book would be ideal for graduate student seminar course Using wildlife habitat models in conservation
planning is of considerable interest to wildlife biologists With ever tightening budgets for wildlife research and planning
activities there is a growing need to use computer methods Use of simulation models represents the single best alternative
However it is imperative that these techniques be described in a single source Moreover biologists should be made aware of
alternative modeling techniques It is also important that practical guidance be provided to biologists along with a
demonstration of utility of these procedures Currently there is little guidance in the wildlife or natural resource planning
literature on how best to incorporate wildlife planning activities particularly community based approaches Now is the perfect
time for a syntheistic publication that clearly outlines the concepts and available methods and illustrates them Only single
resource book of information not only on various wildlife modeling techniques but also with practical guidance on the
demonstrated utility of each based on real world conditions Provides concepts methods and applications for wildlife
ecologists and others within a GIS context Written by a team of subject area experts **Landscape Is...!** Gareth
Doherty, Charles Waldheim, 2025-02-24 Landscape Is examines the implicit biases and received meanings of landscape
Following on from the previous publication Is Landscape which examined the plural and promiscuous identities of the
landscape idea this companion volume reflects upon the diverse and multiple meanings of landscape as a discipline
profession and medium This book is intended for academics researchers and students in landscape architecture and cognate
disciplines Chapters address various overlooked aspects of landscape that develop disturb and diversify received
understandings of the field Framed as an inquiry into the relationship of landscape to the forms of human subjectivity the
book features contributions from leading voices who challenge the contemporary understandings of the field in relation to
capital and class race and gender power and politics and more **Advances in Climate Change and Global Warming
