(ENGLAND), Robert Burgess, 1969 Caving Technical Guide French School Of Caving, 2013-05-25 This manual describes the various techniques and equipment relating to caving It is not simply a catalogue of instruction by more of a guide to progression and how to overcome situations which will be encountered The techniques demonstrated are those taught by the French School of Caving A Guide to Speleological Literature of the English Language Diana E. Northup, 1998 This is a family story of America s most famous cave explorer who was trapped and died in Sand Cave in 1925 That story has been told many times but never before has the complete life of Floyd Collins been presented Floyd s younger brother Homer tells how Floyd was fascinated with caves from his childhood of his discovery of the famous Crystal Cave on the home property and of the rescue attempts from the viewpoint of a brother so devoted that his extraordinary efforts to save Floyd were rewarded by his being removed from the premises while others inexperienced in working in caves carried on the unsuccessful attempt It is a warm story of a man whose love in life was exploring caves a man who endured his grim death with dignity and pride in his vocation Page 4 of cover Underground Mining Methods W. the SME Mining Engineering Handbook reaffirms its international reputation as the handbook of choice for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term; why such changes are inevitable; what this will mean in terms of challenges and how they could be managed; Explaining the mechanics associated with the multifaceted world of mine and mineral economics from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash flow issues associated with mine planning at a mature operation; Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving optimization or process dewatering methods; Examining in detail the methods and equipment available to achieve efficient, predictable and safe rock breaking, whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner or cast blasting at a surface coal operation; Identifying the salient points that dictate which is the safest, most efficient and most versatile extraction method to employ as well as describing in detail how each alternative is engineered; Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders.

Channel Characterisation and System Design for Sub-Surface

Communications David Gibson, 2010-06-13 Based on the author's PhD thesis, this book is a theoretical study of subterranean radio communication with the focus on methods that depend primarily on the penetration of electromagnetic fields through the ground. Through the earth, communication using electromagnetic fields specifically magnetic induction plays a role in search and rescue systems used in the mining industry. It is also used for borehole telemetry, pipeline location and by cavers and pot-holers. Chapters describe propagation, antennas and the design of transmitters and receivers. A figure of merit, the specific aperture, is introduced as an aid to antenna design. A crucial aspect of all systems is the signal-to-noise ratio for which the strategy of noise matching is introduced. The design of a wide-band, low-frequency sounder is described for channel evaluation using a non-ideal binary sequence. A method of calculating the inverse of a generalised sequence is described for which cross-correlation results in a system identification signal.
