Manufacturing Management:

Encyclopedia of Production and Manufacturing Management Paul M. Swamidass, 2006-09-21 The Encyclopedia of Production and Manufacturing Management is an encyclopedia that has been developed to serve this field as the fundamental reference work. Over the past twenty years the field of production and operations management has grown more rapidly than ever and consequently its boundaries have been stretched in all directions. For example in the last two decades production and manufacturing management absorbed in rapid succession several new production management concepts: manufacturing strategy, focused factory, just in time manufacturing, concurrent engineering, total quality management, supply chain management, flexible manufacturing systems, lean production and mass customization to name a few. This explosive growth makes the need for this volume abundantly clear. The manufacturing industry thinks and acts more broadly than it did several decades ago. The most notable change has been the need for manufacturing managers to think in technological, strategic and competitive terms. This is a very favorable development and it leads to manufacturing success. The entries in this encyclopedia include the most recent technical and strategic innovations in production and manufacturing management. The encyclopedia consists of articles of varying lengths. The longer articles on important concepts and practices range from five to fifteen pages. There are about 100 such articles written by nearly 100 authors from around the world. In addition there are over 1000 shorter entries on concepts, practices and principles. The range of topics and depth of coverage is intended to suit both student and professional audiences. The shorter entries provide digests of unfamiliar and complicated subjects. Difficult subjects are made intelligible to the reader without oversimplification. The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness. The world of manufacturing today is increasingly competitive. It is apparent that manufacturers must respond to these competitive pressures with technical and strategic innovation. This encyclopedia has been developed to help researchers, students and those in the manufacturing industry to understand and implement these ongoing changes in the field.

INTELLIGENT MANUFACTURING MANAGEMENT SYSTEMS The book explores the latest manufacturing techniques in

relation to AI and evolutionary algorithms that can monitor and control the manufacturing environment The concepts that pertain to the application of digital evolutionary technologies in the sphere of industrial engineering and manufacturing are presented in this book A few chapters demonstrate stepwise discussion case studies structured literature review rigorous experimentation results and applications Further chapters address the challenges encountered by industries in integrating these digital technologies into their operational activities as well as the opportunities for this integration In addition the reader will find Systemic explanations of the unique characteristics of big data cloud computing and AI used for decision making in intelligent production systems Highlights of the current and highly relevant topics in manufacturing management Structured presentations resolving the issues being faced by many real world applications in a broad range of areas such as smart supply chains knowledge management intelligent inventory management IoT adoption in manufacturing management and more Intelligent techniques for sustainable practices in industrial waste management Audience The book will be used by researchers industry engineers and data scientists AI specialists working in industrial engineering mechanical engineering production engineering manufacturing engineering and operations and supply chain management The book will also be valuable to the service sector industry such as logistics and those implementing smart cities

Global Manufacturing Management Thomas Friedli, Gisela Lanza, Dominik Remling, 2021-09-28 Using site specific optimization approaches in international manufacturing networks is increasingly proving insufficient To solve this problem several holistic and integrated alternatives have been developed to reflect a global perspective This book presents advances in the St Gallen Global Manufacturing Network Model and its application in numerous industry benchmarking and research projects The contents combine data driven solutions with qualitative management frameworks for the strategic optimization of international manufacturing networks In the first part the book addresses the foundation of manufacturing network management and further describes the St Gallen Operational Excellence approaches to manage plant performance On this basis the authors show how plant and network level performance can be enhanced via key improvement domains e g strategy configuration coordination performance management digitalization In turn the second part demonstrates the application of the constructs in manufacturing companies from various industries By combining research and practice the book offers unique perspectives on the management of global production striving toward higher performance on manufacturing site and network level

Strategic Management of Global Manufacturing Networks Thomas Friedli, Andreas Mundt, Stefan Thomas, 2014-07-08 The preceding process of globalization and the continuously rising competitive pressure on manufacturing companies in more developed economies unveiled the limits of classical site focused optimization approaches The focus of network optimization shifts ever more towards an integrative view of manufacturing networks striving for a harmonization of the strategy configuration and coordination levels This book presents such an integrative approach to the strategic management of manufacturing networks Besides strategic network requirements this book discusses the derivation

of an optimal global footprint and the optimization of network coordination activities Special attention is paid to the site roles concept especially to the concept of lead factory A large number of up to date cases from the producing industry enrich the book and provide the reader with vivid examples for the application of the presented concepts Hence this book is a must read for both practitioners and academic researchers

Competitive Manufacturing for Innovative Products and Services Christos Emmanouilidis, Marco Taisch, Dimitris Kiritsis, 2013-08-13 The two volumes IFIP AICT 397 and 398 constitute the thoroughly refereed post conference proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems APMS 2012 held in Rhodes Greece in September 2012. The 182 revised full papers were carefully reviewed and selected for inclusion in the two volumes. They are organized in 6 parts: sustainability design, manufacturing and production management, human factors, learning and innovation, ICT and emerging technologies in production management, product and asset lifecycle management and services, supply chains and operations. *The Routledge Companion to Production and Operations Management* Martin K. Starr, Sushil K. Gupta, 2017-03-27 This remarkable volume highlights the importance of Production and Operations Management (POM) as a field of study and research contributing to substantial business and social growth. The editors emphasize how POM works with a range of systems: agriculture, disaster management, e-commerce, healthcare, hospitality, military systems, not-for-profit, retail, sports, sustainability, telecommunications, and transport, and how it contributes to the growth of each. Martin K. Starr and Sushil K. Gupta gather an international team of experts to provide researchers and students with a panoramic vision of the field. Divided into eight parts, the book presents the history of POM and establishes the foundation upon which POM has been built, while also revisiting and revitalizing topics that have long been essential. It examines the significance of processes and projects to the fundamental growth of the POM field. Critical emerging themes and new research are examined with open minds, and this is followed by opportunities to interface with other business functions. Finally, the next era is discussed in ways that combine practical skill with philosophy in its analysis of POM, including traditional and nontraditional applications, before concluding with the editors' thoughts on the future of the discipline. Students of POM will find this a comprehensive, definitive resource on the state of the discipline and its future directions.

Advances in Manufacturing, Production Management and Process Control Waldemar Karwowski, Stefan Trzcielinski, Beata Mrugalska, 2019-06-05 This book discusses the latest advances in manufacturing and process control with a special emphasis on digital manufacturing and intelligent technologies for manufacturing and industrial processes control. The human aspect of the developed technologies and products, their interaction with the users, as well as sustainability issues, are covered in detail. Development of new products using rapid prototyping, systems, remote fabrication, and other advanced techniques is described in detail, highlighting the state of the art and current challenges. Based on both the AHFE 2019 International Conference on Human Aspects of Advanced Manufacturing and the AHFE 2019 International Conference on Advanced Production Management and Process Control held on July 24-28, 2019, in Washington, D.C., USA, this book also highlights important strategies for managing enterprise of the future. *Advances in Manufacturing, Production Management and Process Control* Beata Mrugalska, Stefan Trzcielinski, Waldemar Karwowski, Massimo Di Nicolantonio, Emilio Rossi, 2020-06-30 This book discusses the latest advances in the broadly defined field of advanced manufacturing and process
