This is followed by a detailed description of various manufacturing processes commonly used in the industry. With several revisions and the addition of four new chapters, the new edition also includes a detailed discussion on mechanics of metal cutting, features and working of machine tools, design of molds and gating systems for proper filling and cooling of castings. Besides, the new edition provides the basics of solid state welding processes, weldability, heat in welding, residual stresses, and testing of weldments, and also of non-conventional machining methods, automation, and transfer machining, machining centres, robotics, manufacturing of gears, threads, and jigs and fixtures. The book is intended for undergraduate students of mechanical engineering, production engineering, and industrial engineering. Diploma students and those preparing for AMIE Indian Engineering Services and other competitive examinations will also find the book highly useful. New to This Edition: Includes four new chapters: Non-conventional Machining Methods, Automation, Transfer Machining, Machining Centres, and Robotics; Manufacturing Gears and Threads, and Jigs and Fixtures to meet the course requirements; Offers a good number of worked-out examples to help the students in mastering the concepts of the various manufacturing processes; Provides objective type questions drawn from various competitive examinations such as Indian Engineering Services and GATE.

Fundamental Principles of Manufacturing Processes Robert H. Todd, Dell K. Allen, Leo Alting, 1994. Provides a taxonomy of manufacturing processes and discusses general characteristics of the 10 fundamental families such as mass reducing, joining, hardening, and surface treatment. The individual processes themselves are described in the companion Reference Guide. Well illustrated. No bibliography. Annotation copyright by Book News Inc, Portland, OR.

Manufacturing Processes for Design Professionals Rob Thompson, 2007-11-30. An encyclopaedic guide to production techniques and materials for product and industrial designers, engineers, and architects. Today's product designers are presented with a myriad of choices when creating their work and preparing it for manufacture. They have to be knowledgeable about a vast repertoire of processes ranging from what used to be known as traditional crafts to the latest technology to enable their designs to be manufactured effectively and efficiently. Information on the internet about such processes is often unreliable, and search engines do not usefully organize material for designers. This fundamental new resource explores innovative production techniques and materials that are having an impact on the design industry worldwide. Organized into four easily referenced parts: Forming, Cutting, Joining, and Finishing. Over seventy manufacturing processes are explained in depth, with full technical descriptions, analyses of the typical applications, design opportunities, and considerations each process offers, and information on cost, speed, and environmental impact. The accompanying step-by-step case studies look at a product or component being manufactured at a leading international supplier. A directory of more than fifty materials includes a detailed technical profile, images of typical applications and finishes, and an overview of each material's design characteristics. With some 1,200 color photographs and technical illustrations specially commissioned for this book, this is the definitive reference for product designers, 3D designers, engineers, and architects who need a convenient, highly accessible, and practical reference.
