Inefficient Mapping Linda Knight, 2021 Working from a speculative more than human ontological position *Inefficient Mapping A Protocol for Attuning to Phenomena* presents a new experimental cartographic practice and non representational methodological protocol that attunes to the subaltern genealogies of sites and places proposing a wayfaring practice for traversing the land founded on an ethics of care As a methodological protocol inefficient mapping inscribes the histories and politics of a place by gesturally marking affective and relational imprints of colonisation industrialisation appropriation histories futures exclusions privileges neglect survival and persistence *Inefficient Mapping* details a research experiment and is designed to be taken out on mapping expeditions to be referred to consulted with and experimented with by those who are familiar or new to mapping The inefficient mapping protocol described in this book is informed by feminist speculative and immanent theories including posthuman theories critical cultural theories Indigenous and critical place inquiry as well as the works of Karen Barad Erin Manning Jane Bennett Maria Puig de la Bellacassa Elizabeth Povinelli and Eve Tuck and Marcia McKenzie which frame how inefficient mapping attunes to the matter tenses and ontologies of phenomena and how the interweaving agglomerations of theory critique and practice can remain embedded in experimental methodologies Publisher's website [Animal Tracks](#) Raina Mooncrest, AI, 2025-03-06 *Animal Tracks* reveals the hidden narratives etched into the earth by wildlife offering a comprehensive guide to deciphering footprints and understanding animal behavior This exploration is crucial for monitoring wildlife populations and gaining insights into animal life such as how tracks can reveal whether animals are hunting migrating or simply exploring The book emphasizes the value of track identification for anyone interested in nature biology and wildlife conservation The book progresses from basic track morphology to advanced tracking techniques It explains track measurement gait analysis and substrate interpretation enabling readers to distinguish between species For instance readers will discover how to differentiate between a bounding rabbit and a walking fox even on varied surfaces What sets this book apart is its practical approach focusing not only on identification but also on interpreting behavior and ecological roles based

on track patterns *History Maps* Evelyn Foster, AI, 2025-03-06 History Maps unveils the captivating narrative of cartography revealing how maps have shaped civilizations and fueled human ambition Far from being neutral representations maps reflect the cultural technological and political contexts of their creation The book explores how these tools have acted as agents of change influencing exploration trade and the very discoveries that define our understanding of the world The book traces the evolution of mapmaking from ancient times to modern satellite imagery illustrating how technological advancements and societal needs drove innovation It delves into how maps fueled the Age of Exploration enabling navigators to chart new territories and establish trade routes thereby transforming global economies Did you know that maps have been used to define borders justify territorial claims and even wage war This book adopts a narrative non fiction style blending scholarly rigor with engaging storytelling The book progresses across chapters starting with the fundamental principles of cartography and its historical development Subsequent chapters explore the role of maps in specific historical periods and geographical regions History Maps focuses primarily on the Western tradition of mapmaking given its dominant influence on global exploration and trade **Analysis of Wildlife Radio-Tracking Data** Gary C. White, Robert A. Train Your Mind, Change Your Brain Sharon Begley, 2008-11-12 Cutting edge science and the ancient wisdom of Buddhism have come together to reveal that contrary to popular belief we have the power to literally change our brains by changing our minds Recent pioneering experiments in neuroplasticity the ability of the brain to change in response to experience reveal that the brain is capable of altering its structure and function and even of generating new neurons a power we retain well into old age The brain can adapt heal renew itself after trauma compensate for disabilities rewire itself to overcome dyslexia and break cycles of depression and OCD And as scientists are learning from studies performed on Buddhist monks it is not only the outside world that can change the brain so can the mind and in particular focused attention through the classic Buddhist practice of mindfulness With her gift for making science accessible meaningful and compelling science writer Sharon Begley illuminates a profound shift in our understanding of how the brain and the mind interact and takes us to the leading edge of a revolution in what it means to be human Praise for Train Your Mind Change Your Brain There are two great things about this book One is that it shows us how nothing about our brains is set in stone The other is that it is written by Sharon Begley one of the best science writers around Begley is superb at framing the latest facts within the larger context of the field This is a terrific book Robert M Sapolsky author of Why Zebras Don't Get Ulcers Excellent elegant and lucid prose an open mind here will be rewarded Discover A strong dose of hope along with a strong dose of science and Buddhist thought The San Diego Union Tribune

Riley,2015-06-01 A practical guide that explains how we can design roads that are compatible with populations of small wildlife Few of us think twice about driving on roads Yet the very presence of roads and the act of driving on them can impact the ecological infrastructure that supports an animal s daily life What chance does a turtle have of successfully laying its eggs when it needs to traverse a busy highway Is it realistic to expect small mammals to breed when an interstate thoroughfare subdivides their population These are the sorts of challenges faced by small often slow moving animals challenges that road engineers and ecologists are trying to address For countless small species vehicles traveling at high speeds are nothing less than missiles shooting across migration pathways For too many animals the danger can lead to the loss of populations in part because they simply are not programmed to react to traffic Salamanders faced with a two lane road between the forest and their aquatic breeding site for example will typically cross that road regardless of the congestion The result can be hundreds of flattened animals in a single night Roads and Ecological Infrastructure is the first book to focus on reducing conflict between roads and small animals Highlighting habitat connections and the challenges and solutions from both transportation and ecological perspectives the volume covers various themes including animal behavior related to roads and design approaches to mitigate the negative effects of roads on wildlife The chapter authors from transportation experts to university researchers each promote a goal of realistic problem solving Conceptual and practical this book will influence the next decade or more of road design in ecologically sensitive areas and should prevent countless unnecessary wildlife fatalities Published in association with The Wildlife Society
