This galaxy is the nearest to our own, located about 2.5 million light-years away. It is a spiral galaxy, similar in structure to the Milky Way.

Binary Stars
Most stars in the universe are part of a binary system, where two stars orbit each other. This diagram shows a red dwarf and a white dwarf in such a system.

THE HEAVENS

NATIONAL GEOGRAPHIC

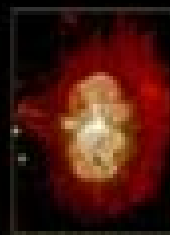

The vastness of space is awe-inspiring, from the tiny specks of dust and gas that form the clouds of the universe to the brilliant stars and planets that light up the night sky. In this special issue, we explore the wonders of the cosmos, from the birth of stars to the end of the universe. We look at the latest discoveries in astronomy, from the discovery of exoplanets to the search for dark matter. We also look at the history of astronomy, from the ancient Greeks to the modern era of space exploration. This is a journey through the heavens, a journey that will take us to the very edges of the universe.

Star Formation
This image shows a region where new stars are being born. The gas and dust in the cloud are being heated and ionized by the young stars, creating a bright, glowing nebula.

Black Hole
This image shows a black hole, a region of space where the gravity is so strong that nothing can escape. The bright ring of light is the accretion disk, the material being pulled into the black hole.

Galaxy Cluster
This image shows a galaxy cluster, a group of galaxies bound together by gravity. The galaxies are moving towards the center of the cluster, where the gravity is the strongest.

THE UNIVERSE
The universe is everything that exists, from the smallest particle to the largest galaxy. It is a vast, expanding space that contains billions of galaxies, each with billions of stars. The universe is constantly changing, and we are just beginning to understand its true nature.

THE SOLAR SYSTEM
The solar system is the part of the universe that contains our planet, Earth. It consists of the Sun, the planets, and the moons. The solar system is a small part of the universe, but it is the only one we know of that contains life.

THE EARTH
The Earth is the only planet in the solar system that has life. It is a small, blue and white sphere in the vastness of space. The Earth is a complex system, with a solid surface, a liquid ocean, and a gaseous atmosphere. It is the only place we know of where life can exist.

THE FUTURE
The future of the universe is uncertain. It could expand forever, or it could collapse in on itself. We do not know for sure, but we are working to understand the future of the universe. This is a journey that will take us to the very edges of the universe.
