Geoelectromagnetic Investigation of the Earth's Crust and Mantle I.I. Rokityansky,2012-12-06 Electrical conductivity is a parameter which characterizes composition and physical state of the Earth s interior Studies of the state equations of solids at high temperature and pressure indicate that there is a close relation between the electrical conductivity of rocks and temperature Therefore measurements of deep conductivity can provide knowledge of the present state and temperature of the Earth s crust and upper mantle matter Information about the temperature of the Earth s interior in the remote past is derived from heat flow data Experimental investigation of water containing rocks has revealed a pronounced increase of electrical conductivity in the temperature range D from 500 to 700 DC which may be attributed to the beginning of fractional melting Hence anomalies of electrical conductivity may be helpful in identifying zones of melting and dehydration The studies of these zones are perspective in the scientific research of the mobile areas of the Earth s crust and upper mantle where tectonic movements processes of the regional metamorphism and of forming mineral deposits are most intensive Thus in the whole set of research on physics of the Earth the studies of electrical conductivity of deep seated rocks appear beyond doubt very important

Neural Network Methods in Natural Language Processing Yoav Goldberg,2017-04-17 Neural networks are a family of powerful machine learning models and this book focuses on their application to natural language data The first half of the book Parts I and II covers the basics of supervised machine learning and feed forward neural networks the basics of working with machine learning over language data and the use of vector based rather than symbolic representations for words It also covers the computation graph abstraction which allows to easily define and train arbitrary neural networks and is the basis behind the design of contemporary neural network software libraries The second part of the book Parts III and IV introduces more specialized neural network architectures including 1D convolutional neural networks recurrent neural networks conditioned generation models and attention based models These architectures and techniques are the driving force behind state of the art algorithms for machine translation syntactic parsing and many other applications Finally we also discuss tree shaped networks structured prediction and the prospects of multi task learning
