A. Martini, R. Siebert, 2013-11-11 In the late summer of 1967 several patients suffering from a severe disease were admitted to the Department of Medicine of the Marburg University It soon became obvious that the illness was a hitherto unknown infectious disease The number of afflicted patients increased to 23 Several cases were observed in Frankfurt Main at the same time and some weeks later also in Belgrade Yugo slavia Common to all the patients was previous contact with the blood or tissues of Cercopithecus aethiops the vervet monkey Altogether 31 people became ill and 7 died It was soon apparent that the infectious agent was neither bacterial nor rickettsial in origin but that a viral etiology was probable Most of the known viral diseases were excluded and the infectious agent was shown to be a hitherto unknown virus with many peculiar characteristics it infects guinea pigs but not adult mice and is larger than known viruses and of different shape This agent was called the Marburg virus since most of the cases had occurred in Marburg and the greater part of the laboratory work

leading to the detection of the virus was performed in Marburg *Marburg- and Ebolaviruses* Elke Mühlberger, Lisa L. Hensley, Jonathan S. Towner, 2017-12-23 This volume provides an overview of recent advances in our understanding of the biology of marburg and ebolaviruses It focuses on four essential areas 1 ecology outbreaks and clinical management 2 disease pathogenesis and protection 3 virus replication inside the cell and 4 molecular tools for virus study and taxonomy For 50 years these viruses have spilled over sporadically and without warning from their wildlife reservoirs often causing major outbreaks and high fatalities The consequences can be devastating with a clear potential for global reach as demonstrated by the 2013 West African outbreak of Ebola virus which led to over 28 000 reported cases across three continents and more than 11 000 deaths Given the international threat posed by these viruses the pace and scope of basic research have also greatly intensified ranging from studies of virus emergence epidemiology antiviral countermeasures and human disease to detailed mechanistic studies of virus entry replication virion assembly and protein structure Written by internationally respected experts this book will appeal to a wide audience and be a valuable resource for basic researchers clinicians and advanced students alike Human and Related Viruses Edouard Kurstak, Christine Kurstak, 2013-10-22 Comparative Diagnosis of Viral Diseases II Human and Related Viruses Part B is devoted to the diagnosis of viral diseases and is based on the new comparative unifying concept of the viral world The work demonstrates that the comparison of and the discrimination among viruses according to the criteria of classification of the International Committee on Taxonomy of Viruses and to the diseases caused by these viruses irrespective of the species involved are essential for their diagnosis and prevention The book is organized into five parts Part I contains papers on unclassified viruses while Part II focuses on cancer viruses Part III examines the role of vaccines and chemotherapy in the control of viral diseases Part IV discusses the development of the development of the WHO reporting system on virus diseases Part V deals with viral diagnostic reagents and newer diagnostic methods This book will interest all clinical virologists and immunologists and veterinarians and research workers It is addressed particularly to the professionals of public health and veterinary sciences who work in the area of diagnosis and control of viral diseases and to those who are interested in the problem of the relation between viruses and cancer *Replication-Competent Reporter-Expressing Viruses* Luis Martinez-Sobrido, 2018-09-27 This book is a printed edition of the Special Issue Replication Competent Reporter Expressing Viruses that was published in *Viruses* Fields Virology: Emerging Viruses Peter M. Howley, David M. Knipe, 2020-02-11 Now in four convenient volumes Field s Virology remains the most authoritative reference in this fast changing field providing definitive coverage of virology including virus biology as well as replication and medical aspects of specific virus families This volume of Field s Virology Emerging Viruses 7th Edition covers recent changes in emerging viruses providing new or extensively revised chapters that reflect these advances in this dynamic field **Emerging Challenges in Filovirus Infections** Samuel Ikwaras Okware, 2020-02-12 This book discusses the emerging challenges of the filovirus infections Ebola and Marburg virus disease It reviews the complex

ecology and role played by bats and other suspected intermediate hosts including pigs Also examined are the challenges for other modes of transmission and early diagnosis and detection The immunology and pathogenesis of the infections and the impact on the host s immune systems are discussed The rare occurrence of Marburg virus infection in pregnancy and the long term consequences of sexual transmission by survivors is further examined These discussions have the potential to support future management of outbreaks and guide research for vaccines and medication for Ebola and Marburg disease

Viral Infections of Humans Alfred S. Evans,2013-11-11 **Unconventional Agents and Unclassified Viruses** O.-R. Kaaden,W. Eichhorn,C.-P. Czerny,2012-12-06 Among unconventional agents and unclassified viruses the contributions to this volume focused on prion related diseases with special emphasis on bovine spongiform encephalopathy and human spongiform encephalopathies and Borna disease virus an agent known since long time to be pathogenic for horses and sheep which is now discussed as a potential pathogen for humans Additionally the volume contains articles about newly discovered viruses like porcine respiratory and reproductive syndrome virus and viruses that are classified only provisionally like African swine fever virus hepatitis C and E viruses or the arteriviruses **Animal model studies on viral infections** Akio Adachi,Tomoyuki Miura,2015-03-13 Understanding viral replication and pathogenicity properties in infected individuals is a major mission of animal virology Animal models are essential to analyze the in vivo viral characteristics and to develop countermeasures against viruses To fight against a wide variety of viruses basic studies with specific and or common approaches are required This Research Topic collects articles that describe studies on numerous virus species at various stages toward animal experiments i description evaluation new challenges of animal model studies ii experimental material methods for animal model studies iii observations for upcoming animal model studies Numbers of DNA and RNA viruses such as HHV 6 HPV Ebola virus HCV dengue virus HTLV 1 HIV 1 SIV and measles virus are covered by this special issue consisting of original research methods review mini review and opinion articles All readers would understand we believe and hope that animal model studies are critical for current virology as always **The 10 Deadliest and Most Dangerous Viruses in the World** Larry Slawson,2020-01-01 Throughout the world there exists numerous viruses and diseases capable of inflicting serious harm or death on the human population at large While treatment plans exist for a wide array of diseases viruses offer a unique challenge to doctors and researchers as antibiotics and traditional medicines are often ineffective against their attacks on the human body This book explores the 10 deadliest and most dangerous viruses known to currently exist in the world today After reading this work it is the author s hope that a better more developed understanding of viruses can be attained by his readers **The Soviet Biological Weapons Program** Milton Leitenberg,Raymond A Zilinskas,Jens H Kuhn,2012-06-29 This is the first attempt to understand the full scope of the USSR s offensive biological weapons research from inception in the 1920s Gorbachev tried to end the program but the U S and U K never obtained clear evidence that he succeeded raising the question whether the means for waging biological warfare could be present in Russia today

Zoonotic Diseases: Epidemiology, Multi-omics, and Host-pathogen interactions Lei Deng,Hong Yin,Kevin S. W. Tan ,Anastasios D. Tsaoasis,2024-10-21 Zoonotic diseases are infections that can be transmitted between people and animals These infections are caused by microorganisms such as viruses bacteria parasites and fungi Patients with zoonotic infections can experience severe and life threatening illness whilst others remain asymptomatic For example animals can harbor germs asymptomatically for long periods with no apparent impact on their own health However some microbes carried by animals can result in human illness depending on the zoonotic disease Furthermore it is widely reported that almost 60% of human diseases are zoonotic and at least 75% of the pathogens that cause diseases in humans are of zoonotic origin **Molecular Detection of Animal Viral Pathogens** Dongyou Liu,2016-05-25 Molecular Detection of Animal Viral Pathogens presents expert summaries on state of the art diagnostic approaches for major animal viral pathogens with a particular emphasis on identification and differentiation at the molecular level Written by specialists in related research areas each chapter provides a concise overview of an individual virus *Feigin and Cherry's Textbook of Pediatric Infectious Diseases - E-Book* James Cherry,Sheldon L.
