The Category of the Person Michael Carrithers, Steven Collins, Steven Lukes, 1985-12-27 The concept that people have of themselves as a person is one of the most intimate notions that they hold Yet the way in which the category of the person is conceived varies over time and space In this volume anthropologists philosophers and historians examine the notion of the person in different cultures past and present Taking as their starting point a lecture on the person as a category of the human mind given by Marcel Mauss in 1938 the contributors critically assess Mauss's speculation that notions of the person rather than being primarily philosophical or psychological have a complex social and ideological origin Discussing societies ranging from ancient Greece India and China to modern Africa and Papua New Guinea they provide fascinating descriptions of how these different cultures define the person But they also raise deeper theoretical issues What is universally constant and what is culturally variable in people's thinking about the person How can these variations be explained Has there been a general progressive development toward the modern Western view of the person What is distinctive about this How do one's notions of the person inform one's ability to comprehend alternative formulations These questions are of compelling interest for a wide range of anthropologists philosophers historians psychologists sociologists orientalists and classicists The book will appeal to any reader concerned with understanding one of the most fundamental aspects of human existence

The History and Poetics of Scientific Biography Thomas Söderqvist, 2016-03-03 Biographies of scientists carry an increasingly prominent role in today's publishing climate Traditional historical and sociological accounts of science are complemented by narratives that emphasize the importance of the scientific subject in the production of science Not least is the realization that the role of science in culture is much more accessible when presented through the lives of its practitioners Taken as a genre such biographies play an important role in the public understanding of science In recent years there has been an increasing number of monographs and collections about biography in general and literary biography in

particular However biographies of scientists engineers and medical doctors have rarely been the topic of scholarly inquiry As such this volume of essays will be welcomed by those interested in the genre of science biography and who wish to re-examine its history foundational problems and theoretical implications Borrowing approaches and methods from cultural studies and the history philosophy and sociology of science the contributions cover a broad range of subjects periods and locations By presenting such a rich diversity of essays the volume is able to chart the reoccurring conceptual problems and devices that have influenced scientific biographies from classical antiquity to the present day In so doing it provides a compelling overview of the history of the genre suggesting that the different valuations given scientific biography over time have been largely fuelled by vested professional interests
