**The Myth of the Global Market** Giulio Palermo,2024-11-06 Capitalism is often held to be the best of all possible worlds or even the only possible world in which the market is underpinned by the highest principles of rationality efficiency

and compatibility with democracy These truths are backed up by economists a group who present themselves as impartial experts capable of operating independently of ideology or political intrusion This book questions these scientific truths It discusses the ideological foundations of neoliberalism and the value judgements often kept implicit in economic theory It analyses the claims of the key pillars of neoliberal economics the neoclassical and Austrian schools of economic thought and the myths which they propagate about markets It is shown that there is a deep division between the theoretical market the fair market the free market the market of equal opportunities the market as producer of wealth the market as a forum for discovering and sharing information and the reality This is not a simple problem of realism The problem also concerns the perfect market idealized by these theories which is subjected to criticism through a process of demystification that reveals the true ideological content hidden behind the market myths There have been various attempts by heterodox schools of economics to move beyond this flawed view of the market However these have struggled to gain mainstream attention because of the cultural and political dominance of the neoliberal mindset which is claimed to be objective and neutral Ultimately the book argues that neoliberalism needs to be countered with an alternative based on a progressive decommodification of social relations to reduce the real and imagined significance of the market This book is essential reading for those interested in Marxist political economy heterodox economics and critiques of neoliberalism capitalism and markets

**The Myths of Technology** Judith Burnett, Peter Senker, Kathy Walker, 2009 This book questions whether technologies are the rational tangible scientific forward thinking neutral objects they are so often perceived to be exploring instead how powerful mythic ideas about technologies drive our social understanding and our expectations of them Against a rising tide of information we encounter significant technological scientific and medical advances which promise to create an educated humane and equal world This book explores that promise deconstructing technologies to conclude that though they do afford us significant and empowering advances they remain largely cloaked in mystery and often promise more than they can deliver Contributors from diverse intellectual backgrounds and political and epistemological stances spanning sociology and psychosocial

The problem is not as often claimed that Americans recklessly take on too much debt. The problem is that US debt policies have no basis in reality. Weaving together the histories and trends of US debt policy with her own family story, Chrystin Ondersma debunks the myths that have long governed debt policy, like the belief that debt leads to prosperity or the claim that bad debt is the result of bad choices, both of which nest in the overarching myth of a free market unhindered by government interference and accessible to all. In place of these stale narratives, Ondersma offers a compelling, flexible, and reality-based taxonomy rooted in the internationally recognized principle of human dignity. Ondersma's new categories of debt, grounded in abolitionist principles, revolutionize how policymakers are able to think about debt, which will in turn revolutionize the American debt landscape itself.
