Chemistry of Named Organic Reactions and Reagents Dr. Bhimraj Gawade, Mr. I. G. Nannaware, 2022-08-04 In chemical reactions the ene reaction also known as the Alder ene reaction named after its discoverer Kurt Alder for whom it was named in 1943 is a reaction between an alkene containing an allylic hydrogen and a molecule containing a multiple bond the enophile resulting in the formation of a multiple bond The migration of an ENE double bond and an increase in the hydrogen shift of 1.5 creates a new hydrogen bond It is a substituted alkene in which the double bond has been shifted to the allyl position as shown in the diagram that follows this procedure

**Name Reactions in Organic Chemistry** Alexander R. Surrey, 2013-10-22 Name Reactions in Organic Chemistry 2nd Edition incorporates new pertinent material and brings up to date the name reactions described in the first edition Along with this revision several additional name reactions have been included As with the first edition the selections were based on general interest recurrence in the literature and the contributions of the name chemist to the historical development of organic chemistry Although the writer does not pretend to be an historian of chemistry it seemed desirable to include along with the reactions pertinent information regarding the chemist's background his training his contemporaries and his contributions This book contains 103 name reactions arranged alphabetically The general plan was to present a description of each reaction its scope applicability and limitations and to bring it up to date in regard to any new developments
