Narrative Medicine Honoring The Stories Of Illness:

Narrative Medicine Rita Charon, 2006-03-02 Narrative medicine has emerged in response to a commodified health care system that places corporate and bureaucratic concerns over the needs of the patient. Generated from a confluence of sources including humanities and medicine, primary care medicine, narratology, and the study of doctor-patient relationships, narrative medicine is medicine practiced with the competence to recognize, absorb, interpret, and be moved by the stories of illness. By placing events in temporal order with beginnings, middles, and ends, and by establishing connections among things using metaphor and figural language, narrative medicine helps doctors to recognize patients and diseases, convey knowledge, accompany patients through the ordeals of illness, and according to Rita Charon, can ultimately lead to more humane, ethical, and effective health care. Trained in medicine and in literary studies, Rita Charon is a pioneer of and an authority on the emerging field of narrative medicine. In this important and long-awaited book, she provides a comprehensive and systematic introduction to the conceptual principles underlying narrative medicine, as well as a practical guide for implementing narrative methods in health care. A true milestone in the field, it will interest general readers and experts in medicine and humanities and literary theory.

Narrative Medicine: Trauma and Ethics Anders Juhl Rasmussen, Morten Sodemann, 2024-05-14 This new volume repositions narrative medicine and trauma studies in a global context with a particular focus on ethics. Trauma is a rapidly growing field of especially literary and cultural studies, and the ways in which trauma has asserted its relevance

across disciplines which intersect with narrative medicine and how it has come to widen the scope of narrative research and medical practice constitute the principal concerns of this volume This collection brings together contributions from established and emerging scholars coming from a wide range of academic fields within the faculty of humanities that include literary and media studies psychology philosophy history anthropology as well as medical education and health care studies This crossing of disciplines is also represented by the collaboration between the two editors Most of the authors in the volume use narrative medicine to refer to the methodology pioneered by Rita Charon and her colleagues at Columbia University but in some chapters the authors use it to refer to other methodologies and pedagogies utilizing that descriptor Trauma is today understood both in the restricted sense in which it is used in the mental health field and in its more widespread popular usage in literature This collection aspires to prolong deepen and advance the field of narrative medicine in two important aspects by bringing together both the cultural and the clinical side of trauma and by opening the investigation to a truly global horizon

The Principles and Practice of Narrative Medicine Rita Charon, 2017 The Principles and Practice of Narrative Medicine articulates the ideas methods and practices of narrative medicine Written by the originators of the field this book provides the authoritative starting place for any clinicians or scholars committed to learning of and eventually teaching or practicing narrative medicine

Narrative Medicine in Hospice Care Tara Flanagan, 2019-12-13 Narrative medicine an interdisciplinary field that brings together the studies of literature and medicine offers both a way of understanding patient identity and a method for developing a clinician's responsiveness to patients While recognizing the value of narrative medicine in clinical encounters including the ethical aspects of patient discourse Tara Flanagan examines the limits of narrative practices for patients with cognitive and verbal deficits In Narrative Medicine in Hospice Care Identity Practice and Ethics through the Lens of Paul Ricoeur Flanagan contends that the models of selfhood and care found in the work of Ricoeur can offer a framework for clinicians and caregivers regardless of the verbal and cognitive capabilities of a patient at the end of life In particular Ricoeur's concept of patient identity connects with the narrative method of life review in hospice and offers an opportunity to address the religious and spiritual dimensions of the patient experience

Voices of Illness: Negotiating Meaning and Identity Peter Bray, 2019-03-27 This book is a scholarly collection of interdisciplinary perspectives and practices that examine the positive potential of attending to the voices and stories of those who live and work with illness in real world settings Its international contributors offer case studies and research projects illustrating how illness can disrupt highlight and transform themes in personal narratives forcing the creation of new biographies As exercises in narrative development and autonomy the evolving content and expression of illness stories are crucial to our understanding of the lived experience of those confronting life changes The international contributors to this volume demonstrate the importance of hearing understanding and effectively liberating voices impacted by illness and change Contributors include Tineke Abma Peter Bray Verusca Calabria Agnes Elling Deborah Freedman

Meza, Daniel S. Passerman, 2011 Scientific evidence based medicine is increasingly seen as fundamental to providing effective healthcare but narrative based medicine sheds light on social and interpersonal aspects of the practitioner patient interaction which can also greatly affect healthcare outcomes The philosophies underlying these two approaches seem to contrast yet those who can integrate both into their practice are among the most successful medical professionals Integrating Narrative Medicine and Evidence based Medicine provides answers to the key question of how medical practitioners can best put both approaches into practice It anticipates a future where evidence based practice will be expected of all medical professionals but contends that the integration of a narrative based approach will also be crucial presenting a unique perspective on structuring the patient professional encounter for optimum results It develops a cultural analysis and socio cultural theory of the science of healing and describes an efficient method by which medical practitioners can find and use medical research at the point of care with current technology and skills This addresses the need for translational science moving research into practice identified by the National Institutes of Health This book will be essential reading for educators of medical students and postgraduate trainees behavioral scientists psychologists social scientists working in medical settings and health managers and administrators Medical students and postgraduate trainees will also find it useful in their learning

Narrative Medicine in Education, Practice, and Interventions Anders Juhl Rasmussen, Anne-Marie Mai, Helle Ploug Hansen, 2022-11-01 Narrative medicine is a growing field of research and teaching It arises from an interdisciplinary interest in person centered medicine and is regarded as a major innovation in the medical humanities This anthology is the first of its kind which integrates chapters on legitimizing narrative medicine in education practice and research on analyzing types of patient narratives and on studying interventions applying vulnerable or shared reading creative writing or Socratic dialogue as a means of rehabilitation and mental care In her foreword Rita Charon who originally coined the term narrative medicine recognizes this expansion of the field and name it system narrative medicine

The Future of Bioethics Howard Brody, 2009 Drawing on his previous work Brody argues that most of the issues concerned involve power disparities Bioethics response ought to combine new concepts that take power relationships seriously with new practical activities that give those now lacking power a greater voice A chapter on community dialogue outlines a role for the general public in bioethics deliberations Lessons about power initially learned from feminist bioethics need to be expanded into new areas cross cultural racial and ethnic and global and environmental issues as well as the concerns of persons with disabilities Bioethics has neglected important ethical controversies that are most often discussed in primary care such as patient centered care evidence based medicine and pay for performance

The Doctor-Patient Relationship and the Nineteenth-Century French Novel Sarah Jones, 2025-03-29 The Doctor

Patient Relationship and the Nineteenth Century French Novel analyses the representation of the doctor patient relationship in the nineteenth century French novel notably in the words of Balzac Sand Stendhal and Zola It argues that the doctor patient relationship is represented in these novels as a site of interpersonal negotiation wherein the meaning of medical authority embodied experience and the spectre of illness and pain are mediated and reimaged This book highlights how the doctor patient relationship is often idealized by the novel wherein the doctor is characterised as a both dedicated to his patients and local community as well as being a God like master of life death and medical knowledge The volume suggests that the doctor patient encounter is often depicted as a separate although inherently related concept that undermines this idealisation of medical relationships The doctor patient encounter thereby questions the hegemonic power of medical practitioners over their patients by pointing towards how novels depict patients as resisting and even manipulating their doctors The book identifies and explores other important themes within the doctor patient relationship such as the medical gaze regard m dical power relationships and the use of embodied metaphor In particular the book highlights how the doctor patient relationship is often a confrontation between scientific knowledge and the experience of gender and disability The book s conceptual framework is derived from the critical medical humanities and the volume revitalises and reframes the doctor patient relationship by considering the intrinsic slippage between idealised relationships and critical encounters The book uses close readings of its corpus to understand how medical practice is debated and undermined concurrently with its idealisation It places literary works within a new historical context by reading across novels within their medical and scientific context and situates them for the first time in the intellectual context of the critical medical humanities The book points forward to how nineteenth century French novels can reform how the critical medical humanities views the medical relationship and the potential impact on real world patients *Narrating Illness: Prospects and Constraints* Joanna

Davidson,Yomna Saber,2019-07-22 This volume was first published by Inter Disciplinary Press in 2016 Telling the story of illness emerges from a landscape of pain grief and loss but its therapeutic value is indubitable This volume grapples with the potentials and limitations of such narratives as diverse cultural perceptions and realities are granted the voice to probe into those stories from literary and textual material as well as empirical ethnographic historical and personal bases Some of the chapters draw upon the capacity of storytelling to heal bodies and souls whereas others provide an important corrective to this overwhelmingly optimistic portrayal by focusing on the limits of storytelling and narrative to address physical and psychic trauma Despite the different approaches what ties these chapters together is a more focused textual and contextual analysis of the intersection between forms of storytelling and sharing the experience of illness as studied and witnessed and sometimes even lived by the authors of the volume **The Oxford Handbook of Qualitative Research** Patricia

Leavy,2014 The Oxford Handbook of Qualitative Research presents a comprehensive and student friendly overview of the field of qualitative research and is intended for students of all levels faculty and researchers across the social sciences It

provides strong focus on methods instruction with coverage of theoretical approaches analysis writing evaluation and the politics of research

Revitalizing Health Through Humanities: Foregrounding Unheard Trends L. Santhosh Kumar, Barnashree Khasnobis, Sreedevi Santhosh, 2024-11-28 Health Humanities in contemporary times has enabled exploration of the unexplored chartered terrains in literary paradigms Scholars in the field of Humanities and Sciences have been engaging with the praxis of applying concepts from both disciplines revising the approach towards Health Care and Humanities Due to interdisciplinary and multidisciplinary methodologies of reading literary texts they have been reinforcing a paradigm shift from the conventional understanding of narratives in Literature and Health Care Traditional discursive boundaries between the disciplines of Health and Humanities are collapsing due to a comprehensive and nuanced interpretation of the shared ontological foundation between the two Humanism Terminologies like Displacement Dislocation and Disjunction unite Health and Humanities and they also make the unknown known Health Humanities explores the different multitudes of narration in the literary arena and it represents diverse voices of literature It also showcases the importance of re reading a text owing to its autotelic status The authors who have contributed chapters for this book have meticulously selected diverse texts and contexts embedded in the dynamism of Health Humanities This book is an impetus for academicians from the field of Humanities and Sciences who desire to venture into new epistemes towards Health Humanities

Making Medical Knowledge Miriam Solomon, 2015-04-02 How is medical knowledge made New methods for research and clinical care have reshaped the practices of medical knowledge production over the last forty years Consensus conferences evidence based medicine translational medicine and narrative medicine are among the most prominent new methods Making Medical Knowledge explores their origins and aims their epistemic strengths and their epistemic weaknesses Miriam Solomon argues that the familiar dichotomy between the art and the science of medicine is not adequate for understanding this plurality of methods The book begins by tracing the development of medical consensus conferences from their beginning at the United States National Institutes of Health in 1977 to their widespread adoption in national and international contexts It discusses consensus conferences as social epistemic institutions designed to embody democracy and achieve objectivity Evidence based medicine which developed next ranks expert consensus at the bottom of the evidence hierarchy thus challenging the authority of consensus conferences Evidence based medicine has transformed both medical research and clinical medicine in many positive ways but it has also been accused of creating an intellectual hegemony that has marginalized crucial stages of scientific research particularly scientific discovery Translational medicine is understood as a response to the shortfalls of both consensus conferences and evidence based medicine Narrative medicine is the most prominent recent development in the medical humanities Its central claim is that attention to narrative is essential for patient care Solomon argues that the differences between narrative medicine and the other methods have been exaggerated and offers a pluralistic account of how all the methods interact and sometimes conflict The result is both

practical and theoretical suggestions for how to improve medical knowledge and understand medical controversies

Faculty Health in Academic Medicine Thomas Cole, Thelma Jean Goodrich, Ellen R. Gritz, 2009-01-06 In the 21st century academic medical centers across the United States continue to make scientific breakthroughs to make improvements in patient care and to provide the most advanced information and guidance in matters affecting public health The signs of growth are everywhere in new research buildings new partnerships with industry new forms of molecular medicine and new sensitivity to the role of the human spirit in healing This growth is due in large part to the dedication and productivity of our faculty who are providing more patient care more research more teaching and more community service than ever before Today there are roughly 135 000 physicians scientists and other faculty working at approximately 125 academic medical centers around the country Increasingly they are asked to do more with less Since the 1990s academic medical centers in the United States have lost the financial margin they once enjoyed thereby putting new pressures on research education and clinical care Medical school faculty previously given funded time for teaching and research are increasingly drafted to bring in clinical revenues to cover their salaries Dedicated to the missions of research teaching and care our faculty have responded well to these challenges and perform at a very high level However we are beginning to see the results of ongoing stress

eMessaging and the Physician/Patient Dynamic Susan M. Wieczorek, 2019-12-12 Ten years after the adoption of the HITECH Act of 2009 eMessaging and the Physician Patient Dynamic Practices in Transition examines the complex interlocking forces at play when mandates for electronic health records EHRs and electronic messaging within secured health portals forced an unprecedented transformation of the healthcare environment Technological sociological medical economic political governmental legal and communication issues converged forever altering the medicological environment a space within which health professionals and patients alike strive towards efficacious satisfying transactions that lead to improved health Susan M Wieczorek's analysis discusses the layers of policies and regulations that thrust healthcare users often unwillingly into the newly required practice of online communication between physicians and patients Wieczorek also compares and contrasts rural and urban early adoption practices through the use of surveys critical incident reports and oral histories and anticipates future trends in data mining of electronic messaging by demonstrating a content analysis of over 60 000 electronic medical transactions within secured health portals This book identifies the key converging influences that affected the real life early adopters amid this transformation process and provides a practical foundation for current on going practice applications while anticipating the inevitable challenges of future health communication technologies Scholars of communication health and media studies will find this book particularly useful

Unreliable Narration and Trustworthiness Vera Nünning, 2015-02-24 Though the phenomenon known as unreliable narration or narrative unreliability has received a lot of attention during the last two decades narratological research has mainly focused on its manifestations in narrative fiction particularly in homodiegetic or first person narration Except for film forms and functions of unreliable

narration in other genres media and disciplines have so far been relatively neglected The present volume redresses the balance by directing scholarly attention to disciplines and domains that narratology has so far largely ignored It aims at initiating an interdisciplinary approach to and debate on narrative unreliability exploring unreliable narration in a broad range of literary genres other media and non fictional text types contexts and disciplines beyond literary studies Crossing the boundaries between genres media and disciplines the volume acknowledges that the question of whether or not to believe or trust a narrator transcends the field of literature The issues of un reliability and un trustworthiness play a crucial role in many areas of human life as well as a wide spectrum of academic fields ranging from law to history and from psychology to the study of culture

Diagnosis Narratives and the Healing Ritual in Western Medicine James Meza,2018-07-17 The dominance of illness narratives in narrative healing studies has tended to mean that the focus centers around the healing of the individual Meza proposes that this emphasis is misplaced and the true focus of cultural healing should lie in managing the disruption of disease and death cultural or biological to the individual s relationship with society By explicating narrative theory through the lens of cognitive anthropology Meza reframes the epistemology of narrative and healing moving it from relativism to a philosophical perspective of pragmatic realism Using a novel combination of narrative theory and cognitive anthropology to represent the ethnographic data Meza s ethnography is a valuable contribution in a field where ethnographic records related to medical clinical encounters are scarce The book will be of interest to scholars of medical anthropology and those interested in narrative history and narrative medicine

The Patient's Wish to Die Christoph Rehmann-Sutter,Heike Gudat,Kathrin Ohnsorge,2015-06-04 Wish to die statements are becoming a frequent phenomenon in terminally ill patients Those confronted by these statments need to understand the complexity of such wishes so they can respond competently and compassionately to the requests If misunderstood the statements can be taken at face value and the practitioner may not recognise that a patient is in fact experiencing ambivalent feelings at the end of life or they may misinterpret the expressed wish to die as a sign of clinical depression Public debate about the morality and ethics of various end of life care options has exploded in recent years However it has never been sensitive to the finer aspects of clinical reality or the experiences of patients The Patient s Wish to Die Research Ethics and Palliative Care brings together that reality and the patient s voice combining them with different research approaches It presents the best available knowledge and research methodologies about patients wishes at the end of life together with a series of ethical views and a discussion about the clinical implications for palliative care The book presents material in an open and unbiased manner whilst remaining sensitive to the spiritual and existential dimensions of dying and to the different cultural views that provide meaning to the individual Written by the best specialists and ethics scholars from around the world including palliative care practitioners and end of life scholars from countries where assisted dying practices are legalized and from those where it isn t The The Patient s Wish to Die Research Ethics and Palliative Care will prove essential reading for all those working or studying in the field of palliative care
