Thorough and fair the quality of the essays is high This will certainly be the book on substance dualism Michael Tye University of Texas at Austin Substance dualism has for some time been dismissed as an archaic and defeated position in philosophy of mind but in recent years the topic has experienced a resurgence of scholarly interest and has been restored to contemporary prominence by a growing minority of philosophers prepared to interrogate the core principles upon which past objections and misunderstandings rest As the first book of its kind to bring together a collection of contemporary writing from top proponents and critics in a pro contra format the Blackwell Companion to Substance Dualism captures this ongoing dialogue and sets the stage for rigorous and lively discourse around dualist and physicalist accounts of human persons in philosophy Chapters explore emergent Thomistic Cartesian and other forms of substance dualism broadly conceived in dialogue with leading varieties of physicalism including animalism non reductive physicalism and constitution theory Loose Menuge and Moreland pair essays from dualist advocates with astute criticism from physicalist opponents and vice versa highlighting points of contrast for readers in thematic sections while showcasing today s leading minds engaged in direct debate Taken together essays provide nuanced paths of introduction for students and capture the imagination of professional philosophers looking to expand their understanding of the subject Skillfully curated and in touch with contemporary science as well as analytic theology the Blackwell Companion to Substance Dualism strikes a measured balanced between advocacy and criticism and is a first rate resource for researchers scholars and students of philosophy theology and neuroscience

A Physicalist Manifesto Andrew Melnyk,2003-10-09 A Physicalist Manifesto is a full treatment of the comprehensive physicalist view that in some important sense everything is physical Andrew Melnyk argues that the view is best formulated by appeal to a carefully worked out notion of realization rather than supervenience that so formulated physicalism must be importantly reductionist that it need not repudiate causal and explanatory claims framed in non physical language and that it has the a posteriori epistemic status of a broad scope scientific hypothesis Two concluding chapters argue in detail that contemporary science provides no significant empirical evidence against physicalism and some considerable evidence for it Written in a brisk candid and exceptionally clear style this 2003 book should appeal to professionals and students in philosophy of mind metaphysics and philosophy of science

Embodied Emotions Rebekka Hufendiek, 2015-12-07 In this book Rebekka Hufendiek explores emotions as embodied action oriented representations providing a non cognitivist theory of emotions that accounts for their normative dimensions Embodied Emotions focuses not only on the bodily reactions involved in emotions but also on the environment within which emotions are embedded and on the social character of this environment its ontological constitution and the way it scaffolds both the development of particular emotion types and the unfolding of individual emotional episodes In addition it provides a critical review and appraisal of current empirical studies mainly in psychophysiology and developmental psychology which are relevant to discussions about whether emotions are embodied as well as socially embedded The theory that Hufendiek puts forward denies the distinction between basic and higher cognitive emotions all emotions are embodied action oriented representations This approach can account for the complex normative structure of emotions and shares the advantages of cognitivist accounts of emotions without sharing their problems Embodied Emotions makes an original contribution to ongoing debates on the normative aspects of emotions and will be of interest to philosophers working on emotions embodied cognition and situated cognition as well as neuroscientists or psychologists who study emotions and are interested in placing their own work within a broader theoretical framework

A Theory of the Absolute Benedikt Paul Göcke, 2014-09-29 A Theory of the Absolute develops a worldview that is opposed to the dominant paradigm of physicalism and atheism It provides powerful arguments for the existence of the soul and the existence of the Absolute It shows that faith is not in contradiction to reason

Mental Causation Thomas Kroedel, 2020 Presents a comprehensive account of how the mind causes things to happen in the physical world This book is also available as Open Access

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one

of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best

characterization of a particular phenomenon **Mind and Body** Robert Kirk, 2014-12-18 A great deal of work in philosophy today is concerned with some aspect of the complex tangle of problems and puzzles roughly labelled the mind body problem This book is an introduction to it It is a readable lucid and accessible guide that provides readers with authoritative exposition and a solid and reliable framework which can be built on as needed The first chapter briefly introduces the subject and moves on to discuss mechanism the idea that minds are machines focusing on Searle's Chinese Room argument The next three chapters discuss dualism physicalism and some hard problems for physicalism especially those concerning phenomenal consciousness Chapters on behaviourism and functionalism follow The central mind body topics are then each given deeper consideration in separate chapters Intentionality is investigated via Fodor's doctrine of the Language of Thought taking account of connectionism The main theories of consciousness are examined and the author's own approach outlined The concluding chapter briefly resumes the theme of psychological explanation linking it to further topics Each chapter ends with a summary of the main points together with suggestions for further reading Consciousness and Object Riccardo Manzotti, 2017-10-19 What is the conscious mind What is experience In 1968 David Armstrong asked What is a man and replied that a man is a certain sort of material object This book starts from his question but proceeds along a different path The traditional mind brain identity theory is set aside and a mind object identity theory is proposed in its place to be

conscious of an object is simply to be made of that object Consciousness is physical but not neural This groundbreaking hypothesis is supported by recent empirical findings in both perception and neuroscience and is herein tested against a series of objections of both conceptual and empirical nature the traditional mind brain identity arguments from illusion hallucinations dreams and mental imagery The theory is then compared with existing externalist approaches including disjunctivism realism embodied cognition enactivism and the extended mind Can experience and objects be one and the same

Rediscovering Colors M. Watkins, 2012-12-06 In *Rediscovering Colors A Study in Pollyanna Realism* Michael Watkins endorses the Moorean view that colors are simple non reducible properties of objects Consequently Watkins breaks from what has become the received view that either colors are reducible to certain properties of interest to science or else nothing is really colored What is novel about the work is that Watkins unlike other Mooreans takes seriously the metaphysics of colors Consequently Watkins provides an account of what colors are how they are related to the physical properties on which they supervene and how colors can be causally efficacious without the threat of causal overdetermination Along the way he provides novel accounts of normal conditions and non human color properties The book will be of interest to any metaphysician and philosopher of mind interested in colors and color perception *Philosophy Of Biology* Elliott Sober, 2018-03-05 Perhaps because of its implications for our understanding of human nature recent philosophy of biology has seen what might be the most dramatic work in the philosophies of the special sciences This drama has centered on evolutionary theory and in the second edition of this textbook Elliott Sober introduces the reader to the most important issues of these developments With a rare combination of technical sophistication and clarity of expression Sober engages both the higher level of theory and the direct implications for such controversial issues as creationism teleology nature versus nurture and sociobiology Above all the reader will gain from this book a firm grasp of the structure of evolutionary theory the evidence for it and the scope of its explanatory significance
