Perceptual Neuroscience:

Perceptual Neuroscience Vernon B. Mountcastle,1998 This monumental work creates a new subdiscipline perceptual neuroscience Mountcastle gathers information from a vast number of sources reaching back through two centuries from phylogenetic comparative and neuroanatomical studies of the neocortex to rhythmicity and synchronization in neocortical networks and inquiries into the binding problem

Fine Art and Perceptual Neuroscience Paul Hackett,2014-01-10 Over the past decade the integration of psychology and fine art has sparked growing academic interest among researchers of these disciplines The author both a psychologist and artist offers up a unique merger and perspective of these fields Through the production of fine art which is directly informed by neuroscientific and optical processes this volume aims to fill a gap in the literature and understanding of the creation and perception of the grid image created as a work of art The grid image is employed for reasons discussed in the text to illustrate more general processes associated with the integration of vision visual distortion and painting Existing at the intersection of perceptual neuroscience psychology fine art and art history this volume concerns the act of painting and the process of looking More specifically the book examines vision and the effects of visual impairment and how these can be interpreted through painting within a theoretical framework of visual neuroscience

Lycan, 2024 Perceptual Content is the first book to discuss and compare the representational characters of all the traditional five senses It has three main topics or concerns the diversity of the senses the way the contents of sensory representations are layered and aspect perception perceiving as The Handbook of Speech Perception Jennifer S. Pardo, Lynne C. Nygaard, Robert E. Remez, David B. Pisoni, 2021-03-31 A wide ranging and authoritative volume exploring contemporary perceptual research on speech updated with new original essays by leading researchers Speech perception is a dynamic area of study that encompasses a wide variety of disciplines including cognitive neuroscience phonetics linguistics physiology and biophysics auditory and speech science and experimental psychology The Handbook of Speech Perception Second Edition is a comprehensive and up to date survey of technical and theoretical developments in perceptual research on human speech

Offering a variety of perspectives on the perception of spoken language this volume provides original essays by leading researchers on the major issues and most recent findings in the field Each chapter provides an informed and critical survey including a summary of current research and debate clear examples and research findings and discussion of anticipated advances and potential research directions The timely second edition of this valuable resource Discusses a uniquely broad range of both foundational and emerging issues in the field Surveys the major areas of the field of human speech perception Features newly commissioned essays on the relation between speech perception and reading features in speech perception and lexical access perceptual identification of individual talkers and perceptual learning of accented speech Includes essential revisions of many chapters original to the first edition Offers critical introductions to recent research literature and leading field developments Encourages the development of multidisciplinary research on speech perception Provides readers with clear understanding of the aims methods challenges and prospects for advances in the field The Handbook of Speech Perception Second Edition is ideal for both specialists and non specialists throughout the research community looking for a comprehensive view of the latest technical and theoretical accomplishments in the field **Neuroeconomics** Nathaniel D. Daw, 2013-08-13 This chapter reviews issues of current research in reinforcement learning theories and their neural substrates We consider how the formal constructs of states actions and rewards that these theories describe can be understood to map onto counterparts experienced by biological organisms learning in the real world In each case this correspondence involves significant difficulties However elaborated theoretical accounts from computer science clarify in each case how to extend these theories to more realistic circumstances while still preserving the core prediction error driven learning mechanism that has been prominent in neuroeconomic accounts **Neuroeconomics** Paul W. Glimcher, 2013-08-13 In the years since it first published Neuroeconomics Decision Making and the Brain has become the standard reference and textbook in the burgeoning field of neuroeconomics. The second edition a nearly complete revision of this landmark book will set a new standard This new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline The first of these sections provides useful introductions to the disciplines of microeconomics the psychology of judgment and decision computational neuroscience and anthropology for scholars and students seeking interdisciplinary breadth The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems Chapters on risk time preferences social preferences emotion pharmacology and common neural currencies each written by leading experts lay out the foundations of neuroeconomic thought The third section contains both overview and in depth chapters on the fundamentals of reinforcement learning value learning and value representation The fourth section The Neural Mechanisms for Choice integrates what is known about the decision making architecture into state of the art models of how we make choices The

final section embeds these mechanisms in a larger social context showing how these mechanisms function during social decision making in both humans and animals The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field A clear explanatory style and a single expository voice characterize all chapters making core issues in economics psychology and neuroscience accessible to scholars from all disciplines The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general Editors and contributing authors are among the acknowledged experts and founders in the field making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics psychology neuroscience and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning risk inter temporal choice drift diffusion models game theory and prospect theory make this an invaluable reference Published in association with the Society for Neuroeconomics www neuroeconomics org Full color presentation throughout with numerous carefully selected illustrations to highlight key concepts Border Between Seeing and Thinking Ned Block, 2023 The Border Between Seeing and Thinking explores questions about the relationship of perception and cognition not by appealing to intuitions as is common in philosophy but to empirical evidence including experiments in neuroscience and psychology

The Perceptual Structure of Three-Dimensional Art Paul M.W. Hackett, 2016-12-26 This book deals with philosophical aspects regarding the perception of spatial relationships in two and three dimensional art It provides a structural understanding of how art is perceived within the space created by the artwork and employs a mapping sentence and partial order mereology to model perceptual structure It reviews the writing of philosophers such as Paul Crowther and art theorists such as Krauss to establish the need for this research The ontological model established Paul Crowther is used to guide an interactive account of his ontology in the interpretations of the perceptual process of three dimensional abstract art to allow the formulation of a more comprehensive philosophical account The book uniquely combines structuralist and post structuralist approaches to artistic perception and understanding with a conceptual structure from facet theory which is clarified with the help of a mapping sentence and partial order mereology

The Attentional Shaping of Perceptual Experience Francesco Marchi,2020-01-23 This monograph presents a clear account of when and how attentional processes can shape perceptual experience This argument is based on the prediction error minimization model of the mind The author believes that the topic of attention should take a more central role in the debate about the influence of cognition on perception Inside he shows how this can be possible The hypothesis that cognition may shape perceptual experience has been traditionally labeled as the cognitive penetrability of perceptual experience Cognitive penetrability is relevant for several debates in philosophy and cognitive science It tackles the possibility of gathering genuine knowledge on the basis of perceptual information about the world delivered by sensory channels The

problem the author notes is that if our previously acquired belief can shape current perceptual experiences such experiences cannot serve as an adequate source of justification in retaining those beliefs or even forming new ones He argues that cognitive penetration may sometimes happen through attentional processes but that its occurrence need not undermine perceptual justification The book provides an overview of the cognitive penetrability debate The author discusses evidence that supports the occurrence of this phenomenon Overall this investigation offers readers a philosophical discussion of attention based on the biased competition theory It argues that attention is a property of mental representations that emerges from a metacognitive competition process Handbook of Neuroscience for the Behavioral Sciences, Volume 1 Gary G. Berntson, John T. Cacioppo, 2009-10-12 Handbook of Neuroscience for the Behavioral Sciences Volume 1 As technology has made imaging of the brain noninvasive and inexpensive nearly every psychologist in every subfield is using pictures of the brain to show biological connections to feelings and behavior Handbook of Neuroscience for the Behavioral Sciences Volume I provides psychologists and other behavioral scientists with a solid foundation in the increasingly critical field of neuroscience Current and accessible this volume provides the information they need to understand the new biological bases research tools and implications of brain and gene research as it relates to psychology The New Visual *Neurosciences* John S. Werner, Leo M. Chalupa, 2013-10-25 A comprehensive review of contemporary research in the vision sciences reflecting the rapid advances of recent years Visual science is the model system for neuroscience its findings relevant to all other areas This essential reference to contemporary visual neuroscience covers the extraordinary range of the field today from molecules and cell assemblies to systems and therapies It provides a state of the art companion to the earlier book The Visual Neurosciences MIT Press 2003 This volume covers the dramatic advances made in the last decade offering new topics new authors and new chapters The New Visual Neurosciences assembles groundbreaking research written by international authorities Many of the 112 chapters treat seminal topics not included in the earlier book These new topics include retinal feature detection cortical connectomics new approaches to mid level vision and spatiotemporal perception the latest understanding of how multimodal integration contributes to visual perception new theoretical work on the role of neural oscillations in information processing and new molecular and genetic techniques for understanding visual system development An entirely new section covers invertebrate vision reflecting the importance of this research in understanding fundamental principles of visual processing Another new section treats translational visual neuroscience covering recent progress in novel treatment modalities for optic nerve disorders macular degeneration and retinal cell replacement The New Visual Neurosciences is an indispensable reference for students teachers researchers clinicians and anyone interested in contemporary neuroscience Associate Editors Marie Burns Joy Geng Mark Goldman James Handa Andrew Ishida George R Mangun Kimberley McAllister Bruno Olshausen Gregg Recanzone Mandyam Srinivasan W Martin Usrey Michael Webster David Whitney Sections Retinal Mechanisms and Processes Organization of Visual Pathways Subcortical Processing

Murray, Mark T. Wallace, 2011-08-25 It has become accepted in the neuroscience community that perception and performance are quintessentially multisensory by nature Using the full palette of modern brain imaging and neuroscience methods The Neural Bases of Multisensory Processes details current understanding in the neural bases for these phenomena as studied across species stages of development and clinical statuses Organized thematically into nine sub sections the book is a collection of contributions by leading scientists in the field Chapters build generally from basic to applied allowing readers to ascertain how fundamental science informs the clinical and applied sciences Topics discussed include Anatomy essential for understanding the neural substrates of multisensory processing Neurophysiological bases and how multisensory stimuli can dramatically change the encoding processes for sensory information Combinatorial principles and modeling focusing on efforts to gain a better mechanistic handle on multisensory operations and their network dynamics Development and plasticity Clinical manifestations and how perception and action are affected by altered sensory experience Attention and spatial representations The last sections of the book focus on naturalistic multisensory processes in three separate contexts motion signals multisensory contributions to the perception and generation of communication signals and how the perception of flavor is generated. The text provides a solid introduction for newcomers and a strong overview of the current state of the field for experts The Neuroscience of Autism Spectrum Disorders Joseph D. Buxbaum, Patrick R. Hof, 2012-12-31 Autism is no longer considered a rare disease and the Center for Disease Control now estimates that upwards of 730 000 children in the US struggle with this isolating brain disorder New research is leading to greater understanding of and ability to treat the disorder at an earlier age It is hoped that further genetic and imaging studies will lead to biologically based diagnostic techniques that could help speed detection and allow early more effective intervention Edited by two leaders in the field this volume offers a current survey and synthesis of the most important findings of the neuroscience behind autism of the past 20 years With chapters authored by

experts in each topic the volume explores etiology neuropathology imaging and pathways models Offering a broad background of ASDs with a unique focus on neurobiology the volume offers more than the others on the market with a strictly clinical focus or a single authored perspective that fails to offer expert comprehensive coverage Researchers and graduate students alike with an interest in developmental disorders and autism will benefit as will autism specialists across psychology and medicine looking to expand their expertise Uniquely explores ASDs from a neurobiological angle looking to uncover the molecular cellular basis rather than to merely catalog the commonly used behavioral interventions Comprehensive coverage synthesizes widely dispersed research serving as one stop shopping for neurodevelopmental disorder researchers and autism specialists Edited work with chapters authored by leaders in the field around the globe the broadest most expert coverage available Reclaiming Cognition Rafael E. Núñez, Rafael Núñez, Walter J. Freeman, 1999 Traditional cognitive science cognitivism is Cartesian in the sense that it takes as fundamental the distinction between the mind and the world This leads to the claim that cognition is representational and best explained by classical AI and computational theory The authors in this volume develop a critique of cognitivism and introduce an alternative approach which owes more to evolutionary biology embodied robotics phenomenology and dynamical systems The Cognitive Neurosciences Michael S. Gazzaniga, 2004 The third edition of a work that defines the field of cognitive neuroscience with A Brief History of Psychology Michael extensive new material including new chapters and new contributors Wertheimer, 2012 This edition approaches psychology as a discipline with antecedents in philosophical speculation and early scientific experimentation It covers these early developments 19th century German experimental psychology and empirical psychology in tradition of William James the 20th century dubbed the age of schools and dominated by psychoanalysis behavioralism structuralism and Gestalt psychology as well as the return to empirical methods and active models of human agency Finally it evaluates psychology in the new millennium and developments in terms of women in psychology industrial psychology and social justice **Psychology of Touch and Blindness** Morton A. Heller, Edouard Gentaz, 2013-10-08 This book reviews the considerable body of research that has been done to evaluate the touch skills of blind people With an emphasis on cognitive and neuroscientific approaches it encompasses a wide ranging discussion of the theoretical issues in the field of touch perception and blindness The volume includes chapters on sensory aspects of touch perception in blind individuals multimodal relations and their implications for instruction and development and new technology including sensory aids and virtual touch A distinctive feature of the book is the inclusion of the practical applications of research in this area A significant characteristic of research on touch and imagery in congenitally blind individuals is that it speaks to the basic nature of spatial imagery and the importance and necessity or lack thereof of specific visual sensory experience for the acquisition of knowledge about space spatial layout and picture perception As such the book will not only appeal to researchers and professionals with an interest in touch and blindness but also to a wider audience of cognitive psychologists

and cognitive neuroscientists working in the field of perception *Psychology and Philosophy of Abstract Art* Paul M.W. Hackett,2016-05-25 This book examines how we perceive and understand abstract art in contrast to artworks that represent reality Philosophical psychological and neuroscience research including the work of philosopher Paul Crowther are considered and out of these approaches a complex model is developed to account for this experience The understanding embodied in this model is rooted in facet theory mapping sentences and partially ordered analyses which together provide a comprehensive understanding of the perceptual experience of abstract art
