Gelenbe,2009 This book presents fundamental contributions to computer science as written and recounted by those who made the contributions themselves As such it is a highly original approach to a OC living historyOCO of the field of computer science The scope of the book is broad in that it covers all aspects of computer science going from the theory of computation the theory of programming and the theory of computer system performance all the way to computer hardware and to major numerical applications of computers Benchmarking Transaction and Analytical Processing Systems Anja Bog,2013-07-11 Systems for Online Transaction Processing OLTP and Online Analytical Processing OLAP are currently separate The potential of the latest technologies and changes in operational and analytical applications over the last decade have given rise to the unification of these systems which can be of benefit for both workloads Research and industry have reacted and prototypes of hybrid database systems are now appearing Benchmarks are the standard method for evaluating comparing and supporting the development of new database systems Because of the separation of OLTP and OLAP systems existing benchmarks are only focused on one or the other With the rise of hybrid database systems benchmarks to assess these systems will be needed as well Based on the examination of existing benchmarks a new benchmark for hybrid database systems is introduced in this

book It is furthermore used to determine the effect of adding OLAP to an OLTP workload and is applied to analyze the impact of typically used optimizations in the historically separate OLTP and OLAP domains in mixed workload scenarios

Alkin,2004-02-19 Concern for evaluation theoretical prescriptions emerged about 40 years ago giving it a history that is both recent enough to be part of the living experience of many of today s theorists and old enough to afford an opportunity for an analysis of how the field has evolved over time This book examines current evaluation theories and traces their evolution with the point of view that theories build upon theories and therefore evaluation theories are related to each other Initially all evaluation was derived from social science research methodology and accountability concerns The way in which these evaluation roots grew to form a tree helps to provide a better understanding of evaluation theory Thus the book uses an evaluation theory tree as its central metaphor The authors posit that evaluation theories can be classified by the extent to which they focus on methods uses or valuing these three approaches form the major limbs of the tree In addition to the authors overview which analyzes the evaluation theory tree and connections among theories the book contains essays by most of the leading evaluation theorists In these pieces the evaluators comment on their own development and give their views of their placement upon the tree **Evaluation in Today's World** Veronica G. Mobile Agents Gian P. Picco, 2003-06-30 Recent years have witnessed the appearance of new paradigms for designing distributed applications where the application components can be relocated namicallly across the hosts of the network This form of code mobility lays the foundation for a new generation of technologies architectures models and plications in which the location at which the code is executed comes under the control of the designer rather than simply being a con guration accident Among the various avors of mobile code the mobile agent paradigm has become particularly popular Mobile agents are programs able to determine tonomously their own migration to a di erent host and still retain their code and state or at least a portion thereof Thus distributed computations do not necessarily unfold as a sequence of requests and replies between clients and mote servers rather they encompass one or more visits of one or more mobile agents to the nodes involved Mobile code and mobile agents hold the potential to shape the next gene tion of technologies and models for distributed computation The rst steps of this process are already evident today Web applets provide a case for the least sophisticated form of mobile code Java based distributed middleware makes creasing use of mobile code and the rst commercial applications using mobile agents are starting to appear
