**Information Computing and Applications, Part II** Rongbo Zhu, Yanchun Zhang, Baoxiang Liu, Chunfeng Liu, 2010-09-27 This volume contains the proceedings of the International Conference on Information Computing and Applications ICICA 2010 which was held in Tangshan China October 15-18, 2010. As future generation information technology, information computing and applications become specialized, information computing and applications including hardware, software, communications, and networks are growing with ever increasing scale and heterogeneity and becoming overly complex. The complexity is getting more critical along with the growing applications. To cope with the growing and computing complexity, information computing and applications focus on intelligent, self-manageable, scalable computing systems and applications to the maximum extent possible without human intervention or guidance. With the rapid development of information science and technology, information computing has become the third approach of science research. Information computing and applications is the field of study concerned with constructing intelligent computing mathematical models, numerical solution techniques, and using computers to analyze and solve natural scientific, social scientific, and engineering problems. In practical use, it is typically the application of computer simulation, intelligent computing, internet computing, pervasive computing, scalable computing, trusted computing, autonomy-oriented computing, evolutionary computing, mobile computing, computational statistics, engineering computing, multimedia networking, and computing applications and other forms of computation problems in various scientific disciplines and engineering. Information computing and applications is an important underpinning for techniques used in information and computational science, and there are many unresolved problems that address worth studying.
