Marco Mainardi, Margherita Maffei, 2019-11-28 **Endothelial Biomedicine** William C. Aird, 2007-09-03 The endothelium the cell layer that forms the inner lining of blood vessels is a spatially distributed system that extends to all areas of the human body Clinical and basic research demonstrates that the endothelium plays a crucial role in mediating homeostasis and is involved in virtually every disease either as a primary determinant of pathophysiology or as a victim of collateral damage

The endothelium has remarkable though largely untapped diagnostic and therapeutic potential This volume bridges the bench to bedside gap in endothelial biomedicine advancing research and development and improving human health The book is the first to systematically integrate knowledge about the endothelium from different organ specific disciplines including neurology pulmonary cardiology gastroenterology rheumatology infectious disease hematology oncology nephrology and dermatology It s interdisciplinary approach which draws on expertise from such diverse fields as evolutionary biology comparative biology molecular and cell biology mathematical modeling and complexity theory translational research and clinical medicine

**The Brain and Host Defense** ,2009-12-24 It is now well recognized that the brain and especially the hypothalamus plays an important role in the regulation of immune reactions and inflammation This book aims to review our current state of knowledge of this important field Key historical findings are presented and the reciprocal interactions between the brain and the immune system are examined Particular emphasis is placed on inflammation a critical host defense reaction that serves as an effector response for both the adaptive and innate immune systems Mechanisms implicated in brain defense as well as in more general host defense are discussed The regulatory influences of the brain on inflammatory responses are included with particular reference to the role of the hypothalamus which is also the main director the hormonal regulation of immune inflammatory Gender related differences in immune responsiveness circadian modulator of immune responses and evidence that behavioral conditioning e g reward of immune responses is possible are used as examples to reinforce the notion that the neuroendocrine system exerts a fundamental and complex regulatory influence on the immune system Presents timely issues such as immunological aspects of the blood brain barrier and the role of inflammatory mediators in the evolution of strokes and degenerative diseases Includes analysis of the role of the brain in the adaptive responses to disease Evaluates the argument that further knowledge of the influence of the brain on the immune system will provide new insights to the pathophysiology infectious and autoimmune diseases

**Astrocytic-neuronal-astrocytic Pathway Selection for Formation and Degradation of Glutamate/GABA** Leif Hertz,Tiago B. Rodrigues,2014-04-30 Endocrinological research early recognized the importance of intercellular interactions and realized the importance of glutamatergic and GABAergic signaling In turn this signalling depends on elaborate interactions between astrocytes and neurons without which neurons would be unable to produce reuse and metabolize transmitter glutamate and GABA Details of these subjects are described in this Research Topic by key investigators in this field It focuses on the intricate and extremely swift pathway producing these amino acid transmitters from glucose in brain but also discusses difficulties in determining expression of some of the necessary genes in astrocytes and related processes in pancreatic islets However it does not discuss how closely associated astrocytes and neurons are anatomically enabling these interactions This is elegantly shown in this cover image kindly provided by Professor Andreas Reichenbach University of Leipzig Germany

*The Metabolic Syndrome:* Barbara C. Hansen,George A. Bray,2010-05-06 In the United States 40 to

45% of those over 60 years of age have the metabolic syndrome 1 2 3 and this percentage based on estimates of the increasing prevalence of excess body weight and the more comprehensive diagnostic criteria for the syndrome is likely to exceed 60% in newer survey analyses Children and adolescents too are being affected by the metabolic syndrome in parallel with the increasing prevalence of overweight in young people now estimated to include 16% of those age 6 to 19 years Clinicians see with increasing frequency that routine office visits demonstrate the metabolic syndrome a constellation of discrete but closely related metabolic disturbances indicative of increased risk for or presence of cardiovascular disease and or diabetes All estimates suggest the increasing impact of the metabolic syndrome on mortality and morbidity 4 Our aim in developing this new synthesis and analysis of the metabolic syndrome has been to bring together the viewpoints of the epidemiologists the physiologists the molecular biologists biochemists and the clinicians toward understanding the current state of knowledge of both the causes and the consequences of the metabolic syndrome These writers aim to stimulate new thinking concerning underlying mechanisms and to encourage heightened efforts to develop new therapeutics potentially targeting uniquely intersecting pathways or points of intervention This book is an extended call to action to slow or halt the rising tide of the metabolic syndrome 5
