Permutations Readings In Science And Literature:

Permutations Joan Digby, Bob Brier, 1985 Encyclopedia of Literature and Science Pamela Gossin, 2002-08-30 Science and literature have always been strange bedfellows Like puzzle pieces they fit because they're different Some of the greatest works of world literature have been inspired by the marvels of the scientific world Scientists have written works of the imagination Even formal scientific writings have been known to employ rhetoric There is a tendency to think of literature and the humanities in general as having little to do with science Yet scholars have conducted fruitful studies of the history and philosophy of science With the rise of technology scholars have also applied scientific analysis to the study of literature and the creative process The intersection of scientific and humanistic inquiry is finally being mapped This volume includes more than 650 A-Z entries on topics and themes in science and literature significant writers key scientists seminal works and important theories and methodologies This reference defines the rapidly emerging interdisciplinary field of literature and science An introductory essay traces the history of the field its growing reputation and the current state of research Broad in scope the volume covers world literature from its beginnings to the present day and illuminates the role of science in literature and literary studies A wide range of experts contributed entries to this volume each of which concludes with a brief bibliography The entire volume closes with a list of works for further reading Narrative Experiments Gayle L. Ormiston, Raphael Sassower, 1989-01-01 Attempts to show that traditional definitions of science and technology fail to capture the complex discursive construction of scientific knowledge Argues accompanied by many literary and philosophical examples that science technology and the humanities developed in concert with each other and that their reciprocal relationship transcends traditional disciplinary boundaries Cloth edition unseen 35 Annotation copyrighted by Book News Inc Portland OR **Inside Modernism** Thomas Vargish, Delo E. Mook, 1999-01-01 In this book a professor of literature and a physicist offer a broad new interdisciplinary account of Modernism Thomas Vargish and Delo E Mook encompass physics the visual arts and literature in a thought provoking analysis of the period from the 1880s to World War II Uncovering common structures and values underlying each of these disparate fields the authors define Modernism and its historical location between nineteenth century intellectual conventions that preceded it and the Postmodernism that followed Bridging boundaries that traditionally divide disciplines Vargish and Mook create a uniquely coherent and comprehensive view of the aesthetics and intellectual values that characterize the culture of Modernism **Cambridge Readings in the Literature of Science** Sir William Cecil Dampier Dampier, Margaret Dampier Dampier, 1924 **Enlightenment Borders** George Sebastian Rousseau, 1991 **Reading with the Senses in Victorian Literature and Science** David Sweeney Coombs, 2019-11-19 The nineteenth century sciences cleaved sensory experience into two separate realms the bodily physics of sensation and the mental activity of perception This division into two discrete categories was foundational to Victorian physics physiology and experimental psychology As David Sweeney Coombs reveals however it was equally important to

Victorian novelists aesthetes and critics for whom the distinction between sensation and perception promised the key to understanding literature's seemingly magical power to conjure up tastes sights touches and sounds from the austere medium of print In Victorian literature science and philosophy the parallel between reading and perceiving gave rise to momentous debates about description as a mode of knowledge as well as how and even whether reading about the world differs from experiencing it firsthand Examining novels and art criticism by George Eliot Thomas Hardy Vernon Lee and Walter Pater alongside scientific works by Hermann von Helmholtz William James and others this book shows how Victorian literature offers us ways not just to touch but to grapple with the material realities that Clifford Geertz called the hard surfaces of life

Scientific Writing and the College Curriculum Robert Charles Goldbort, 1989 *Annals of Scholarship*, 1986 **The New York Times Book Review**, 1985-07 Presents extended reviews of noteworthy books short reviews essays and articles on topics and trends in publishing literature culture and the arts Includes lists of best sellers hardcover and paperback

The Publishers' Trade List Annual, 1986 *Stephen Hawking's Universe* John Boslough, 1985 Here is an intimate glimpse of the greatest scientist of our day the brilliant physicist confined to a wheelchair whose *A Brief History of Time* has become the first worldwide scientific bestseller of the century The story of Stephen Hawking's relentless quest for the secret of the origins of the universe will change forever the way you look at the stars and your place among them **The Reprint Bulletin Book Reviews**, 1985 **Reprint Bulletin**, 1987 *Communicating Technology* Fred D. White, 1996 **Reprint Expediting Service Bulletin**, 1987 **Interface between Literature and Science** Victoria Carpenter, 2015-05-13 The boundaries of science and literature are permeable they are continuously crossed and illuminated by a variety of narrative forms and their interpretations Changes in our perception of the world are informed in equal measure by scientific and humanistic disciplines This volume treats both literary and scientific texts as products of the human mind therefore abiding by all the rules it creates scientific and humanistic alike The volume does not propose to replace all literary or discourse analysis with a cross disciplinary science based approach but rather uses this theoretical stance when more conventional means fail to explain or even explore the intricacies of a text It argues that scientific discourse can also be analysed through the prism of literary theories since all texts are governed in varying measure by the unity of contexts that characterize their nature the process of their creation and their place in the cognitive realm of humanity This approach will allow the nature and limitations of scientific research to be questioned while opening up more venues to explore scientific creativity that crosses the subject boundaries of science and humanities Latin American literature offers many examples of the interconnection between literary and scientific discourse Notwithstanding the often explored relationship between Jorge Luis Borges's literary themes and contemporary scientific discoveries a more general question should be asked is the influence of scientific thought a privilege of the select few or is it indeed an all pervading experience in Latin American literary narrative from late modernism to present day This book explores the texts that overtly incorporate scientific content or are structured

in such a way that immediately reminds the reader of a scientific phenomenon it will also examine the texts that are presented in such a way that a conventional literary analysis does not help penetrate the many narrative layers that the text comprises The volume offers cross disciplinary readings of such authors as Jorge Luis Borges Gabriel Garc a M rquez Ernesto S bato and Gustavo Sainz to name but a few **Poly** Lee Ballentine,1989 Appendix to the Journals of the House of Representatives of New Zealand New Zealand.
