**Discerning Characters** Christopher J. Lukasik, 2011-07-11 In this path breaking study of the intersections between

visual and literary culture Christopher J Lukasik explores how early Americans grappled with the relationship between appearance and social distinction in the decades between the American Revolution and the Civil War Through a wide range of evidence including canonical and obscure novels newspapers periodicals scientific and medical treatises and plays as well as conduct manuals portraits silhouettes and engravings *Discerning Characters* charts the transition from the eighteenth century's emphasis on performance and manners to the search for a more reliable form of corporeal legibility in the wake of the Revolution The emergence of physiognomy which sought to understand a person's character based on apparently unchanging facial features facilitated a larger shift in perception about the meanings of physical appearance and its relationship to social distinction The ensuing struggle between the face as a pliable medium of cultural performance and as rigid evidence of social standing Lukasik argues was at the center of the post Revolutionary novel which imagined physiognomic distinction as providing stability during a time of cultural division and political turmoil As Lukasik shows this tension between a model of character grounded in the fluid performances of the self and one grounded in the permanent features of the face would continue to shape not only the representation of social distinction within the novel but more broadly the practices of literary production and reception in nineteenth century America across a wide range of media The result is a new interdisciplinary interpretation of the rise of the novel in America that reconsiders the political and social aims of the genre during the fifty years following the Revolution In so doing *Discerning Characters* powerfully rethinks how we have read and continue to read both novels and each other

*The Face of Agamemnon* John Galway, 2013 This novel is based on a story related in the course of an interview conducted for a national Irish radio RTE programme in 1984 with the putative leader of the Estonian Resistance during World War II The man interviewed died about two years later leaving me a manuscript purporting to be the complete story Further research however opened up quite a different perspective from which a former lieutenant began to emerge as the main protagonist If his story could be verified which seemed impossible it would connect him with one of the great thefts of ancient art perpetrated during World War II It would also connect him with an international incident that severely strained relations between the Russian authorities and Germany in 1993 when a number of these stolen items were displayed in Moscow's Pushkin Museum

*AID Management : Strategic Management Can Help AID Face Current and Future Challenges* United States. General Accounting Office, 1992

*The Jepson Manual* Bruce G.

Baldwin, Douglas H. Goldman, 2012-01-31 California's extraordinary flora is described in contemporary detail in this handy volume which should prove an inspiration to all of those interested in these plants, their habitats, and their importance to a state richer in botanical diversity than any other part of the United States. This is a thorough revision of an indispensable book. Peter H. Raven, Missouri Botanical Garden. This second edition of *The Jepson Manual* is a monumental achievement. Far more than a simple update, the book has gone through a thorough revision, making it a must-have book for California plant enthusiasts, professional and lay alike. Lucinda McDade, Rancho Santa Ana Botanic Garden. Biogeographers, vegetation ecologists, and practitioners of conservation and restoration will all welcome the second edition of the *Jepson Manual*. Many improvements in this second edition include major taxonomic name changes, more information on habitat range, phenology, better keys, and new illustrations. The second edition is more user-friendly, accurate, and scientifically rigorous. And these improvements are exactly the kind of recent authoritative and trusted flora needed. Michael G. Barbour, University of California, Davis.

**Artists, Authors, Thinkers, Directors** Paul Hornschemeier, 2013-12-20 A self-portrait through one hundred portraits. *Artists, Authors, Thinkers, Directors* explores cartoonist Paul Hornschemeier's sketchbook renderings of those who shaped his and many others' artistic views. Culled from his drawing blog *The Daily Forlorn*, now one of Tumblr's featured illustration blogs, adding thousands of new followers every week, these portraits are as stylistically varied as the subjects they portray. A scrawled single line drawing of Lenny Bruce shares space with a triangular Werner Heisenberg. A monochromatic stippled Stanley Kubrick stares intently at a muppet-headed Frank Oz. Each turn of the page offers a new take on a familiar face. In the afterword, Hornschemeier includes brief notes on each portrait and that creator's particular work or insight that spoke specifically to him. And in that specificity, much of what is universally affecting in each creator shines through. Hornschemeier's graphic novels hop from one aesthetic to the next, varying the line and color quality to depict his narrative's mood. He plays with the language of comics. In these portraits, we can clearly see him hard at experimentation, adding to his vocabulary.

*Algorithms* Tetsuo Asano, 1990-08-02 This is the proceedings of the SIGAL International Symposium on Algorithms held at CSK Information Education Center, Tokyo, Japan, August 16-18, 1990. SIGAL, Special Interest Group on Algorithms, was organized within the Information Processing Society of Japan in 1988 to encourage research in the field of discrete algorithms and held 6-8 research meetings each year. This symposium is the first international symposium organized by SIGAL. In response to the call for papers, 88 papers were submitted from around the world. The program committee selected 34 for presentation at the symposium. The symposium also included 5 invited lectures and 10 invited presentations. The subjects of the papers range widely in the field of discrete algorithms in theoretical computer science. Keywords for these subjects are computational geometry, graph algorithms, complexity theory, parallel algorithms, distributed computing, and computational algebra.

**Facing the Other:  
Novel Theories and Methods in Face Perception Research** Davide Rivolta, Aina Puce, Mark A Williams, 2016-04-08

We rely heavily on faces during social interactions. Humans possess the ability to recognise thousands of people very quickly and accurately without effort. The serious social difficulties that follow abnormalities of the face recognition system, i.e. prosopagnosia, strongly underline the importance of typical face skills in our everyday life. Over the last fifty years, research on prosopagnosia along with research in the healthy population has provided insights into the cognitive and neural features behind typical face recognition. This has also been achieved thanks to non-invasive neuroimaging techniques such as functional Magnetic Resonance Imaging (fMRI), Electroencephalography (EEG), Magnetoencephalography (MEG), Diffusion Tensor Imaging (DTI), and Transcranial Magnetic Stimulation (TMS). However, there is still much debate about the cognitive and neural mechanisms of face perception. In the current Research Topic, we plan to gather experimental works, opinions, commentaries, mini reviews, and reviews that focus on new or novel theories and methods in face perception research. Where is the field at the moment? Do we need to re-think the experimental procedures we have adopted so far? Again, what kind of techniques or combination of them and analysis methods will be important in the future? From the experimental point of view, we encourage both behavioural and neuroimaging contributions, e.g. fMRI, EEG, MEG, DTI, and TMS. Despite the main emphasis on face perception, memory, and identification, we will also consider original works that focus on other aspects of face processing, such as expression recognition, attractiveness judgments, and face imagery. In addition, animal investigations and experimental manipulations that alter face recognition abilities in typical human subjects, e.g. hypnosis, are also welcome. Overall, we are proposing a Research Topic that looks at face processing using different perspectives and welcome contributions from different domains, such as psychology, neurology, neuroscience, cognitive science, and philosophy. The current Research Topic evolved over the desire to acknowledge the relatively recent loss of three giants in the field: Drs Shlomo Bentin, Truett Allison, and Andy Calder. We dedicate this Research Topic to them and their pioneering studies.
