Right On The Numbers:

Computability and Logic George S. Boolos, John P. Burgess, Richard C. Jeffrey, 2002-03-04 This fourth edition of one of the classic logic textbooks has been thoroughly revised by John Burgess The aim is to increase the pedagogical value of the book for the core market of students of philosophy and for students of mathematics and computer science as well This book has become a classic because of its accessibility to students without a mathematical background and because it covers not simply the staple topics of an intermediate logic course such as Godel's Incompleteness Theorems but also a large number of optional topics from Turing's theory of computability to Ramsey's theorem John Burgess has now enhanced the book by adding a selection of problems at the end of each chapter and by reorganising and rewriting chapters to make them more independent of each other and thus to increase the range of options available to instructors as to what to cover and what to defer
