Caouette, Edward I. Stowell, Ray L. Ison, Rosalind Armson, Jacky Holloway, Sue Jackson, Steve McRobb, 2013-11-11 The term sustainability has entered the lexicon of many academic disciplines and fields of professional practice but to date does not appear to have been seriously considered within the systems community unless perhaps under other guises Within the wider community there is no consensus around what sustainability means with some authors identifying 70 to 100 definitions of the term Some see sustainability as the precise

and quantifiable outcomes of biological systems whilst others see it in terms of processes relevant to personal and organizational change with the potential to effect changes in our relationships with our environments. Internationally it has been increasingly used in relation to the term sustainable development, a term popularised by the Brundtland Commission's report in 1987 entitled *Our Common Future*. Despite this diversity and polarised perception on its utility, unlike many other popular terms it has not had its time and subsided quietly from our language. It is therefore timely for the systems community to explore the relationship between systems and sustainability in a range of contexts. Participants in this the 5th International Conference of the United Kingdom Systems Society (UKSS) have been invited to reflect critically on the contribution of systems thinking and action to sustainability to the sustainability of personal relationships, the organizations in which we live and work and our natural environment.
